- Dr. Rae, in the spring of 1853, again proceeded towards the magnetic pole; and in July, 1854, he reported to the Admiralty that he had purchased from a party of Esquimaux a number of articles which had belonged to sir J. Franklin and his party—namely, sir John's star or order, part of a watch, silver spoons, and forks with crests, &c. He also reported the statement of the natives, that they had met with a party of white men about four winters previous, and had sold them a seal; and that four months later, in the same season, they had found the bodies of thirty men (some buried), who had evidently perished by starvation; the place appears, from the description, to have been in the neighbourhood of the Great Fish river of Back. Dr. Rae arrived in England on 22 Oct. 1854, with the relics, which were deposited in Greenwich hospital. He and his companions were awarded 10,000*l.* for their discovery. Dr. Rae, aged 30, died 22 July, 1893.
19. The *Phoenix*, *North Star*, and *Tulbot*, under the command of capt. Ingfield, sailed in May, and returned in Oct. 1854.
- Sir E. Belcher (No. 11), after mature deliberation, in April, 1854, determined to abandon his ships, and gave orders to that effect to all the captains under his command; and capt. Kellett gave similar orders to capt. M'Clure, of the *Investigator*.

The vessels had been abandoned 15 May\* when the crews of the *Phoenix* and *Tulbot* (under capt. Ingfield) arrived (19). On their return to England all the captains were tried by court martial and honourably acquitted 17-19 Oct. 1854.

Capt. Collinson's fate was long uncertain, and another expedition was in contemplation, when intelligence came, in Feb. 1855, that he had met the *Rattlesnake* (16) at Fort Clarence on 21 Aug. 1854, and had sailed immediately, in hopes of getting up with capt. Maguire in the *Plover* (1), which had sailed two days previously. Capt. Collinson having failed in getting through the ice in 1850 with capt. M'Clure, returned to Hong-Kong to winter. In 1851 he passed through Prince of Wales's Straits, and remained in the Arctic regions without obtaining any intelligence of Franklin till July, 1854, when, being once more released from the ice, he sailed for Fort Clarence, where he arrived as above mentioned. Captains Collinson and Maguire arrived in England in May, 1855.

20. The third AMERICAN expedition in search of Dr. Kane, in the *Advance*, consisted of the *Release* and the steamer *Arctic*, the barque *Erango*, and another vessel under the command of lieut. H. J. Hartstene, accompanied by a brother of Dr. Kane as surgeon 31 May, " [On 17 May, 1855, Dr. Kane and his party quitted the *Advance*, and journeyed over the ice, 1300 miles, to the Danish settlement; on their way home in a Danish vessel, they fell in with lieut. Hartstene, 18 Sept.; and arrived with him at New York, 11 Oct. 1855. Dr. Kane visited England in 1856; he died in 1857.]

The Hudson's Bay Company, under advice of Dr. Rae and sir G. Back, sent out an overland expedition, June 1855, which returned Sept. following. Some more remains of Franklin's party were discovered, "

21. The 18th British expedition (equipped by lady Franklin and her friends, the government having declined to fit out another)—the *Fox*, screw steamer, under capt. (since sir) F. L. M'Clintock, R.N. (see No. 11)—sailed from Aberdeen 1 July, 1857; returned 22 Sept. 1859.

On 6 May, 1859, lieut. Hobson found at Point Victory, near Cape Victoria, besides a cairn, a tin case, containing a paper, signed 25 April, 1848, by capt. Fitzjames, which certified that the ships *Erebus* and *Terror*, on 12 Sept. 1846, were beset in lat. 70° 50' N., and long. 98° 23' W.; that sir John Franklin died 11 June, 1847; and that the ships were deserted 22 April, 1848. Captain M'Clintock continued the search, and discovered skeletons and other relics. His Journal was published in Dec. 1859; and on 28 May, 1860, gold medals were given to him and to lady Franklin by the Royal Geographical Society.

Mr. Hall, the arctic explorer, reported, in Aug. 1865, circumstances that led him to hope that capt. Crozier and others were surviving.

A national monument by Noble, set up in Waterloo-place, was inaugurated, 15 Nov. 1866. It is inscribed to "FRANKLIN the great navigator and his brave companions who sacrificed their lives in completing the discovery of the north-west passage, A.D. 1847-8."

Sir John Franklin discovered the north-west passage by sailing down Peel and Victoria Straits, now named Franklin Straits.

\* Capt. Kellett's ship, the *Resolute*, was found adrift 1000 miles distant from where she was left, by a Mr. George Henry, commanding an American whaler, who brought her to New York. The British government having abandoned their claim on the vessel, it was bought by order of the American congress, thoroughly repaired and equipped, and entrusted to capt. H. J. Hartstene, to be presented to queen Victoria. It arrived at Southampton, 12 Dec. 1856; was visited by her majesty on the 16th; and formally surrendered on the 30th. When the ship was broken up a desk was made of the wood, and presented by queen Victoria to the president of the United States, 29 Nov. 1880.

Fredericksburg was bombarded by the federals and destroyed. On the 13th commenced a series of desperate unsuccessful attacks on the confederate works, defended by Generals Lee, Jackson, Longstreet, and others. General Hooker crossed the river with the reserves, and joined in the conflict, in vain. On 15 and 16 Dec. the federal army recrossed the Rappahannock. The battle was one of the most severe in the war.

**FREE CHURCH OF ENGLAND** (Evangelical). An Episcopal Church founded in 1844, and enrolled in her majesty's High Court of Chancery in 1863. See *Catechism*, 1899.

This church grew out of the Oxford tractarian movement of 1830. The first church was planted at Bridgetown, Devon, by the Rev. James Shore, M.A., curate of the parish; it was built by the Duke of Somerset, and opened in 1844. Two other churches were established in the same year—one at Exeter, and the other at

Ilfracombe. But it was not till 1849 that much progress was made, when an impetus was given to the movement by the late bishop of Exeter's (Philpott) prosecution of Mr. Shore, for preaching in his diocese without his licence. The work spread, and the organization was enrolled under a deed poll as an "Episcopal Church." But as "Consecration" could not be obtained a bishop president was elected till 1875, when the secession of the right rev. bishop Cummins from the "Protestant Episcopal Church of America" (the first bishops of which church were consecrated by the archbishop of Canterbury at Lambeth Palace chapel, in 1787), afforded an opportunity, which was embraced, of obtaining episcopal consecration for the bishops of the Free Church of England in the Canterbury line of episcopal succession.

The services of the F. C. E. are conducted on similar lines to those of the evangelical section of the national church, excepting the omission of some words in the offices which the F. C. E. consider express doctrines opposed to the Protestant Reformation.

**FREE CHURCH OF SCOTLAND** was formed by an act of secession of nearly half the body from the national church of Scotland, headed by Dr. Thos. Chalmers and other eminent ministers, 18 May, 1843. The difference arose on the question of the right of patrons to nominate to livings; see *Patronage*. The Free Church claims for the parishioners the right of a veto. Much distress was endured the first year by the ministers of the new church, although 366,719l. 14s. 3d. had been subscribed. In 1853 there were 850 congregations; in 1873, 954. A large college was founded in 1846. In 1856 the sustentation fund amounted to 108,638l. from which was paid the sum of 138l. each to 700 ministers.

the franchise at different periods. The more recent were, the act to regulate polling, 9 Geo. **FREEMASONRY.** Writers on masonry, themselves masons, affirm that it has had a being "ever since symmetry began, and harmony displayed her charms." It is traced by some to the building of Solomon's temple; and it is said the architects from the African coast, Mahometans, brought it into Spain, about the 9th century. A modern speculative cosmopolitan freemasonry with some analogies has essential differences from some early secret societies, and is not earlier than the seventeenth century. In 1717, the grand lodge of England was established; that of Ireland in 1730; and that of Scotland in 1736. Freemasons were excommunicated by the pope in 1738; again condemned, 30 Sept. 1865. Freemasons' Hall, Great Queen-street, London, built 1771; rebuilt, and consecrated 14 April, 1869. Partly burnt, 3 May, 1883. The duke of Sussex and the earl of Zetland were each twenty-five years grand-master of England. Earl de Grey, afterwards marquis of Ripon, was installed grand-master of the English freemasons in room of the earl of Zetland, 14 May, 1870. The marquis (on becoming a Romanist) resigned 1 Sept. 1874. He was succeeded by the prince of Wales; installed in the Royal Albert Hall, 28 April, 1875. The duke of Leinster, grand-master for Ireland for 60 years, died 10 Oct. 1874; succeeded by the duke of Abercorn. The prince of Wales was installed at Edinburgh as patron of the freemasons of Scotland, 12 Oct. 1870. As grand-master past and present of the mark masons, London, 8 Dec. 1883. **FREETHINKERS**, professors of natural religion; see *Deists*. Mr. John M. Robertson, in his "Short History of Freethought," published 1899, defines "Freethought" "as a revision or rejection of current religious doctrines by more or less practical people."

**FREE TRADE** principles, advocated by Adam Smith in his "Wealth of Nations" (1776), triumphed in England when the corn laws were abolished in 1846, and the commercial treaty with France was adopted in 1860. Richard Cobden, who was very instrumental in passing these measures, and termed "Apostle of Free Trade," died 2 April, 1865. Since 1830 the exports have been tripled. See *French Treaty*. An agitation for free trade existed in the United States. A reform league was formed at Boston, 20 April, 1869; and the movement became active in New York in Nov., and has since continued. A free-trade budget was brought in by the ministry in Sydney in 1873. A new free-trade league was inaugurated in London in Dec. 1873; and one at Melbourne, Australia, Sept. 1876; free trade union inaugurated, July, 1903; women's free trade union, 17 May, 1904; free food league formed, 13 July, 1904. Free trade warmly advocated in New South Wales, supported in New Zealand; opposed in Canada and in Victoria, Australia, 1877-80 (see *infra*). Much agitation against free-trade in 1880-2 and in 1903 *et seq.* See *Anti-Corn Law League, Fair Trade, and Preferential Tariffs*. American Free Trade League formed at Detroit, June, 1883. FRENCH LANGUAGE is mainly based on the rude Latin of the western nations subjugated by the Romans. German was introduced by the Franks in the 8th century. In the 9th the Gallo-Romanic dialect became divided into the *Langue d'oc* of the south and the *Langue d'oïl* of the north. The dialect of the Isle of France became predominant in the 12th century. The French language as written by Froissart assimilates more to the modern French, and its development was almost completed when the Académie Française (established by Richelieu in 1634) published a dictionary of the language in 1674. The French language, laws, and customs were introduced into England by William I., 1066. Law pleadings were changed from French to English in the reign of Edward III., 1362. *Stowe*. See *Drama*.

**FRENCH TREATY**, the term given to the treaty of commerce between Great Britain and France, signed 23 Jan. 1860, at Paris, by lord Cowley and Richard Cobden and by the ministers MM. Baroche and Rouher. The beneficial results of this treaty compensated for the depression of trade occasioned by the civil war in North America (1861-5). The French assembly determined that on 15 March, 1871, this treaty should cease in 12 months from that date. A fresh treaty was signed at Paris 29 Jan. 1873. Free trade was somewhat restricted, but the new French navigation law was relaxed. Negotiations for a new treaty began in London, 26 May, 1881. These islands were discovered by Tasman, in 1643; visited by Wallis, who called them Keppel Isles, 1767; and by captain Cook, who named them on account of the then friendly disposition of the natives, 1777. Pop. 1901, 20,672.

The isles were visited by missionaries in 1797; of whom the Wesleyans were most successful in conversions, 1820, cf. seq.

Many chiefs submitted to king George I. in 1825. He set up a constitution and summoned a parliament of 40 members in 1862. He concluded a treaty with Germany, 1 Nov. 1876; and with Great Britain, 29 Nov. 1879. His chief adviser, the rev. Shirley Baker, who had, it is stated, usurped and abused much power, was expelled by sir John B. Thurston, the British high commissioner of Fiji, and replaced by Mr. Basil Thomson, who published an account of the affair in 1895. Baker died Dec. 1903.

**FRIESLAND**: EAST (N. Germany), the ancient Frisia, formerly governed by its own counts. On the death of its prince Charles Edward, in 1744, it became subject to the king of Prussia: Hanover disputed its possession, but Prussia prevailed. It was annexed to Holland by Bonaparte, in 1806, to the French empire, 1810; and awarded to Hanover in 1815. The English language is said to be mainly derived from the old Frisian dialect.—**FRIESLAND**, WEST, in Holland, was part of Charlemagne's empire in 800. It passed under the counts of Holland about 936, and was one of the seven provinces which renounced the Spanish yoke in 1580. The term *Chevaux de Frise* (or *Cheval de Frise*, a *Friesland Horse*) is derived from Friesland, where it was invented.

**FRIULI** (Venetia), made a duchy by Alboin the Lombard, when he established his kingdom about 570. It was conquered by Charlemagne. Henri, a Frenchman, made duke, was assassinated in 799, which was the fate of duke Berengarius, king of Italy and emperor, in 924. The emperor Conrad gave the duchy to his chancellor Poppo, patriarch of Aquileia, in the 11th century; it was conquered by Venice in 1420; annexed to Austria, 1797; France, 1805; Austria 1814; Italy, 1866.

He returned to England, bringing with him a quantity of black ore, supposed to contain gold, which induced queen Elizabeth to patronise a second voyage. This led to a third fruitless expedition. He was mortally wounded at Brest, Nov. 1594.

**FRÉBEL SOCIETY**, see under *Kinder-garten*.

**FROGMORE**, near Windsor, Berks. A house here, built by Nash, was purchased by queen Charlotte 1800, and afterwards became a residence of the duchess of Kent. Here is situated the mausoleum of the late prince consort whose remains were transferred to it 1862. See *Albert*. Queen Victoria was buried here 4 Feb. 1901. The queen's

(Alexandra) memorial to queen Victoria, a statue of the Saviour, about 17 ft. high, sent from Denmark, erected at the royal mausoleum, 7 Nov. 1903.

**FROHSDORF**, a village 30 miles south of Vienna on the river Leitha, with a magnificent castle, which from 1844 to 1883 was the headquarters of the elder Bourbon party. The late comte de Chambord, who chiefly resided here, improved and beautified the interior of the castle.

**FROISSART'S CHRONICLE**, a history of the period between 1326 and 1400, treating chiefly of contemporary events in France, England, Scotland and Flanders, which are described in a vivid and interesting manner, with valuable information also on Spain, Italy and Germany. The first part of the Chronicle, the period 1326-56, is based on the writings of Jean le Bel, canon of Liège. Froissart (1327-1410), whose life was one of travel and adventure, was educated for and took orders in the church, but his inclination for poetry and gallantry led him to a roving life. He visited England in 1360, where his reputation of being a gay poet and narrator of chivalric deeds had preceded him, and became secretary to queen Philippa of Hainault, wife of Edward III., a post he held for some years; he revisited England in 1395, and spent some time at the court of Richard II. Among his various patrons was Wenceslaus duke of Brabant, whose poems, with certain pieces of his own, Froissart collected under the title of "Méliador, or the Knight of the Golden Sun;" this work was discovered in 1894. On the death of his patron, he entered the service of Guy, count of Blois, who presented him with the canonry of Chinay. About 1388 Froissart visited the comte de Foix, of whose court he gives a delightful description. He died at Chinay 1410. The earliest translation of the Chronicle is that of sir John Bourchier, lord Berners, 1525; Buchon edited the Chronicle, 1824-26; Johnes, 1803-5; and Luce 1869-88.

**FRONDE, CIVIL WARS OF THE**, in France, in the minority of Louis XIV. (1648-52), during the government of queen Anne of Austria and cardinal Mazarin, between the followers of the court and the nobility, and the parliament and the citizens. The latter were called *Frondeurs* (*slingers*), it is said, from an incident in a street quarrel. In a riot on 27 Aug. 1648, barricades were erected in Paris.

**FUENTES DE ONORO** (central Spain). On 2 May, 1811, Massena crossed the Agueda with 40,000 infantry, 5000 horse, and about 30 pieces of artillery, to relieve Almeida. He expected every

day to be superseded in his command, and wished to make a last effort for his own military character. Wellington could muster no more than 32,000 men, of which only 1200 were cavalry. He however determined to fight rather than give up the blockade of Almeida. After much fighting, on 3 May, night came on and stopped the conflict. Next day Massena was joined by Bessières with a body of the Imperial guard; and on 5 May, made his grand attack. In all the war there was not a more dangerous hour for England. The fight lasted until evening, when the lower part of the town was abandoned by both parties—the British maintaining the chapel and crags, and the French retiring a cannon-shot from the stream. *Napier*.

Furs of various kinds are now extensively worn. The chief supplies come from Siberia and N. America, chinchillas (the finest and most delicate of all furs) from S. America, opossum and kangaroo from Australia, and leopard skins from Africa. Europe produces large quantities of common furs, as those of the fox, hare, and rabbit. The principal fur companies are the Hudson Bay co., founded 1670, and the N. America Fur-sealing co., established 1890. Formerly the Skinners' company, one of the city guilds, possessed many privileges and rights connected with the trade in fur. These ancient rights are now in abeyance. Great fur sales are held periodically at Leipsig, and at Nijni Novgorod.

Our Edward III. termed Philip of Valois, who exacted the tax rigorously, the author of the *Salie* law (from *salt*, salt), 1340. The assessments were unequal, being very heavy in some provinces and light in others; owing to exemptions purchased from the sovereigns. The tax produced 38 millions of francs in the reign of Louis XVI. It was a grievous burden, and tended to hasten the revolution, during which it was abolished (1790).

Here pope Pius IX. took refuge, 24 Nov. 1848, and resided more than a year. Here also Francis II. of Naples, with his queen and court, fled when Garibaldi entered Naples, 7 Sept. 1860; and here he remained till the city was taken by the Sardinian general Cialdini, 13 Feb. 1861, after a severe siege, uselessly prolonged by a French fleet remaining in the harbour. Cialdini was created duke of Gaeta.

**GAGGING ACT**, properly so called, meant to protect the king and government from the harangues of seditious meetings, was enacted 8 Dec. 1795, when the popular mind was much excited. In Dec. 1819, soon after the Manchester affray, an act was passed for restraining public meetings and cheap periodical publications; it was popularly called "gagging bill." See *Six Acts*. Statutes coercing popular assemblies, particularly in Ireland, have been also so designated. See *Germany*, 1879. **GANDAMAK** (or **GUNDAMUK**), N. India. A treaty with Yakoub Khan, ameer of Afghanistan, was signed here by major Cavagnari, 26 May, 1879, principal articles, British to hold Khyber Pass, &c.

a British Resident to be at Cabul, annual subsidy of 60,000*l.* to the ameer, &c. The treaty was not carried out, see *Afghanistan*, Sept. 1879.

**GANESA**, the special deity of Prudence, in the worship of the Hindus, whose favour is invoked at the beginning of any enterprise; every book is inscribed with the name *Ganeshaya*, "honour to Ganesa." The god is represented with the head of an elephant, and riding upon a rat.

**GANGES**, the great sacred river of N. India, which rises in the S. Himalayas, receives several great rivers, divides into several branches, ending in the Bay of Bengal. The Ganges Canal, for irrigating the country between the Ganges and the Jumna. The main line (525 miles long) was opened 8 April, 1854. The immense difficulties in its execution were overcome by the skill and perseverance of its engineer, sir Proby Cautley. The lower Ganges canal, an extension of the above, commenced 1873.

**GANGS**, see *Agricultural Gangs and Hooliganism*.

**GANJA**, a preparation of the leaves, flowers and stem of the hemp plant (cultivated in Lower Bengal), largely consumed like opium; reported autumn, 1892.

**GAOL DISTEMPER**, see *Old Bailey*.

**GAOLS**, see *Prisons*.

**GARDEN CITIES** are designed to provide settlements for workpeople and others in healthy and open neighbourhoods where every hygienic safeguard is applied to the aggregation of an industrial population, so controlled that rural conditions may be associated with many of the conveniences of urban life. The earliest attempt to give practical effect to the idea was the foundation, in 1890, of the model village of Port Sunlight, on the Mersey, by Messrs. Lever Bros. In 1891 Mr. George Cadbury placed in trust an estate at Bournville, near Birmingham, for the benefit of future residents, and his own employes, for the erection of dwellings on the principle of building societies, a proviso being made that a certain area of land should be kept clear around each house in perpetuity. Mr. Ebenezer Howard first introduced the scheme for founding garden cities in his book, "To-Morrow," published in 1898. In 1889 the Garden City Association was formed, followed by the Garden City Pioneer Company, Ltd., in 1902, with a nominal capital of 20,000*l.*, Mr. Cadbury, Mr. Alfred Harmsworth (now baron Northcliffe), and Mr. H. W. Lever being among the first subscribers. This company was the pioneer of a larger undertaking, the Garden City Company, formed September, 1903, with a capital of 30,000*l.* An estate near Hitchen, of 3,818 acres, was secured at the cost of about 40*l.* per acre. There are two villages on the estate, and roads, water, and drainage works, gas works, and a railway station have been constructed; postal, banking, and other facilities have also been secured, and some 200 houses and cottages have already (1905) been erected. Several large manufacturers have selected sites for the erection of workmen's cottages on the removal of their works to the Garden City. *L'Association des Cités-Jardins de France*, on similar lines, was founded in France in 1904.

**GARDENERS' CHRONICLE**, a weekly paper, long edited by Dr. John Lindley, first appeared, 2 Jan. 1841.

**GARDENING.** The first garden, Eden, planted by God. *Gen.* ii. The Scriptures abound

with allusions to gardens, particularly the Song of Solomon and the prophets; and Christ's agony took place in a garden. Xenophon describes the gardens at Sardis; and Epicurus and Plato taught in gardens. Theophrastus's History of Plants was written about 322 B.C. Horace, Virgil, and Ovid derive many images from the garden (50 A.C. to A.D. 50); and Pliny's Tusculan villa is circumstantially described (about A.D. 100). The Romans introduced gardening into Britain, the religious orders maintained it, and its cultivation increased in the 16th century, when many Flemings came here to escape the persecutions of Philip II. Miller's dictionary was published in 1724; the Horticultural Society (*which see*) was established in 1804; Loudon's Encyclopædia of Gardening was first published in 1822, and his Encyclopedia of Plants in 1829; an act for the protection of gardens and ornamental grounds in cities was passed in 1863. See *Botany, Flowers, Fruits*. Gardeners' Royal Benevolent Institution, founded 1838. Schools of practical gardening for women are in successful operation at Swanley, Kent, and elsewhere. Exhibition of Gardening and Forestry at Earl's-court, Kensington, opened by the Duke of York, 13 May, closed, 14 Oct. 1803. School of practical gardening for boys established by the Technical Education board at the Royal Botanic Society, Regent's Park, early 1901.

**GARENGANZE.** See *Katanga*.

**GARIGLIANO**, a river (S. W. Italy). After long waiting and refusing to recede a step, the great captain Gonsalvo de Cordova made a bridge over this river, 27 Dec. 1503, and surprised and totally defeated the French army. Gaëta surrendered a few days after.

**GAROTTE**, a machine for strangling criminals, used in Spain. After five years' interval, a young woman, her lover, and an accomplice thus executed in Madrid for murder, 11 April, 1888. Many attempts to strangle made by thieves (termed "garotters") in the winter of 1862-3, led to the passing of an act in July, 1863, termed the "Garrotting Act," to punish these acts by flogging.

**GARTER, ORDER OF THE.** Edward III., when at war with France and eager to draw the best soldiers of Europe into his interest, projected the revival of king Arthur's round table, and proclaimed a solemn tilting. On New Year's day 1343-4, he published letters of protection for the safe coming and returning of such foreign knights as would venture their reputation at the jousts and tournaments about to be held. These took place 23rd April, 1344. A table was erected in Windsor castle of 200 feet diameter, and the knights were entertained at the king's expense. In 1346 Edward gave his garter for the signal of a battle that had been crowned with success (supposed to be Cressy), and being victorious on sea and land, and having David, king of Scotland, a prisoner, he, in memory of these exploits, is said to have instituted this order, 23 April, 1340. See *below*.

Edward III. gave the garter pre-eminence among the ensigns of the order; it is of blue velvet bordered with gold, with the inscription in old French—"Honi soit qui mal y pense" (Evil be to him who evil thinks). The knights are installed at Windsor, and styled *Equites aurei Pericelidis*, knights of the golden garter. *Beaton*.

The order until king Edward VI.'s time was called the order of St. George, the patron saint of England. His figure on horseback, presented as holding a spear, and killing the dragon, was first worn by the knights of the institution. It is suspended by a blue ribbon across the body from the shoulder

**GAS**, in chemistry, a permanently elastic æri-form fluid; see *Oxygen, Hydrogen, Nitrogen, Chlorine, Argon, Crypton, &c.*

It is stated that Monge and Clouet condensed sulphurous acid before 1800, and Northmore liquefied chlorine, 1805

Faraday determined a gas to be the vapour of a volatile liquid existing at a temperature considerably above the boiling point of the liquid; and that the condensing points of different gases are merely the boiling points of the liquids producing them; he by pressure condensed chlorine gas into a liquid, 1823

Other gases liquefied by intense cold and great pressure (as indicated by Faraday); oxygen by Cailletet, at Paris, 2 Dec., and independently by Raoul Pictet at Geneva, 22 Dec. 1877

**GATESHEAD**, a borough in Durham, on the Tyne, opposite Newcastle. At Gateshead-fell, William I. defeated Edgar Atheling and his Scotch auxiliaries in 1068. Gateshead was made a parliamentary borough by the reform act in 1832. Returns one member. Population, 1881, 65,803; 1891, 85,709; 1901, 109,887.

Between twelve and one o'clock, 5, 6 Oct. 1854, a fire broke out in a worsted manufactory here, which set fire to a bond warehouse containing a great quantity of nitre, sulphur, &c., causing a terrific explosion, felt at nearly twenty miles' distance, and totally destroying many buildings, and burying many persons in the ruins. At the moment of the explosion, large masses of blazing materials flew over the Tyne and set fire to many warehouses in Newcastle. About fifty lives were lost, and very many persons were seriously wounded. The damage was estimated at about a million pounds.

It was intended to discharge at once a number of projectiles smaller than the shells of field guns, and it had as many locks as barrels. Tried at Shoeburyness and rejected as inferior to a field gun firing shrapnel. A powder to be used in the Gatling, invented by M. Pertuiset, was tried in London, Aug. 1870.

**GAUGAMELA**, see *Arbela*.

**GAUGES** (in railways). Much discussion (termed "the battle of the gauges") began among engineers about 1833. Mr. I. M. Brunel approved of the broad gauge, adopted on the Great Western Railway; and Mr. R. Stephenson, Joseph Locke, and others, chose the narrow. A 2 foot gauge was recommended in Feb. 1870, having been successful on the Festiniog railway, Wales; with Robt. Fairlie's "bogge" engine was much adopted at home and abroad. About 200 miles of the S.W. lines of the Great Western were altered from the broad to the narrow gauge in a few days, June, 1874, and on 20-23 May, 1892, the broad gauge was totally superseded on the Great Western.

**GENEVA CONVENTION**, for the succour of the wounded in time of active warfare. Having been a witness of the horrors of the battle-field of Solferino, 24 June, 1859, M. Henri Dunant, a Swiss, published his experiences, which induced the *Société Gènevoise d'Utilité Publique* in Feb. 1863 to discuss the question whether relief societies might not be formed in time of peace to help the wounded in time of war by means of qualified volunteers. At an international conference held 26 Oct. 1863, fourteen governments, including Great Britain, France, Austria, Prussia, Italy, and Russia, were represented by delegates. The propositions then drawn up were accepted as an international code by a congress which met at Geneva, 8 Aug. 1864, and on 22 Aug. a convention was signed by twelve of the delegates, and it was eventually adopted by all civilised powers except the United States. International conferences were held at Paris in 1867 and at Berlin in 1869 for further developing in a practical manner the objects of the Geneva conference. The International Society (termed "the Red Cross Society"), established in consequence of these proceedings, was very energetic in relieving the wounded and sick during the Franco-Prussian war in 1870, its flag being recognised as neutral. See *Aid to*

**GENS-D'ARMES** were anciently the king's horse-guards only, but afterwards the king's *gardes-du-corps*; the musqueteers and light horse were reckoned among them. There was also a company of gentlemen (whose number was about 250) bearing this name. Scots guards were about the persons of the kings of France from the time of St. Louis, who reigned in 1226. They were organised as a royal corps by Charles VII. about 1441; the younger sons of Scottish nobles being usually the captains. The name *gens-d'armes* was afterwards given to the police; but becoming obnoxious, was changed to "municipal guard" in 1830.

**GENTLEMAN** (from *gentilis*, of a *gens*, a race or clan). The Gauls observing that during the empire of the Romans, the *seutarii* and *gentiles* had the best appointments of all the soldiers, applied to them the terms *écuyers* and *gentilshommes*. This distinction of gentlemen was much in use in England, and was given to the well-descended about 1430. *Sidney*. Gentlemen by blood were those who could show four descents from a gentleman who had been created by the king by letters patent.

**GENTLEMEN-AT-ARMS** (formerly styled the Band of Gentlemen Pensioners) is the oldest corps in England, with the exception of the Yeomen of the Guard. The band was instituted by Henry VIII. in 1509, and was originally composed entirely of gentlemen of noble blood, whom he named his pensioners or spears. William IV. commanded that it should be called his majesty's honourable corps of gentlemen-at-arms, 7 March, 1834.

**GENTLEWOMEN'S SELF-HELP INSTITUTION**, London, established by the earl of Shaftesbury, duchess of Sutherland, and others, May, 1870.

**GEODESY** (from *daiō*, I divide), the art of measuring the surface and determining the figure of the earth, &c. Col. A. Clarke's "Geodesy," published 1880. See *Latitude*.

The 7th international Geodetic congress met at Rome 15-24 Oct. 1883. It recommended the international unification of the hour, and longitude with Greenwich. An international conference of 40 delegates met at Washington, 1 Oct., president Adm. Rogers, agree to recommend Greenwich as prime meridian; France and Brazil abstain, 13 Oct. 1884; the terms of a universal day also agreed to, 1 Nov. 1884; at Berlin, 27 Oct. 1886; at Salzburg, 17 Sept. 1888; at Paris, 3 Oct. 1889; at Berlin, 30 Sept. 1895; Stuttgart, 3 Oct. 1898; Copenhagen, 4 Aug. 1903.

**GEOGRAPHY.** The first geographical records are in the *Pentateuch*, and in the book of Joshua. Homer describes the shield of Achilles as representing the earth surrounded by the sea, and also the countries of Greece, islands of the Archipelago, and site of Troy. *Iliad*. The priests taught that the temple of Apollo at Delphos was the centre of the world. Anaximander of Miletus was the inventor of geographical maps, about 568 B.C. Hipparchus attempted to reduce geography to a mathematical basis, about 135 B.C. Strabo, the great Greek geographer, lived 71-14 B.C. Ptolemy flourished about 139 A.D. The science was brought to Europe by the Moors of Barbary and Spain, about 1240. *Lenglet*. Maps and charts were introduced into England by Bartholomew Columbus to illustrate his brother's theory respecting a western continent, 1489. Geography is now divided into mathematical, physical, and political, and its study has been greatly promoted during the present century by expeditions at the expense of various governments and societies. The *Royal Geographical Society* of London was established in 1830; that of Paris in 1821. The Geographical Society's exhibition opened by the marquis of Lorne, 9 Dec. 1885. The society issued a circular for promoting a more uniform spelling of geographical names, Dec. 1891. The society instituted courses of lectures, Nov. 1892. Proposal that ladies be admitted as fellows; approved by letter-votes, 30 June; rejected by special meeting (172-153), 3 July, 1893. International Congresses are held. **GEOG. TEPE**, a strong Turkoman fortress; see *Russia*, 1879-81.

**GEOLOGY**, the science of the earth, is said to have been cultivated in China before the Christian era, and occupied the attention of Aristotle, Theophrastus, Pliny, Avicenna, and the Arabian writers.

In 1574 Mercati wrote concerning the fossils in the pope's museum: Casalpino Majoli, and others (1597), Steno (1669), Scilla (1670), Quirini (1676), Plot and Lister (1678), Leibnitz (1680) recorded observations, and put forth theories on the various changes in the crust of the earth.

Hooke (1668), in his work on Earthquakes, said that fossils, "as monuments of nature, were more certain tokens of antiquity than coins or medals, and though difficult, it would not be impossible to raise a *chronology out of them*."

Burnet's "Theory of the Earth" appeared 1690, Whiston's 1696; Hutton's "Theory of the Earth" 1795.

Buffon's geological views (1749) were censured by the Sorbonne in 1751, and recanted in consequence. The principle he renounced was that the present condition of the earth is due to secondary causes, and that these same causes will produce further changes. His more eminent fellow-labourers and successors were Gesner (1758), Michell (1760), Raspe (1762-73), Pallas and Horace B. de Saussure (1793-1800).

Werner (1775) ascribed all rocks to an aqueous origin, and even denied the existence of volcanoes in primitive geological times, and had many followers, Kirwan, De

Luc, &c.—James Hutton (1788), supported by Playfair, (1801) warmly opposed Werner's views, and asserted that the principal changes in the earth's crust are due to the energy of *fire*. The rival parties were hence termed *Neptunists* and *Vulcanists*.

Mr. (aft. sir) A. Geikie and other eminent modern geologists, ascribed the origin of the landscape features of the earth chiefly to denudation by the action of water, 1865 *et seq.* Sir A. Geikie's "Founders of Geology" [Jean Etienne Guettard, Desmarest, and others in the 18th century], published 1897.

William Smith, the father of British geology (who had walked over a large part of England), drew up a Tabular View of British Strata, in 1799, and published it and his Geological Map of England and Wales, 1812-15; died 28 Aug. 1839. The Rev. Adam Sedgwick, another father, died 27 Jan. 1873, aged 87. Sir Charles Lyell, died 22 Feb. 1875.

The rev. Wm. Buckland, D.D., born 1784; Reader in geology, Oxford, 1813; published "Reliquiæ Diluvianæ," the results of his examination of the fossil bones of large mammals, elephants, tigers, hyenas, &c., discovered in the Kirkdale cave, Pickering, Yorkshire, in 1821. "Geology and Mineralogy," in relation to natural Theology (Bridgewater Treatise), 1836. Dean of Westminster, 1846; died Aug. 1856.

In 1803 the Royal Institution possessed the best geological collection in London, collected by H. Davy, C. Hatchett, and others; the proposal of sir John St. Aubyn, sir Abraham Hume, and the right hon. C. F. Greville, to aid the government in establishing a school of mines there in 1804-7, was declined, 13 Nov. 1807.

In 1807 the *Geological Society of London* was established. By collecting a great mass of new facts, it greatly tended to check the disposition to theorise, and led to the introduction of views midway between those of Werner and Hutton.

The Geological Society of Dublin, 1832; of Edinburgh, 1834; of France, 1830; of Germany, 1848.

In 1835 Mr. (afterwards sir Henry) De la Beche suggested the establishment of the present *Museum of Geology*, which began at Craig's-court, and which was removed to its present position in Jernyn-street. To him are also due the valuable geological maps formed on the Ordnance survey. The building was erected by Mr. Pennefather, and formally opened by the prince consort, 14 May, 1851. Attached to the Museum are the Mining Records office, a lecture theatre, laboratories, &c. Sir H. De la Beche, the first director, died 13 April, 1855; succeeded by sir Roderick Murchison, who died 22 Oct. 1871; succeeded by professor (afterwards sir) A. C. Ramsay, March, 1872, died 9 Dec. 1891; by Archibald Geikie, 1881, knt., 1891. A similar institution founded at Calcutta in 1840.

A great many maps have been published, with memoirs. The survey of England, on the scale of an inch to a mile, was completed in Jan. 1824. Some maps have been made on a scale of six inches to a mile. The surveys of Scotland and Ireland are in progress.

New geological map of England and Wales, 4 miles to the inch, published by government, 1898.

International geological congress originated at the Buffalo meeting of the American association for the advancement of science in 1876.

The English standard works on geology at the present time are those of Lyell, Murchison, Phillips, De la Beche, Prestwich, Geikie, Dana, Jukes-Brown, Green, Judd, Page and Lapworth, Agassiz, Ramsay, and Nicholson.

Cuvier and Brongniart's work on Geology of Paris, 1808 *et seq.*

L. Agassiz, "Poissons Fossiles," 1833-45.

The strata composing the earth's crust may be divided into two great classes:

I. Those generally attributed to the agency of water;

## II. To the action of fire; which may be subdivided as follows:—

Aqueous formations, stratified, rarely crystalline:—  
Sedimentary or fossiliferous rocks.

Metamorphic or unfossiliferous.

Igneous formations, unstratified, crystalline:—

Volcanic, as basalt, &c.

Plutonic, as granite, &c.

Fossiliferous, or Sedimentary, rocks are divided into three great series:—  
The Palaeozoic (most ancient forms of life) or Primary.  
The Mesozoic (middle life period), or Secondary.  
The Neozoic or Cainozoic (more recent forms of life), or Tertiary.

GEOMETRY, so termed from its original application to measuring the earth, is ascribed to the Egyptians; the annual inundations of the Nile having given rise to it by carrying away the landmarks and boundaries.

St. George was a tribune in the reign of Diocletian, and being a man of great courage, was a favourite; but complaining to the emperor of his severities towards the Christians, and arguing in their defence, he was put in prison, and beheaded, 23 April, 300.—On that day, in 1192, Richard I. defeated Saladin.

The Order of the Sons of St. George, established at Philadelphia as a society to succour emigrants (see under *Emigration*). It gradually acquired political influence, and many branches were formed in order to counteract the dominant aggressive policy of the Irish party. It works in unison with the "British American association," which was formed to promote naturalization—its organ being the *British American*, a weekly newspaper, Dec. 1887.

**GEORGES' CONSPIRACY**, in France. General Moreau, general Pichegru, Georges Cadoudal, who was commonly known by the name of Georges, and others, were arrested at Paris, charged with a conspiracy against the life of Bonaparte, and for the restoration of Louis XVIII., Feb. 1804. Pichegru was found strangled in prison, 6 April. Twelve of the conspirators, including Georges, were executed 25 June, and others imprisoned. Moreau was exiled, and went to America. In 1813 he was killed before Dresden (*which see*).

**GEORGIA**, the ancient Iberia, now a province of S. Russia, near the Caucasus, submitted to Alexander about 331 B.C., but threw off the yoke of his successors. It was subjugated to Rome by Pompey, 65 B.C., but retained its own sovereigns. Christianity was introduced into it in the 3rd century. In the 8th century, after a severe struggle, Georgia was subdued by the Arab caliphs; by the Turkish sultan Alp-Arslan, 1068; and by the Tartar hordes, 1235. From the 14th to the 18th centuries, Georgia was successively held by the Persian and Turkish monarchs. In 1740 Nadir Shah established part of Georgia as a principality, of which the last ruler Heraclius, surrendered his territories to the czar in 1799; and in 1802 Georgia was declared to be a Russian province.—**GEORGIA, IN NORTH AMERICA**, was settled by gen. Oglethorpe, in 1732. Separating from the congress of America, it surrendered to the British, Dec. 1778; and its possession was of vast importance to the royalists in the war. Count d'Estatein joined the American general Lincoln, and made a desperate attack on Georgia, which failed, and the French fleet returned home; the colony was given up to the Union by the British in 1783. It seceded from the Union, by ordinance, 18 Jan. 1861, and was conquered by Sherman in 1864-5, and readmitted as a state Jan. 1868. A ridiculous negro insurrection suppressed Aug. 1875. **GERM THEORY OF DISEASE** supposes "that many diseases are due to the presence and propagation in the animal system of minute organisms [termed *microbes*] having no part or share in its normal economy." MacLagan, 1876. See *Animalcules* and *Bacteria*. Dr. Cohn, of Breslau, whose work was published in 1872, classifies bacteria as—I. Sphero or micrococci; II. Micro-bacteria, or bacteria proper (rod-shaped); III. Desmo-bacteria, the same but longer; IV. Spiro-bacteria, spiral-shaped or curly. Translation of his work, 1881. See *Cholera*.

The doctrine of *contagium animatum* was held in the middle ages and put forth in the 16th century, but contagious organisms were not discovered till the 19th by professors Pasteur, Tyndall, Dr. Wm. Budd, and others, 1875 *et seq.* At the British Association, 14 Sept. 1870, professor Huxley expressed his concurrence with the "germ theory." See under *Dust* and *Vivisection*, 1882.

Dr. Robert Koch is said to have identified the microscopical germs of cattle disease, of consumption, of cholera, and other diseases, 1875 *et seq.*, discredited in England, May, June, 1885. See *Tuberculosis*.

Dr. E. Klein, Feb. 1885, reported his investigations on the relation of bacteria to cholera. At the Royal Institution, May 27, 1887, he demonstrated the propagation of scarlet fever by microbes in cow's milk.

Numerous specimens of these germs were exhibited at the Royal Institution in illustration of professor Tyndall's discourse on "Living contagia," 16 Jan. 1885.

By taking means to exclude these germs from wounds, &c., sir Joseph Lister (baron 1897) introduced antiseptic surgery with great success, in which carbolic acid is largely used, 1864 *et seq.*; the protection of wounds from air is not now considered necessary.

"Louis Pasteur," by M. Radot, his son-in-law, gives an account of Pasteur's success in mitigating the virulence of some diseases by inoculation. A translation by lady Claud Hamilton was published in Feb. 1885. M. Pasteur's 70th birthday celebrated in Paris, &c. 27 Dec. 1892. He died, 28 Sept. 1895; see *Hydrophobia*.

Maj. R. Ross's paper at the Royal Colonial Institute on "Malaria and its treatment," he shows that three great laws had been established by science regarding malaria—(1) that it was caused by numbers of microscopical parasites, which live and propagate themselves in the blood; (2) that these parasites are carried from sick persons to healthy ones by the agency of a genus of mosquitoes called *Anopheles*; (3) that these kinds of mosquitoes breed principally in shallow and terrestrial waters, 10 Nov. 1903.

Bacillus of dysentery reported from Colombo to have been discovered by M. Costellani, 24 May, 1904.

Physiological action of the emanations of radium (*which see*) on various species of micro-organisms subjected to its influence, investigated by Dr. A. B. Green, shows a marked germicidal effect on the specific and extraneous micro-organisms of vaccine, 1904.

portion of Germany. In the latter part of the 8th century, Charlemagne subdued the Saxons and other tribes, and was crowned emperor at Rome, 25 Dec. 800. A list of his successors is given in another page. **GLASGOW, BISHOPRIC OF.** Kennet, in his *Antiquities*, says it was founded by St. Kentigern, *alias* Mungo, in 560: Dr. Heylin, speaking of the see of St. Asaph, in Wales, says that *that* see was founded by St. Kentigern, a Scot, then bishop of Glasgow, in 583. This prelate became archiepiscopal in 1491, ceased at the Revolution, and is now a post-revolution bishopric. The cathedral, commenced in 1121, has a noble crypt; see *Bishops*.

**GLASITES** (in Scotland) and **SANDEMANIANS** (in England). In 1727, John Glas, a minister of the church of Scotland, published "The Testimony of the King of Martyrs," concerning his Kingdom (*John xviii. 36*), in which he opposed national churches, and described the original constitution of the Christian church, its doctrines, ordinances, officers, and discipline, as given in the New Testament. Having been deposed in 1728, he and others established several churches formed upon the primitive models. The publication of a series of letters on Hervey's "Theron and Aspasio," by Robert Sandeman, in 1757, led to the establishment of churches in London and other places in England, and also in North America.

**GLASS.** The Egyptians are said to have known the art of making glass 1150 B.C. The discovery of glass took place in Syria. *Pliny*. Glass-houses were erected in Tyre. It was in use in the time of Tiberius; glass windows were used in Pompeii, Gregory of Tours speaks of church windows of coloured glass.

Glass is said to have been brought to England by Benedict Biscop, abbot of Wearmouth, in 674  
 The glass manufacture established in England at Crutched-friars, and in the Savoy (*Stow*) 1537

Great improvements have been made in the manufacture, through the immense increase of chemical knowledge in the present century. Professor Faraday published his researches on the manufacture of glass for optical purposes in 1839

The duties on glass, first imposed 1695; repealed, 1698; re-enacted, 1745; finally remitted, 24 April, 1845

**GLASS-PAINTING** was known to the ancient Egyptians. It was revived about the 16th century, and is described in the treatise by the monk Theophilus; was practised at Marseilles in a beautiful style, about 1500, and attained great perfection about 1530. Specimens of the 13th century exist in England; C. Winston's work is the best on the subject, 1846, new edition 1868

"Stained Glass Windows," by Lewis F. Day, published Nov. 1897

**GLASS-PLATE**, for coach-windows, mirrors, &c., made at Lambeth by Venetian artists, under the patronage of Villiers, duke of Buckingham 1673

Manufacture of British sheet glass introduced by Messrs. Chance, of Birmingham, about 1832

**Tempered or Toughened glass:** M. De la Bastie's process (plunging heated glass into a hot bath of oleaginous or alkaline compounds) announced, April, 1875; largely manufactured in France, and sold cheap in London 1876

Mr. Frederick Siemens described his process for producing strong homogeneous tempered glass at the Society of Arts 26 Feb. 1883

The application of glass for rails proposed by Mr. H. Lindsay-Bucknall and for railway sleepers proposed by Mr. F. Siemens, 1885-6. This glass asserted to be much stronger than iron.

The manufacture of Venetian glass probably introduced from Constantinople and perfected in the 15th and following centuries. Venetian glass is now manufactured at Venice and in England (1892) by Dr. Salvati; he presented a splendid glass vase to the queen on the anniversary of her coronation day, 28 June, 1892, see *Mosaics*.

Depression of English glass manufacture through the action of the trade union and foreign competition; reported, *Times* 31 Aug. 1896

Long-continued strike of glassmakers in the Stour-bridge district 1902-03

**GLASTONBURY** (Somerset), traditionally said to have been the residence of Joseph of Arimathea, and the site of the first Christian church in Britain, about 60. A church was built here by Ina about 708. The town and abbey were burnt, 1184, and an earthquake did great damage in 1275. Richard Whiting, the last abbot, who had 100 monks and 400 domestics, was hanged on Tor-hill in his pontificals for refusing to take the oath of supremacy to Henry VIII., 14 Nov. 1539. The monastery was suppressed 1540. Visit of pan-anglican bishops, 3 Aug. 1897. See *Lake Dwellings*, 1892.

**GLEBE** (*gleba*, a clod), the land belonging to a parish church, or ecclesiastical benefice.

An act to facilitate the sale of glebe land was passed in 1888.

Eminent composers, Samuel Webbe (1740-1816), Stevens, Calcott, Horsley, Danby, Paxton, Lord Mornington, Spofforth, &c. The *Glee Club*, founded by Dr. J. W. Calcott, Dr. Arnold, and others, 1877.

**GLENALMOND**, Perthshire. Trinity College here, projected in 1841, was opened in 1847. It was founded principally by the exertions of Mr. W. E. Gladstone and Mr. Hope Scott, aided by dean Ramsay, the duke of Buccleuch, the marquis of Lothian, and other gentlemen, to support the Scottish episcopal church. The site was given by Mr. George Patton, afterwards lord Glenalmond, 1846. The foundation-stone of a new wing was laid by Mr. W. E. Gladstone, 1 Oct. 1891. Trinity college much injured by fire; damage about 5,000*l.*, 10, again 18 Oct. 1894; Alan W. J. Ferguson, a pupil (mentally weak), charged with arson 27 Oct; confessed; sentence of 12 months' imprisonment. 24 Nov. 1894

**GLENCOE MASSACRE** of the Macdonalds, a Jacobite clan, for not surrendering before 1 Jan. 1692, the time stated in king William's proclamation. Sir John Dalrymple, master (afterwards earl) of Stair, their enemy, obtained a decree "to extirpate that set of thieves," which the king is said to have signed without perusing. Every man under 70 was to be slain. This mandate was treacherously executed by 120 soldiers of a Campbell regiment, hospitably received by the Highlanders, 13 Feb. 1692. About 60 men were slain; and many women and children, turned out naked in a freezing night, perished. This excited great indignation; and an inquiry was set on foot, May, 1695, but no capital punishment followed.

**GLENDALOUGH**, or "Seven Churches," an ancient Irish bishopric, said to have been founded by St. Keven in 498; united with Dublin, 1214.

**GLOBE**. The globular form of the earth, the five zones, some of the principal circles of the sphere, the opacity of the moon, and the true causes of lunar eclipses, were taught, and an eclipse predicted, by Thales of Miletus, about 640 B.C. Pythagoras demonstrated, from the varying altitudes of the stars by change of place, that the earth must be round; that there might be antipodes on the opposite part of the globe; that Venus was the morning and evening star; that the universe consisted of twelve spheres—the sphere of the earth, the sphere of the water, the sphere of the air, the sphere of fire, the spheres of the moon, the sun; Venus, Mercury, Mars, Jupiter, Saturn, and the spheres of the stars; about 506 B.C.—Aristarchus of Samos maintained that the earth turned on its own axis, and revolved about the sun, which doctrine was held by his contemporaries as so absurd that the philosopher nearly lost his life, 280 B.C.; see *Circumnavigators*.

To determine the figure of the earth, a degree of latitude has been measured in different parts of the world; by Bouguer and La Condamine in Peru, and by Maupertuis and others in Lapland, 1735. Estimated density  $\frac{5}{6}$  that of water; weight—6,000,000,000,000,000,000,000,000 tons.—*Proctor*, 1875. France and Spain measured by Mechain, Delambre, Biot, and Arago, between 1792 and 1821. Measurements made in India by col. (afterwards sir George) Everest, published in 1830. Experiments made by pendulums to demonstrate the rotation of the earth by Foucault in 1851; and to determine its density by Maskelyne, Bailly, and others; and in 1826, 1828, and 1854, by Mr. (aft. sir) G. B. Airy, the astronomer-royal.

**ARTIFICIAL GLOBES**. It is said that a celestial globe was brought to Greece from Egypt, 368 B.C., and that Archimedes constructed a planetarium about 212 B.C.

The globe of Gottorp, a concave sphere, eleven feet in diameter, containing a table and seats for twelve persons, and the inside representing the visible surface of the heavens, the stars and constellations, all distinguished according to their respective magnitudes, and being turned by means of curious mechanism, their true position, rising and setting, are shown. The outside is a terrestrial globe. The machine, called the globe of Gottorp, from the original one of that name, which, at the expense of Frederick II. duke of Holstein, was erected at Gottorp, under the direction of Adm. Olearius, and was planned after a design found among the papers of the celebrated Tycho Brahe. Frederick IV. of Denmark presented it to Peter the Great in 1713. It was nearly destroyed by fire in 1757; but it was afterwards reconstructed. *Coxe*.

The globe at Pembroke-hall, Cambridge, erected by Dr. Long (master, 1733), eighteen feet in diameter.

In 1851 Mr. Abrahams erected in Leicester-square, for Mr. Wyld, a globe 60 feet 4 inches in diameter, lit from the centre by day, and by gas at night. It was closed in July, 1861; the models were sold, and the building eventually taken down.

Mr. James Wyld, geographer to the queen, died 17 April, 1887.

**GLOBE THEATRE, BANKSIDE** (London), was built by agreement dated 22nd Nov. 1593; and licensed to Shakespeare and others; see *Theatres*, and *Shakespeare's Theatre*.—The Globe "Theatre," erected on the site of Lyon's-inn, Strand, was opened 28 Nov. 1868, Mr. Sefton Parry, manager; closed 1903.—The *Globe* evening newspaper; formerly whig, now conservative; established 1803. Special centenary number issued 8 Jan. 1903.

**GLOIRE**, French steam frigate, see *Navy*, *French*.

**GLORY**, the nimbus drawn by painters round the heads of saints, angels, and holy men, and the circle of rays on images, adopted from the Caesars and their flatterers, were used in the 1st century. The doxology, "*Gloria Patri*," is very ancient, and originally without the clause "as it was in the beginning," &c. In the Greek it began with "*doxa*," *glory*.

**GLOUCESTER** (Roman *Glevum*), submitted to the Romans about 45, and to the Saxons 577. The statutes of Gloucester, passed at a parliament held by Edward I. 1278, relate to actions at law. This city was incorporated by Henry III.; and was fortified by a strong wall, which was demolished after the Restoration, in 1660, by order of Charles II., as a punishment for the successful resistance of the city to Charles I., under col. Massey, Aug., Sept. 1643. The Gloucester and Berkeley canal was completed in April, 1827. Gross bribery took place here at the election for the parliament in 1859.—The *Bishopric* was one of the six erected by Henry VIII. in 1541, and was formerly part of Worcester. It was united to Bristol in 1836, but in 1884 an act was passed to provide for their again becoming separate bishoprics. The bishopric of Bristol reconstituted 7 July, 1897. The church, which belonged to the abbey, and its revenues, were appropriated to the maintenance of the see. The abbey, which was founded by king Wulphere about 700, was burnt in 1102, and again in 1122. In it are the tombs of Robert, duke of Normandy, and Edward II. In the king's books, this bishopric is valued at 315*l.* 17*s.* 2*d.* per annum. Present income, 5000*l.* Restoration of the cathedral, 1893-7; the lady chapel reopened 29 Sept. 1897.

**GLOVES.** Woodstock and Worcester leather gloves are of ancient celebrity. In the middle ages, the giving a glove was a ceremony of investiture in bestowing lands and dignities; and two bishops were put in possession of their sees by each receiving a glove, 1002. In England, in the reign of Edward II., the deprivation of gloves was a ceremony of degradation. The Glovers' company of London was incorporated in 1556. Embroidered gloves are presented to judges at maiden ussises. The importation of foreign gloves was not permitted till 1825. "Gloves and their Annals," by S. W. Beek, published in 1883.

**GLUCINUM** (from *glukus*, sweet). In 1798 Vauquelin discovered the earth *glucina* (so termed from the sweet taste of its salts). It is found in the beryl and other crystals. From glucina Wöhler and Bussy obtained the rare metal glucinum in 1828. *Gmelin*.

**GLUCOSE**, see *Sugar*.

**GLUTEN**, an ingredient of grain, particularly wheat, termed the *vegeto-animal principle* (containing nitrogen). Its discovery is attributed to Beccaria in the 18th century.

**GLYCERINE**, discovered by Scheele, about 1779, and termed by him the "sweet principle of fats," and further studied by Chevreul, termed the "father of the fatty acids." It is obtained pure by saponifying olive oil or animal fat with oxide of lead, or litharge. Glycerine is much employed in medicine and the arts, and in the manufacture of nitro-glycerine (*which see*), and other explosives.

**GLYOXYLINE** (invented by Mr. (aft. sir) F. A. Abel, the chemist of the war department, in 1867), an explosive mixture of gun-cotton, pulp and saltpetre saturated with nitro-glycerine. It was abandoned for compressed gun-cotton.

Among their teachers were Saturnius, 111; Basilides, 134; and Valentine, 140. Priscillian, a Spaniard, was burnt at Treves as a heretic, in 384, for endeavouring to revive Gnosticism.

This house was purchased by Louis XIV. about 1662, for a manufactory of works for adorning palaces (under the direction of Colbert), especially tapestry, designs for which were drawn by Le Brun, about 1666. Establishment (1878) cost about 8000*l.* a year.

**GOD SAVE THE KING.** This melody is said to have been composed by John Bull, Mus.D., in 1606, for a dinner given to James I. at Merchant Taylors' Hall; others ascribe it to Henry Carey, author of "Sally in our alley," who died, 4 Oct. 1743. It was much sung 1745-6. It has been claimed by the French. The controversy on the subject is summed up in Chappell's "Popular Music of the Olden Times" (1859). The melody has been adopted for the German national anthem ("Heil dir im Siegerkranz!"), and also for the Danish.

**GOLD** (mentioned *Gen.* ii. 11), the purest, and most ductile of all the metals, for which reason it has been considered by almost all nations as the most valuable. It is too soft to be used pure, and to harden it it is alloyed with copper or silver: our coin consists of twenty-two carats of pure gold, and two of copper. By 17 & 18 Vict. c. 96 (1854), gold wares are allowed to be manufactured at a lower standard than formerly;—wedding rings excepted, by 18 & 19 Vict. c. 60 (1855). The present standard price is 3*l.* 17*s.* 10*d.* per oz.; see *Coin of England, and Guineas*. In 1816, it was enacted by 56 Geo. III. c. 68, that "gold coins only should be legal tender in all payments of more than 40*s.*," the tender of silver being previously unlimited.

GOLDEN FLEECE (see *Argonauts*). Philip the Good, duke of Burgundy, in 1429, at his marriage, instituted the military order of "*Toison d'or*" or "golden fleece;" it was said on account of the profit he made by wool. The number of knights was thirty-one. The king of Spain, as duke of Burgundy, afterwards became grand master of the order. The knights wore a scarlet cloak lined with ermine, with a collar opened, and the duke's cipher, in the form of a B, to signify Burgundy, together with flints striking fire, with the motto "*Aste ferit, quam flamma micat*." At the end of the collar hung a golden fleece, with this device, "*Pretium non vile laborum*." The order afterwards became common to all the princes of the house of Austria, as descendants of Mary, daughter of Charles the Bold, last duke of Burgundy, who married Maximilian of Austria in 1477, and now belongs to both Austria and Spain, in conformity with a treaty made 30 April, 1725. The prince of Wales, the duke of York and other royal princes are knights (1895); president Faure, 1898; the duke of Connaught, 16 May, 1902; the shah of Persia, 6 Sept. 1902. A name given to a collection of the lives of our Lord, the Old Testament worthies, and many Christian saints, with much Bible narrative, compiled by Giacomo Varrigone, or Jacobus de Voragine, a Dominican monk, archbishop of Genoa, 1292-8. The work, which is of a very varied character, has afforded many subjects for poets and painters. A translation of "*The Golden Legend*," by William Caxton, was printed by him in 1483, and became very popular. Of this, an edition in 3 vols., 4to, edited by William Morris and F. E. Ellis, was published by Bernard Quaritch early in 1893.

**GONIOMETER**. An instrument for measuring solid angles, used in crystallography. The contact goniometer of Carangeau is generally employed. By the reflecting goniometer of Dr. Wm. Hyde Wollaston (who died in 1828) very minute crystals may be measured. Modifications of this instrument are now employed.

**GOOD FRIDAY** (probably God's Friday), the Friday before Easter day, on which a solemn fast has long been held, in remembrance of the crucifixion of Christ on Friday, 3 April, 33, or 15 April, 29. Its appellation of *good* appears to be peculiar to the church of England; our Saxon forefathers denominated it *Long Friday*, on account of the length of the offices and fastings enjoined on this day. See *Easter*.

Since 1841 the native regiments have been largely recruited by Goorkhas, who have rendered valuable service in nearly all our Indian wars, and in Afghanistan, 1878-9.

**GORDON'S "NO POPERY" RIOTS**, occasioned by the zeal of lord George Gordon, June 2-9, 1870.

On 4 Jan. 1870, he tendered the petition of the Protestant Association to lord North.

On Friday, 2 June, he headed the mob of 20,000 persons who assembled in St. George's Fields, under the name of the Protestant Association, to carry up a petition to parliament for the repeal of the act which granted certain indulgences to the Roman Catholics. The mob proceeded to pillage, burn, and pull down the chapels and houses of the Roman Catholics first, but afterwards of other persons, for nearly six days. The Bank was attempted, the gaols opened (the King's Bench, Newgate, Fleet, and Bridewell prisons). On the 7th, thirty-six fires were seen blazing at one time. At length, by the aid of armed associations of the citizens, the horse and foot guards, and the militia of several counties, then embodied and marched to London, the riot was quelled on the 8th.

210 rioters were killed and 248 wounded, of whom 75 died afterwards in the hospitals, and many were tried, convicted and executed.

The loss of property was estimated at 180,000*l.*

It is considered to be identical with the hairy people called *Gorillai* by the navigator Hanno, in his *Periplus*, about 400 B.C. In 1847 a sketch of a gorilla's cranium was sent to professor Owen by Dr. Savage, then at the Gaboon river, and preserved specimens have been brought to Europe, and a living one died on its voyage to France. In 1851 professor Owen described specimens to the Zoological Society; in 1859 he gave a summary of our knowledge of this creature at the Royal Institution, London; and in 1861 several skins and skulls were there exhibited by M. Du Chaillu (died 29 April, 1903), who stated that he killed 21 of them in his travels in Central Africa. The gorilla was not known to Cuvier.

A young gorilla landed at Liverpool, 21 June, 1876; went to Berlin; was exhibited at Westminster aquarium, 23 July; died at Berlin, 13 Nov. 1877; another brought to the Crystal Palace, England, soon died, Aug. 1879. An African gorilla landed at Liverpool, Sept. 1881. Another Sept. 1885.

**GOSPELS** (Saxon *god-spell*, good story). Matthew's and Mark's are conjectured to have been written between A.D. 38 and 65; Luke's 55 or 65; John's, about 97. Irenæus in the 2nd century refers to each of the gospels by name. Dr. Robert Bray was one of the authors of the Society for the Propagation of the Gospel in Foreign Countries, incorporated in 1701. A body termed "Bray's Associates," still exists; its object being to assist in forming and supporting clerical parochial libraries.

**GOTHENBURG SYSTEM** (in Sweden and Norway, about 1871). By this alcoholic drinks are dispensed by persons deriving no profit from the sale. It was advocated in England by Mr. Chamberlain, M.P., and much discussed, 1876-7. The bishop of Chester introduced a bill for establishing the system, read first time, 2 March, 1893; rejected by the lords, 6 June, 1893. The system advocated at a meeting at the Duke of Westminster's, 6 July, 1894. Much controversy ensued, 1894-95. See the bishop's letter, in *Times*, 15 Jan. 1895, and "Sober by Act of Parliament," by E. Goadby.

**GOTHIC ARCHITECTURE** began about the 9th century after Christ, and spread over Europe. Its great feature is the pointed arch; hence it has been suggested to call it the *pointed style*. "Gothic" was originally a term of reproach given to this style by the renaissance architects of the 16th century. Its invention has been claimed for several nations, particularly for the Saracens. The following list is from Godwin's Chronological Table of English Architecture:—

ANGLO-ROMAN—B.C. 55 to about A.D. 250—St. Martin's church, Canterbury.

ANGLO-SAXON—A.D. 800 to 1066—Earl's Barton church; St. Peter's, Lincolnshire.

Revival of Grecian architecture about 1645. Banqueting House, Whitehall, &c.

The revival of Gothic architecture commenced about 1825, mainly through the exertions of A. W. Pugin. The controversy as to its expediency was rife in 1860-7.

**GOTHLAND**, an isle in the Baltic sea, was conquered by the Teutonic knights, 1397-8; given up to the Danes, 1524; to Sweden, 1645; conquered by the Danes, 1677, and restored to Sweden, 1679. Mariestad almost entirely destroyed by fire, 5 Dec. 1895.

**GOTHS**, a warlike nation that inhabited the country between the Caspian, Pontus, Euxine, and Baltic seas. They entered Mœsia, took Philippopolis, massacring thousands of its inhabitants; defeated and killed the emperor Decius, 251; but were defeated at Naissus by Claudius, hence surnamed Gothicus, 320,000 being slain, 269. Aurelian ceded Dacia to them in 272; but they long troubled the empire. After the destruction of the Roman western empire by the Hæuli, the *Ostrogoths*, under Theoderic, became masters of the greater part of Italy, where they retained their dominion till 553, when they were finally conquered by Narses, Justinian's general. The *Visigoths* settled in Spain, and founded a kingdom, which continued until the country was subdued by the Saracens.

**GOTTHARD, ST.**, near the river Raab, Hungary. Here the Turks, under the grand vizier Kupruli, were totally defeated by the Imperialists and their allies, commanded by Montecuculi, 1 Aug.

**GÖTTINGEN** (Hanover), a member of the Hanseatic league about 1360. The university "Georgia Augusta," founded by George II. of England in 1734, was opened 1737. It was seized by the French, 1760, and held till 1762. In 1837 several of the most able professors were dismissed for their political opinions. Population, 1890, 23,693; 1900, 30,234.

**GOWRIE CONSPIRACY**. John Ruthven, earl of Gowrie, in 1600, reckoning on the support of the burghs and the kirk, conspired to dethrone James VI. of Scotland, and seize the government. For this purpose the king was decoyed into Gowrie's house in Perth, on 5 Aug. 1600. The plot was frustrated, and the earl and his brother, Alexander, were slain on the spot. At the time, many persons believed that the young men were rather the victims than the authors of a plot. Their father, William, was treacherously executed in 1584 for his share in the raid of Ruthven, in 1582; and he and his father, Patrick, were among the assassins of Rizzio, 9 March, 1566.

**GRAAL, HOLY** (Sangreal). The publication of Tennyson's poem "Holy Grail," Dec. 1869, led to much discussion. Tennyson treats it as the cup in which Christ drank at the Last Supper. The mediæval romances treat it as the dish which held the paschal lamb. The word is probably old French, *gréal*, from the old Latin *gradalis*, a dish.

**GRACE**, a title assumed by Henry IV. of England, on his accession, in 1399. *Excellent Grace* was assumed by Henry VI. about 1425. Till the time of James I. 1603, the king was addressed by that title, but afterwards by the title of *Majesty* only. "Your Grace" is the manner of addressing an archbishop and a duke in this realm.—The term "*Grace of God*" is said to have been taken by bishops at Ephesus, 431 (probably from 1 Cor. xv. 10), by the Carolingian princes in the 9th century, by popes in the 13th century; and about 1440 it was assumed by kings as signifying their divine right. "*Dei gratia*" was put on his great seal by William II. of England, and on his gold coin by Edward III. The king of Prussia's saying, that he would reign "by the grace of God," gave much offence, 18 Oct. 1861.

**GRACE AT MEAT**. The ancient Jews would not partake of any meat until they had first offered part of it, as the firstfruits, to their god. The short prayer said before, and by some persons after, meat in Christian countries is in conformity with Christ's example, *John vi. 11, &c.*

**GRAHAM'S DIKE** (Scotland), a wall built in 209 by Severus Septimus, the Roman emperor, or, as others say, by Antoninus Pius. It reached from the Firth of Forth to the Clyde. Buchanan relates that there were considerable remains of this wall in his time, and vestiges of it are still to be seen.

**GRAIN**. Henry III. is said to have ordered a grain of wheat gathered from the middle of the ear to be the original standard of weight: 12 grains to be a pennyweight; 12 pennyweights one ounce, and 12 ounces a pound Troy. *Lawsen*.

An act for the safe carriage of grain (43 & 44 Vict. c. 43) passed 7 Sept. 1880.

**GRAMMARIANS**. A society of grammarians was formed at Rome so early as 276 B.C. *Blair*. Apollodorus of Athens, Varro, Cicero, Messala, Julius Caesar, Nicias, Ælius Donatus, Remmius, Palemon, Tyrannion of Pontus, Athenæus, and other distinguished men, were of this class. A Greek grammar was printed at Milan in 1476; Lily's Latin grammar (*Brevis Institutio*), 1513; Lindley Murray's English Grammar, 1795; Cobbett's English Grammar, 1818.—Harris's *Hermes* was published in 1750, Horne Tooke's "*Epea Pteroenta*," or the "*Diversions of Purley*," in 1786, treatises on the philosophy of language and grammar. Cobbett declared Mr. Canning to have been the only purely grammatical orator of his time; and Dr. Parr, speaking of a speech of Mr. Pitt's, said, "We threw our whole grammatical mind upon it, and could not discover one error."

**GRAN** (Hungary). Here the Hungarians defeated the Austrians, 27 Feb. 1849.

**GRANADA**, a city, S. Spain, was founded by the Moors in the 8th century, and formed at first part of the kingdom of Cordova. In 1236, Mohammed-al-Hamar made it the capital of his new kingdom of Granada, which was highly prosperous till its subjugation by the "great captain," Gonsalvo de Cordova, 2 Jan. 1492, who is interred in the monastery of St. Geronimo. In 1609 and 1610 the industrious Moors were expelled from Spain by the bigoted Philip III., to the lasting injury of his country. Granada was taken by marshal Soult in 1810, and held till 1812. See *New Granada*. Granada is the seat of an archbishopric. The cathedral, begun in 1529, contains the tombs of Ferdinand and Isabella, and of Philip I. and his consort Juana. The university was founded 1531. Population, 1887: province, 484,638; city, 73,006; 1897, province, 477,768; city, 75,954.

In 1809 sir Humphry Davy investigated into the relations of three forms of carbon, the diamond, graphite, and charcoal. A rude kind of black-lead pencil is mentioned by Gesner in 1565. Interesting results of sir B. C. Brodie's researches on graphite appeared in the International Exhibition of 1862. Fresh discoveries were made in the nearly exhausted Borrowdale mines, Cumberland, in 1875.

Drawings were made on blocks of chalk with a silicious ink; when dried, the soft parts were brushed away, and the drawing remained in relief; stereotypes were then taken from the block. Now superseded by the zinc-type and other processes.

**GRATES**. The Anglo-Saxons had arched hearths, and chafing-dishes were in use until the introduction of chimneys about 1200; see *Chimneys*, and *Stores*.

**GRATTAN'S PARLIAMENT**, a name popularly given to the Irish parliament, after it had been declared independent, mainly by the exertions of Henry Grattan, by an act passed in England, May, 1782. It came to an end by the passing of the Act of Union, 2 July, 1800. In 1806, Grattan said of his parliament "I have a parental recollection. I sat by her cradle; I followed her hearse." **GRAVITATION**, as a supposed innate power, was noticed by the Greeks, and also by Seneca, who speaks of the moon attracting the waters, about 38. Kepler investigated the subject about 1615, and Hooke devised a system of gravitation about 1674. The principles of gravity were demonstrated by Galileo at Florence, about 1633; but the great law on this subject, laid down by Newton in his "Principia," in 1687, is said to have been proved by him in 1670. The fall of an apple from a tree in 1666 is said to have directed his attention to the subject. Newton says, "I do not anywhere take on me to define the kind or manner of any action, the causes or physical reasons thereof, or attribute forces in a true and physical sense to certain centres, when I speak of them as attracting, or endued with attractive powers." On 15 July, 1867, M. Chasles laid before the Paris Academy of Sciences some letters alleged to be from Newton to Pascal and others tending to show that to Pascal was due the theory of gravitation. The authenticity of these letters was authoritatively denied, and their forgery and his own delusion were acknowledged by M. Chasles before the academy 13 Sept. 1869.

**GREECE**, anciently termed *Hellas*. The name of *Græcia* first occurs in the writings of Aristotle (B.C. 384-322). Greece was so called from an ancient king, *Græcus*, and *Hellas* from another king, *Hellen*, the son of *Deucalion*. From *Hellen's* sons, *Dorus* and *Æolus*, came the *Dorians* and *Æolians*; another son *Xuthus* was father of *Achæus* and *Ion*, the progenitors of the *Achæans* and *Ionians*. Homer calls the inhabitants indifferently *Myrmidons*, *Hellenes*, and *Achæians*. They were also termed *Danaï*, from *Danaus*, king of *Argos*, 1474 B.C. Greece anciently consisted of the peninsula of the *Peloponnesus*, Greece outside of the *Peloponnesus*, *Thessaly*, and the islands. The principal states of Greece were *Athens*, *Sparta*, *Corinth*, *Thebes*, *Arcadia*, and afterwards *Macedon* (*all which see*). The limits of Modern Greece are much more confined. Greece became subject to the Turkish empire in the 15th century. The population of the kingdom, established in 1829, 968,810; in 1861, 1,096,810, with the *Ionian isles* (added in 1864), about 1,348,522; in 1870, 1,457,894; in 1879, 1,979,147; in 1889, 2,187,208; 1896, 2,433,806. The early history is mythic, and the dates purely conjectural.

been invented by Callinicus, an engineer of Helio-

Saracens' ships, which was effected by the general  
of the fleet of Constantine Pogonatus, and 30,000

carbon, was employed at the siege of Charleston,

**GREEN-BAG INQUIRY** took its name  
from a *Green Bag*, full of documents of alleged  
seditions, laid before parliament by lord Sidmouth,  
3 Feb. 1817. Secret committees presented their

**GREENLAND**, an extensive Danish colony  
in North America, discovered by Icelanders, under  
Eric Raude, about 980, and named from its verdure.  
It was visited by Frobenius in 1576, and by John  
Davis, 1585. The first ship from England to Green-  
land was sent for the whale-fishery by the Muscovy  
company, 2 James I. 1604. In a voyage performed  
in 1630, eight men were left behind by accident,  
who suffered incredible hardships till the following  
year, when the company's ships brought them home.

been since established. Scoresby surveyed Greenland  
in 1821; and captain Graah, by order of the king of  
Denmark, in 1829-30. Population in 1878, about

Dr. Fridtjof Nansen, Mr. Sverdrup, and two other  
Norwegians and two Lapps wearing snow shoes crossed  
Greenland from E. to W., amid great hardships, 17 July  
et seq. 1888, and arrived at Copenhagen, 21 May, 1889.  
Dr. Nansen described his journey across Greenland at a

**GREENOCK** (W. Scotland). Charters were  
granted in 1635 to John Shaw, and 1670 to his  
son sir John, of the barony of Greenock. It was a

fishing station till 1697, when the Scottish Indian and African company resolved to erect salt-works in the Firth, and thus drew the attention of sir John Shaw, its superior, to its maritime advantages. It was made a burgh of barony in 1757, and a parliamentary burgh in 1832. The erection of the new quay was entrusted, about 1773, to James Watt, who was born here in 1736. SECOND GRENVILLE ADMINISTRATION, formed after the death of Mr. Pitt, on 23 Jan. 1806. From the ability of many of its members, their friends said it contained "all the talents, wisdom, and ability of the country," a term applied to it derisively by its opponents. The death of Mr. Fox, 13 Sept. 1806, led to changes, and eventually the cabinet resigned, 25 March, 1807.—

**GRESHAM COLLEGE** (London), established by sir Thomas Gresham in 1575, founder of the Royal Exchange. He left a portion of his property in trust to the city and the Mercers' company to endow this college for lectures in divinity, astronomy, music, geometry, civil law, physics, and rhetoric; he died 21 Nov. 1579. The lectures commenced in Gresham's house, near Broad-street, June, 1597 (where the founders of the Royal Society first met in 1645). The buildings were pulled down in 1768, and the Excise office erected on its site, the property having been acquired by the crown for an annuity of 500*l*. The lectures were then read in a room over the Royal Exchange for many years. On the rebuilding of the exchange, the Gresham committee erected the present building in Basinghall-street, which was designed by G. Smith, and opened for lectures, 2 Nov. 1843. It cost above 7000*l*. In 1871 the college acquired a valuable collection of books and pictures, bequeathed by Mrs. Hollier. Changes respecting the lectures were advocated in 1875, and some made in 1876.

The amalgamation of the university teaching extension society advocated by Mr. Goschen, 15 Oct. 1888.

The proposal to make the college a teaching university for London was referred to a royal commission, March. Earl Cowper, chairman; first meeting, see *London University*, 1894. 30 June, 1892. Sir Evelyn Wood opens the new Gresham school buildings (cost 40,000*l*. at Holt, Norfolk, 30 Sept. 1903).

**GRETNA GREEN** (Dumfries, S. Scotland, near the border). Here runaway marriages were contracted for many years, as Scots law ruled that an acknowledgment before witnesses made a legal marriage. John Paisley, a tobaccoist, and termed a blacksmith, who officiated from 1760, died in 1814. His first residence was at Megg's hill, on the common or green betwixt Greta and Springfield, to the last of which villages he removed in 1782. A man named Elliot was afterwards the principal officiating person. The general assembly, in 1826, in vain attempted to suppress this system; but an act of parliament, passed in 1856, made these marriages illegal after that year, unless one of the persons married had lived in Scotland 21 days.

The bishop of Southwark founded the sisterhood, and their first house was dedicated by Dr. Randall Davidson, then bishop of Rochester, 2 Feb. 1893. **GUILLOTINE**, an instrument for causing immediate and painless death, named after its supposed inventor, a physician named Joseph Ignatius Guillotin. In 1866 M. Dubois, of Amiens, stated that the idea only was due to Guillotin, who at a meeting of the legislative assembly in 1789 expressed an opinion that capital punishment should be the same for all classes. Accordingly, at the request of the assembly, M. Louis, secretary of the "Académie de Chirurgie," submitted to it on 20 March, 1792, a mode of capital punishment, "sure, quick, and uniform," which he had invented. The first person executed by it was a highway robber named Pelletier, on 25 April; and Dancremont was its first political victim, 21 Aug. following. Guillotin died in 1814. The guillotine at Paris was burnt by the communist insurgents, 7 April, 1871. **GUN**, see *Artillery*, *Cannon*, *Fire-arms*.—**GUN-CLUB**, for pigeon-shooting, founded by sir Gilbert East in 1862.

**GUN-COTTON**, a highly explosive substance, invented by professor Schönbein, of Basel, and made known in 1846. It is purified cotton, steeped in a mixture of equal parts of nitric acid and sulphuric acid, and afterwards dried, retaining the appearance of cotton wool. See *Collodion*. Its nature was known to Braconnot and Pelouze.

The diet of Frankfurt voted, 3 Oct. 1846, a recompense of 100,000 florins to professor Schönbein and Dr. Boettger, as the inventors of the cotton powder, provided the authorities of Mayence, after seeing it tried, pronounced it superior to gunpowder as an explosive.

Improvements were made in the manufacture of gun-cotton by an Austrian officer, Baron von Lenk, about 1852, and it was tried by a part of the Austrian army in 1855, but did not obtain favour.

In 1862 details of the manufacture were communicated by the Austrian government to our own government, and Mr. (late sir Frederick) Abel, our war-office chemist, was directed to experiment on the constitution and desirability of gun-cotton. The British Association also appointed a scientific committee to consider its merits. A complete decision was not arrived at.

The first trial of English-made gun-cotton was made in the spring of 1864, at the manufactory at Stowmarket, Suffolk, by Messrs. Prentice.

There was manufactured, by a company, the "patent safety gun-cotton," according to Mr. Abel's patent (including the pulping, compressing, and wet processes), based on researches commenced in 1866. The cotton was said to be explosive by detonation, and not by ignition. A great explosion took place at Stowmarket; 24 persons were killed (including A. E. H. and W. R. Prentice, managers); about 60 were dreadfully wounded, and nearly the whole town was destroyed as if by a bombardment, 11 Aug. 1871.

The verdict at the inquest attributed the explosion to the culpable "addition of sulphuric acid to the gun-cotton subsequent to its passing the tests required by government," 6 Sept. 1871.

A government commission, appointed in Sept. to consider the manufacture and use of gun-cotton, reported in favour of both, with special regard to compressed gun-cotton, 13 Dec. 1871.

Another report recommended this gun-cotton to be stored wet, with drying apparatus near; and to be kept in slighter boxes, 25 July, 1872.

Mr. E. O. Brown, of the war department, Woolwich, discovers that wet gun-cotton can be exploded by concussion by a detonating fuse, about Nov. 1872.

It is used as an explosive agent in mining, &c.

**GRN-CLOTTE**, made on a similar principle, was patented by Mr. W. A. Dixon, about 1866.

**GUNPOWDER.** The invention of gunpowder is generally ascribed to Bertholdus or Michael Schwartz, a Cordelier monk of Goslar, south of Brunswick, in Germany, about 1320. But many writers maintain that it was known much earlier in various parts of the world. Some say that the Chinese and Hindoos possessed it centuries before. Its composition, moreover, is expressly mentioned by Roger Bacon, in his treatise *De Nullitate Magie*. He died in 1292 or 1294. Various substitutes for gunpowder have been invented, such as the white gunpowder of Mr. Horsley and Dr. Ehrhardt, and gun-paper by Mr. Hochsteden. A new gunpowder by M. Newmayer, of Toya, near Leipzig, was discussed in Nov. 1866. "Pellet gunpowder" was ordered to be used in gun-charges in the army, March, 1868. An act to amend the law concerning the making, keeping, and carriage of gunpowder, &c. was passed 28 Aug. 1860, and other acts since. See *Birmingham*, 1870. In May, 1872, a company was formed to manufacture Mr. R. Punshon's patent cotton-gunpowder, asserted to be very safe and controllable. The manufacture of the German "brown" or "cocoa" powder was set up at Chilworth in Surrey, 1886. See *Chronoscope*.

The use of gunpowder was denounced by Ariosto, 1516; by Jean Marot, 1532; by Cervantes, 1604; termed "villanous salt-petre" by Shakespeare, about 1598.

**ENGLISH WAR GUNPOWDER:** 75 parts nitrate of potash (saltpetre); 10 sulphur; 15 carbon. These proportions may be slightly varied.

W. Hunter, after a careful examination of the question, in 1847, thus states the result:—"July and August, 1846, may be safely assumed to be the time when the explosive force of gunpowder was first brought to bear on the military operations of the English nation."

Above 11 tons of gunpowder on board the *Lottie Sleigh*, in the Mersey, exploded; much damage done in Liverpool and Birkenhead, but no lives lost, 16 Jan. 1864.

About 104,000 lbs. of gunpowder exploded at the Belvedere powder magazines of Messrs. Hall & Co., at Plumstead, near Woolwich; 13 persons perished, and the shock was felt at 50 miles distance, 1 Oct. 1864. Searching inquiries were made into the circumstances, and new regulations for the keeping and transmission of powder issued in November; see *Dartford*.

Mr. Gale, a blind gentleman of Plymouth, on 22 June, 1865, patented his method of rendering gunpowder unflammable by combining with it finely powdered glass, which can be readily separated by a sieve when the powder is required for use. Successful public experiments were made.

Mr. Gale exhibited his process before Queen Victoria at Windsor, 10 Nov. 1865, and it was severely tested at a martello tower, near Hastings, 30 June, 1866. The attainment of perfect security was still doubtful. Gale's Protected Gunpowder company was formed, Oct. 1865, and wound up, March, 1867.

Great explosion at Messrs. Hall's powder-mills, near Faversham; 11 men killed, much damage done; shock felt at Canterbury, 10 miles off, 28 Dec. 1867. Another explosion about 21 Dec. 1868.

Milner's powder-magazines placed in fire at Woolwich arsenal and found secure, 8, 9 Oct. 1872.

About 5 tons of gunpowder in barrels exploded in the barge *Tilbury*, on the Regent's canal, near the North Bridge-gate, Regent's-park, nearly 5 A.M. 2 Oct. 1874. Three men on the barge killed; shock felt about 30 miles off; destruction extended over about a square mile; some houses thrown down; very many windows blown in; the house of Mr. Alma-Tadema, the artist, much injured.

The powder was sent by Pigou and Wilks to Derbyshire for blasting purposes. 6333l. had been subscribed for the sufferers up to 1 May, 1875.

**Verdict of Inquest**—Explosion caused by ignition of vapour from benzoline by a fire or light in the cabin of the barge *Tilbury*. The Junction Canal company guilty of gross negligence, and the present laws inadequate for public safety, 19 Oct. 1874.

The company declared responsible on trial (by Capt. Jackson), 14 May, 1875.

One thousand and fifty-four claims had been settled for 63,660l., June, 1876.

Recently smokeless gunpowder has been produced; the Duttonhofer, the Stein, the Fallina, the Schults and Hengst, Chilworth and Lebel powders give very little smoke, 1888-9.

The smokeless gunpowder of Herr Falkenstein tried at Berlin, reported efficient, Aug. 1889.

Sir F. A. Abel, in a discourse at the Royal Institution, 31 Jan. 1890 (*Proceedings*, vol. XIII.), explained and illustrated the merits and demerits of "smokeless explosives." Smokeless gunpowder much used in the autumn manoeuvres, 1890.

Gunpowder exported: 1876, 14,268,672 lbs.; 1880, 14,927,500 lbs.; 1890, 10,330,400 lbs.; 1896, 8,089,000 lbs.; 1901, 6,865,712 lbs.; 1904, 6,553,456 lbs.

**GUNPOWDER PLOT**, for springing a mine under the houses of parliament, and destroying the king, lords, and commons there assembled, was discovered on 4 Nov. 1605. It was projected by Robert Catesby early in 1604, and several Roman catholics of rank were in the plot. Guy Faux was detected in the vaults under the house of lords, hired for the purpose, preparing the train for being fired on the next day. Catesby and Percy (of the family of Northumberland) were killed at Holbeach house, whither they had fled, 8 Nov.; and Guy Faux, sir Everard Digby, Rookwood, Winter, and others, were executed, 30, 31 Jan. 1606. Henry Garnet, a Jesuit, suffered as an accomplice, 3 May following. An anonymous letter sent to lord Montague led to the discovery. It contained the following words, "Though there be no appearance of any stir, yet I say they shall receive a terrible blow this parliament, and yet they shall not see who hurts them." The vault called Guy Faux cellar, in which the conspirators lodged the barrels of gunpowder, remained till 1825, when it was converted into offices. "What Gunpowder plot really was," an answer to Father Gerard (who expressed his belief that the story of the plot was fabricated by lord Salisbury, the minister of James I., for his own purposes), by prof. S. K. Gardiner, published, July, 1897. The vaults are searched with much ceremony at the opening of each session of Parliament.

De Almeida and Montgomery, at the Society of Arts, in 1843. As a non-conductor of electricity it is invaluable in constructing submarine telegraphs, an application suggested by Faraday and Werner Siemens independently, 1847. 70,176 cwts. were imported into the United Kingdom in 1890; 40,490 cwts. 1893; 126,059 cwts. 1900; 288,535 cwts. 1904.

**GUY'S HOSPITAL** (London). Thomas Guy, a wealthy bookseller, after bestowing large sums on St. Thomas's, determined to found a new hospital. At the age of seventy-six, in 1721, he commenced the present building, and lived to see it nearly completed. It cost him 18,793*l.*, and, in addition, he endowed it with 219,499*l.* In 1829, 196,115*l.* were bequeathed to this hospital by Mr. Hunt, to provide accommodation for 100 additional patients.

**GUZERAT**, a state in India, founded by Mahmud the Gaznevide, about 1020, conquered by Akbar in 1572; became subject to the Mahrattas 1732 or 1752. At the battle of Guzerat, near the Chenab, in the Punjab, 21 Feb. 1849, Lord Gough totally defeated the Sikhs and captured the town of Guzerat.

**GWALIOR**, an ancient state in Central India, occupied by the Mahrattas, since 1803, under British protection. **GYMNASIUM**, a place where the Greeks performed public exercises, and where philosophers, poets, and rhetoricians repeated their compositions. In wrestling and boxing the athletes were often naked (*gymnos*), whence the name. A London gymnastic society, formed in 1826, did not flourish. In 1862, M. Ravenstein set up another gymnastic association. The German Gymnastic Institution, in St. Pancras-road, London, was opened on 29 Jan. 1865, and a large and perfect gymnasium at Liverpool was inaugurated by Lord Stanley, 6 Nov. 1865. A London athletic club existed in Nov. 1866. Since then gymnastics have been much cultivated. An international athletic congress opened in Paris, 16 June, 1894.

**GYMNOSOPHISTÆ**, a set of naked philosophers in India. Alexander (about 324 B.C.) was astonished at the sight of men who seemed to despise bodily pain, and endured tortures without a groan. *Pliny*.

**GYPSIES, GIPSIES, or EGYPTIANS** (French, *Bohémiens*; Italian, *Zingari*; Spanish, *Gitanos*; German, *Zigeuner*); vagrants, supposed to be descendants of low-caste Hindoos expelled by Timur, about 1399. They appeared in Germany and Italy early in the 15th century, and at Paris in 1427. In England an act was made against their itinerancy, in 1530; and in the reign of Charles I. thirteen persons were executed at one assizes for having associated with gypsies for about a month. The gypsy settlement at Norwood was broken up, and they were treated as vagrants, May, 1797. There were in Spain alone, previously to 1800, more than 120,000 gypsies, and many communities of them yet exist in England. Notwithstanding their intercourse with other nations, their manners, customs, visage, and appearance are almost wholly unchanged, and their pretended knowledge of futurity gives them power over the superstitious. Esther Faa was crowned queen of the gypsies at Blyth, on 18 Nov. 1860. The Bible has been translated into gypsy dialects. Gypsy parliaments are occasionally held. George Smith, king of the gypsies, Falcon hall, Edinburgh, protested against the Movable Dwellings bill, 10 Jan. 1891. The Gypsy Lore society, founded in 1888, had 70 members in 1891, and published a journal.

GEORGE BORROW fraternised with the gypsies, and wrote several works describing his adventures, especially "The Zincali" (1841); "The Bible in Spain" (1842); "Lavengro" (1850); and a "Dictionary of the Gypsy Language" (1874). He was born in 1803, and died in Aug. 1881.

**GYROSCOPE** (from *gyrere*, to revolve), the name of a rotatory apparatus invented by Fessel of Cologne (1852), and improved by professor Wheatstone and M. Foucault of Paris. It is similar in principle to the rotatory apparatus of Bohnenberger of Tübingen (born 1765, died 1831).—The gyroscope, by exhibiting the combined effects of the centrifugal and centripetal forces, and of the cessation of either, illustrates the great law of gravitation.

**HAARLEM**, an ancient town in Holland, once the residence of the counts, was taken by the duke of Alva, in July, 1573, after a siege of seven months. He violated the capitulation by butchering half the inhabitants. The lake was drained, 1839-51. Population, 1890, 51,626; 1900, 65,189.

**HABEAS CORPUS.** The subjects' *Writ of Right*, passed "for the better securing the liberty of the subject," 31 Charles II. c. 2, 27 May, 1679. If any person be imprisoned by the order of any court, or of the queen herself, he may have a writ of habeas corpus, to bring him before the court of queen's bench or common pleas, which shall determine whether his committal be just. This act (founded on the old common law) is next in importance to *Magna Charta*. The *Habeas Corpus* act can be suspended by parliament for a specified time when the emergency is extreme. In such a case the nation parts with a portion of its liberty to secure its own permanent welfare, and suspected persons may then be arrested without cause or purpose being assigned. *Blackstone*.

The constitution of the United States provides that "the privilege of habeas corpus shall not be suspended, unless when, in cases of rebellion or invasion, the public safety may require it;" but does not specify the department of the government having the power of suspension. A series of contests on this subject between the legal and military authorities began in Maryland, May, 1861.

In consequence of the affair of John Anderson (see *Slavery in England*, note), an act was passed in 1862, enacting that no writ of *Habeas Corpus* should issue out of England into any colony, &c., having a court with authority to grant such writ.

In the case of "Hutt and another v. the Governors of the college and others," Mr. Robertson, the headmaster, and Mr. Fenning, assistant, were exonerated from the charges of unlawfully expelling Henry Hutt, aged 15, on suspicion of stealing money; and the boy was declared innocent by the Queen's Bench division, 19 June, 1901, awarded to the plaintiffs, 27 June, 1888. **HAIR**. In Gaul, hair was much esteemed, hence the appellation *Gallia comata*; cutting off the hair was a punishment. The royal family of France held it as a privilege to wear long hair artfully dressed and curled. "The clerical tonsure is of apostolic institution!" *Isidorus Hispalensis*. Pope Anicetus forbade the clergy to wear long hair, 155. Long hair was out of fashion during the protectorate of Cromwell, and hence the term *Round-heads*; in 1795; and also 1801.—*Hair-powder* came into use in 1590; and in 1795 a tax of a guinea was laid upon persons using it, which yielded at one time 20,000*l.* per annum. The tax was repealed 24 June, 1809, when it yielded about 1000*l.* a year. *See Beard*. Some members of a Burmese family totally covered with hair were exhibited in London in July, 1886.

Much was pulled down, and the grand inner court built by William III. in 1694, when the gardens, occupying 40 acres, were laid out. The vine was planted 1769. (See *Grapes*.) Both armies suffered severely, but the allies most, and were compelled to retire. The county of Hanau was made a principality in 1803; seized by the French in 1806; incorporated with the duchy of Frankfurt in 1809; restored to Hesse in 1813; which was annexed to Prussia in 1866.

 [He married, in 1659, the princess Sophia, daughter of Frederick, elector palatine, and of Elizabeth, the daughter of James I. of England. In 1701, Sophia was declared next heir to the British crown, after William III., Anne, and their descendants.]

**HANSE TOWNS**. The Hanseatic league (from *hansa*, association), formed by port towns in Germany against the piracies of the Swedes and Danes: began about 1140; the league signed 1241. At first it consisted only of towns situate on the coasts of the Baltic sea, but in 1370 it was composed of sixty-six cities and forty-four confederates. The league proclaimed war against Waldemar, king of Denmark, about the year 1348, and against Eric in

1428, with forty ships and 12,000 regular troops, besides seamen. On this several princes ordered the merchants of their respective kingdoms to withdraw their effects. The Thirty Years' War in Germany (1618-48) broke up the strength of the association, and in 1630 the only towns retaining the name were Lübeck, Hamburg, and Bremen. The league suffered also by the rise of the commerce of the Low Countries in the 15th century. Their privileges by treaty in England were abolished by Elizabeth in 1578.

**HANSOM**, see *Cabriolets*.

**HANWELL LUNATIC ASYLUM**, for Middlesex, established 1831.

**HAPSBURG** (**HABSBURG** or **HABICHTS-BURG**), **HOUSE OF**, the family from which the imperial house of Austria sprang in the 11th century, Werner being the first named count of Hapsburg, 1096. Hapsburg was an ancient castle of Switzerland, on a lofty eminence near Schintznach. Rodolph, count of Hapsburg, became archduke of Austria, and emperor of Germany, 1273; see *Austria*, and *Germany*.

**HARBOURS**. England has many fine natural harbours; the Thames (harbour, dock, and depot), Portsmouth, Plymouth, &c. Acts for the improvement of harbours, &c., were passed in 1847, 1861, and 1862.

**HARES AND RABBITS ACT**. See *Game*.

**HARLEIAN LIBRARY**, containing 7000 manuscripts, besides rare printed books, collected by Robert Harley, afterwards earl of Oxford and Mortimer, 1705, *et seq.*, is now in the British Museum. A large portion of his life and wealth was spent on the collection. He died 21 May, 1724. The Harleian Miscellany, a selection from the MSS. and Tracts of his library, was published in 1744 and 1808.

**HARLEIAN SOCIETY**, founded in 1869 for the publication of heraldic visitations, &c.

**HARLEY ADMINISTRATION**, see *Oxford*.

**HARMONICA**, or musical glasses (tuned by regulating the amount of water, and played by a moistened finger on the rim), were played on by Gluck in London, 23 April, 1746; "arranged" by Puckeridge and Delaval, and improved by Dr. Franklin in 1760; Mozart, Beethoven, and others composed for this instrument: see *Copophone*. "**HARMONICON**," an excellent musical periodical, edited by W. Ayton, Jan. 1823—Sept. 1833.

**HARMONICHORD**, a keyed instrument, in which sounds are produced by friction, invented by Th. Kauffmann in 1810.

**HARMONISTS**, a sect, founded in Würtemberg by George and Frederick Rapp, about 1780. Not much is known of their tenets, but they held their property in common, and considered marriage a civil contract. They emigrated to America, and built New Harmony in Indiana in 1815. Robert Owen purchased this town about 1823; but failed in his scheme at establishing a "social" community and returned to England: see *Socialists*. The Harmonists removed to Pittsburg in Pennsylvania in 1822.

**HARMONIUM**, a keyed instrument, resembling the accordion, the tones being generated by the action of wind upon metallic reeds. The Chinese were well acquainted with the effects produced by vibrating tongues of metal. M. Biot stated, in 1810, that they were used musically by M. Grenié; and in 1827-29, free reed stops were employed in organs at Beauvais and Paris. The best known harmoniums in England are those of Alexandre and Debain, the latter claiming to be the original maker of the French instrument. In 1841, Mr. W. E. Evans, of Cheltenham, produced his English harmonium, then termed the Organ-Harmonica, and by successive improvements he produced a fine instrument, with diapason quality, and great rapidity of speech, without loss of power. Dawes' melody attachment patented 1864.

**HARMONY**, the combination of musical notes of different pitch, appears not to have been practised by the Greeks.

Hucbald, a Flemish monk, published combinations in his "Enchiridion Musicae," 9th century.

Harmony greatly promoted by Palestrina, and especially by Monteverde.

Jean de Muris wrote "Ars Contrapuncti" in 14th century.

Francis of Cologne described "descant," 1600.

Beethoven greatly enlarged the range of harmonic bases.

**HARNESS**, chariots and the leathern dressings used for horses to draw them, are said to have been the invention of Erielthionius of Athens, who was made a constellation after his death, under the name of *Boötes* (Greek for ploughman), about 1487 B.C.

**HARO, CRY OF** (*Clameur de Haro*), traditionally derived from Raoul, or Rollo, of Normandy, ancestor of our Norman princes of England. Rollo administered justice so well, that injured persons uttered the cry "*Ha Rou! Ha Rou! A mon aide, mon prince, on me fait tort.*" The cry was raised in a church in Jersey in 1859.

**HARP**. Invented by Jubal, 3875 B.C. (*Gen. iv. 21*). David played the harp before Saul, 1063 B.C. (*1 Sam. xvi. 23*). The Cimbri, or English Saxons, had this instrument. The celebrated Welsh harp was strung with gut; and the Irish harp, like the more ancient harps, with wire. Erard's improved harps were first patented in 1795.

One of the most ancient harps existing is that of Brian Boroinche, monarch of Ireland: it was given by his son Donagh to pope John XVIII., together with the crown and other regalia of his father, in order to obtain absolution for the murder of his brother Teig. Adrian IV. alleged this as being one of his principal titles to the kingdom of Ireland in his bull transferring it to Henry II. This harp was given by Leo X. to Henry VIII., who presented it to the first earl of Clanricarde: it then came into possession of the family of De Burgh; next into that of MacMahon of Clenagh, county of Clare; afterwards into that of MacNamara of Limerick; and was at length deposited by the right hon. William Conyngham in the College Museum, Dublin, in 1782.

The *clavichord*, fitted like the pianoforte with a keyboard, and played like the pianoforte, was introduced into Brussels and Antwerp by Mdlle. Dratz, and played on by her at Prince's Hall, London, 13 March, 1838.

**HARRISON'S TIME-PIECE**, made by John Harrison, of Foulby, near Pontefract. In 1714, the government offered rewards for methods of determining the longitude at sea; to obviate the irregularities in the rate of clocks by variations of temperature, Harrison invented the method of compensation, before 1720. He came to London, and produced his first time-piece in 1735; his second in 1739; his third in 1758; and his fourth, which procured him the reward of 20,000*l.* offered by the Board of longitude, a few years after. He obtained 10,000*l.* of his reward in 1764, and other sums, more than 24,000*l.* in all, for further improvements in following years. He was born, May, 1693, and died in 1776.

**HAWAII** or **OWHYHEE**, the chief of the 12 islands which constitute the territory of Hawaii, situated in the N. Pacific Ocean. The islands are said to have been discovered in 1542 by Gaetano, and were rediscovered by capt. Cook in 1778, who named them the Sandwich islands, after lord Sandwich, then the first lord of the admiralty. Capt. Cook was killed at Owhyhee by the natives 1779. King Kamehameha I., who died 1819, united the 12 islands into one monarchy, and under his successor, Kamehameha II., idolatry was abolished, 1819-20; the king and his queen visited England, and died in London 1824. In 1840, Kamehameha III. established a constitution, which included an assembly of nobles, and a representative council. The independence of the kingdom was guaranteed by the English and French governments in 1843. A more popular constitution was granted in 1887, but in 1893 a revolution broke out, and the queen Liliuokalani was dethroned, and a republic was proclaimed in 1894. Hawaii was formally annexed to the United States 1898, and became one of its territories in 1900. Population, about 100,000, three-fourths of which are Japanese. Honolulu is the capital of the Hawaiian group; population about 30,000.

**HEALTH, GENERAL BOARD OF**, was appointed by the act for the promotion of the public health, passed in 1848. This board was reconstructed in Aug. 1854, and sir Benjamin Hall was placed at its head, with a salary of 2000*l.*; succeeded by W. F. Cowper, Aug. 1855, and by Ch. B. Adderley in 1858. In 1858 this board was incorporated into the privy council establishment; Dr. Simon being retained as medical officer. See *Hygiene, Hygeiopolis, Sanitation, Exhibitions, Public Health*, &c.

**HEARTH, or CHIMNEY, TAX**, on every fire-place or hearth in England, was imposed by Charles II. in 1662, when it produced about 200,000*l.* a year. It was abolished by William and Mary at the Revolution in 1689; imposed again, and again abolished.

**HEAT** (called by French chemists *Caloric*). Little progress had been made in the study of the phenomena of heat till about 1757, when Joseph Black put forward his theory of latent heat (heat, he said, being absorbed by melting ice), and of specific heat. Cavendish, Lavoisier, and others, continued Black's researches. Sir John Leslie put forth his views on radiant heat in 1804. Count Rumford put forth the theory that heat consists in motion among the particles of matter, which view he supported by experiments on friction (recorded in 1802). This theory (now called the dynamical or mechanical theory of heat, and used to explain all the phenomena of physics and chemistry) has been further substantiated by the independent researches of Dr. J. Meyer of Heilbronn and of Mr. James P. Joule of Manchester, who assert that heat is the equivalent of work done. Mr. Joule, in his papers published 1841-2, laid the foundation

of the science of thermo-dynamics, on which he worked till his death, 11 Oct. 1889. The Joule Memorial fund proposed, 30 Nov. 1889, was instituted by the Royal Society, Jan. 1890. In 1854, Sir William Thomson (aft. lord Kelvin), of Glasgow, published his researches on the dynamical power of the sun's rays. Thermo-electricity, produced by heating pieces of copper and bismuth soldered together, was discovered by Seebeck in 1823. A powerful thermo-electric battery was constructed by Marcus of Vienna, in 1865. Professor Tyndall's "Heat, a Mode of Motion," first published Feb. 1863, third edition, 1868, sixth edition, 1880. The researches of philosophers are still devoted to this subject; see *Boiling and Calorescence*. Greatest heat in the hot summer of 1868: at Nottingham, in sun, 122.4; in shade, 92.2, 22 July, 1 p.m.: 14 Aug. 1876, 95.7 in the shade; 147 in sun; 26 June, 1878, 95 in the shade.

Sir George Cayley invented a heated-air engine in 1807, and Mr. Stirling applied it to raising water in Ayrshire in 1818. One invented by Mr. Wenham was described in 1873. Improvements have been made by C. Wm. Siemens. Coal gas is generally employed.—See *Gas Engines*.

Captain John Ericsson constructed a ship, in which caloric, or heat, was the motive power. On 4 Jan. 1853, it sailed down the bay of New York, at the rate of 14 miles an hour, it is said at a cost of 80 per cent. less than steam. Although caloric engines were not successful, capt. Ericsson continued his experiments, and patented an improved engine in 1856. In 1868 he proposed condensation of the sun's rays, and their employment as a motive power; in March, 1889, he exhibited his apparatus in New York shortly before his death, aged 86.

**HEBREWS**; see *Jews*. The Epistle to the Hebrews ascribed to St. Paul is dated 64; it was probably written by Barnabas or Apollos. The chief classic authors of all nations, except Greece, have been translated into Hebrew.

**HEBRIDES** (the *Ebudes* of Ptolemy and the *Hebudes* of Pliny), western isles of Scotland, long subject to Norway; ceded to Scotland in 1264; and annexed to the Scottish crown in 1540 by James V. The heritable jurisdictions were abolished in 1747.

**HEBRON** (in Palestine). Here Abraham resided, 1860 B.C.; and here David was made king of Judah, 1048 B.C. On 7 April, 1862, the prince of Wales visited the reputed cave of Machpelah, near Hebron, said to contain the remains of Abraham and his descendants.

**HECATOMB**, an ancient sacrifice of a hundred oxen, particularly observed by the Lacedæmonians when they possessed a hundred cities. The sacrifice was subsequently reduced to twenty-three oxen, and goats and lambs were substituted.

**HECLA, MOUNT** (Iceland). Its first recorded eruption is 1004. About twenty-two eruptions have taken place, according to Olsson and Paulson. Great convulsions of this mountain occurred in 1766, since when a visit to the top in summer is not attended with great difficulty. Perhaps the most awful volcanic eruption on record took place in 1784-5, when rivers were dried up, and many villages overwhelmed or destroyed. The mount was in a state of violent eruption from 2 Sept. 1845, to April, 1846. Three new craters were formed, from which pillars of fire rose to the height of 14,000 English feet. The lava formed several hills, and pieces of pumice stone and scoræ of 2 cwt. were thrown to a distance of a league and a half; the ice and snow which had covered the mountain for centuries melted into prodigious floods.

**HEGIRA, ERA OF THE**, dates from the flight (Arabic *hejra*) of Mahomet, from Mecca to Medina, on the night of Thursday, 15 July, 622. The era commences on the 16th. Some compute this era from the 15th, but Cantemir proves that the 16th was the first day. 33 of its lunar years are equal to 32 of those of the vulgar era.

**HEIDELBERG** (Germany) was the capital of the Palatinate, 1362-1719. The protestant electoral house becoming extinct in 1693, a war ensued, in which the castle was ruined, and the elector removed his residence to Mannheim. It was annexed to Baden in 1802. Here was the celebrated tun, constructed in 1343, when it contained twenty-one pipes of wine. Another was made in 1664, which held 600 hogshheads. It was destroyed by the French in 1688; but a larger one, fabricated in 1751, which held 800 hogshheads, and was formerly kept full of the best Rhenish wine, is said to be mouldering in a damp vault, empty, since 1769. Population, 1890, 31,737; 1900, 40,119.

A portable heliograph, invented by Mr. H. Mance, of the

Persian telegraph department, was announced in 1875. It was employed in India, 1877-78; in the Afghan and Zulu campaigns, 1879-80, and S. African war, 1899-1902. See also *Photography*.

**HELIOMETER**, an instrument for measuring the diameters of the sun, moon, planets, and stars, invented by Savary, in 1743; applied by M. Bouguer, in 1744. A fine heliometer, by Repsold of Hamburg, was set up at the Radcliffe observatory, Oct. 1849.

**HELIOPOLIS**; see *Baalbec* (in Syria). The name was also given to a city in Lower Egypt (the biblical On or Bethshemesh) in the earliest known times, a chief seat of the worship of the sun. It suffered much by the Persian invasion, 525 B.C., and was in ruins in the time of Strabo, who died about A.D. 24.

According to the legendary story of the loves of Hero of Sestos, and Leander of Abydos, Leander was drowned in a tempestuous night as he was swimming across the Hellespont (about one mile), and Hero, in despair, threw herself into the sea, dated seventh century B.C. Lord Byron and lieut. Ekenhead also swam across, 3 May, 1810. See *Xerxes*.

Richard I. of England wore a plain round helmet; but most of the English kings had crowns above their helmets. Alexander III. of Scotland, 1249, had a flat helmet, with a square grated vizor, and the

helmet of Robert I. was surmounted by a crown, 1306. *Gwilling*.

**HELOTS**, *captives*, derived by some from the Greek *helein*, to take; by others from Helos, a city which the Spartans hated for refusing to pay tribute. The Spartans, it is said, ruined the city, reduced the Helots to slavery, and called all their slaves and prisoners of war *Helotæ*, 700 B.C. The number of the Helots was much enlarged by the conquest of Messenia, 668 B.C.; and is considered to have formed four-fifths of the inhabitants of Sparta. In the Peloponnesian war the Helots behaved with uncommon bravery, and were rewarded with liberty, 431 B.C.; but the sudden disappearance of 2000 manumitted slaves was attributed to Lacedæmonian treachery. *Herodotus*. The connection between the Helots and Helos is now considered mythical.

During the Crimean war Sveaborg, a series of formidable batteries, was bombarded by the allied fleet for two days and nights without inflicting material damage, Aug. 1855. Helsingfors has numerous handsome buildings, including the senate-house, the university, removed here from Åbo in 1828, three handsome churches, a hospital, and an observatory. It carries on a considerable trade in Baltic produce. Population, 1904, 116,000, including Russian garrison troops.

In 1785 there were imported from Russia, in British ships, 17,695 tons of hemp and flax." *Sir John Sinclair*. It was zealously opposed by the popes of Rome, and was annulled by Justin I. in 518. The orthodox party triumphed, and many heretic bishops were expelled from their sees.

**HEPTARCHY** (or government of seven rulers) in England was gradually formed from 455, when Hengist became king of Kent. It terminated in 828, when Egbert became sole monarch of England. There were at first nine or ten Saxon kingdoms, but Middlesex soon ceased to exist, and Bernicia and Deira were generally governed by one ruler, as Northumbria: see *Britain*.

**HERACLEA**, see *Pandasia*.

**HERACLIDÆ**, descendants of Hercules, who were expelled from the Peloponnesus about 1200 B.C., but reconquered it in 1048, 1103-4 or 1109 B.C., a noted epoch in chronology, all the history preceding being accounted fabulous.

The Phrygians had a sow; the Thracians, Mars; the Romans, an eagle; the Goths, a bear; the Flemings, a bull; the Saxons, a horse; and the ancient French a lion, and afterwards the fleur-de-lis (*which see*). Heraldry, as an art, is ascribed first to Charlemagne, about 800; and next to Frederick Barbarossa, about 1152; it began and grew with the feudal law. *Mackenzie*. The great English works on Heraldry are those of Barcham or Barkham, published by Gwillim (1610), Edmondson (1780), and Burke's "Armory" (1842; new ed. 1883, contains a history and the arms of above 66,000 British families, &c.). The Persians, baffled in an attempt in 1838, took it 25 Oct. 1856, in violation of the treaty of 1853; and war ensued between Great Britain and Persia. Peace was made in April, 1857; and Herat was restored 27 July following. It was seized again by Dost Mahomed, 26 May, 1863; taken by Yakob Khan, rebelling against his father, 6 May, 1871. **HERCULANEUM**, an ancient city of Campania, overwhelmed, together with Pompeii, by an eruption of lava from Vesuvius, 23 or 24 Aug. 79. Successive eruptions laid them still deeper under the surface, and all traces of them were lost until excavations began in 1711; and in 1713 many antiquities were found. In 1738 excavations were resumed, and works of art, monuments, and memorials of civilized life were discovered. 150 rolls of MSS. papyri were found in a chest, in 1754; and many antiquities were purchased by sir William Hamilton, and sold to the British Museum, where they are deposited; but the principal relics are preserved in the museum of Portici. The "Antichità di Ercolano," 8 vols. folio, were published by the Neapolitan government, 1757-92.

Arrangements for carrying out further excavations in progress, 1905.

**HEREDITY**. The transmission of qualities of like kind of those of the parents has been specially studied by Mr. Francis Galton, F.R.S., who published "Hereditary Genius," 1869, and "Records of Family Faculties," containing tabular forms to be filled up, in order to obtain authentic data for his new science of "Eugenics." Money prizes, 5*l.* and upwards, were offered for the best records. His "Inquiries into Human Faculty" was published in 1883, and "Natural Inheritance" in 1889. Works also by Haeckel, Hertwig, Nageli, Herbert Spencer, Virchow, Guyau, and others.

Dr. August Weismann, in his "Studies in the Theory of Descent," English translation, 1882, and in his "Essays on Heredity," &c., 1889, set forth his reasons for opposing the theory, and referred to his researches on the lowest forms of animal life, *protozoa*, &c., and to Darwin's principle of natural selection, which he considers as the only possible theory for explaining the difficulties connected with metamorphoses of species. Much controversy ensued, in which the late prof. G. J. Romanes took a leading part. Mendel's "Principles of Heredity," published 1902.

**HEREFORD** was made the seat of a bishopric about 676, Putta being first bishop. The cathedral was founded by a nobleman named Milfride, in honour of Ethelbert king of the East Saxons, who was treacherously slain by his intended mother-in-law, the queen of Mercia. The tower fell in 1786, and was rebuilt by Mr. Wyatt. The cathedral was re-opened after very extensive repairs, on 30 June, 1863. The see is valued in the king's books at 768*l.* per annum. HERETICS (from the Greek *haireisis*, choice). Paul says, "After the way they call *heresy*, so worship I the God of my fathers," 60 (*Acts* xxiv. 14). Heresy was unknown to the Greek and Roman religions. Simon Magus is said to have broached the Gnostic heresy about 41. This was followed by the Manichees, Nestorians, Arians, &c.; see *Inquisition*. It is stated that the promulgation of laws for prosecuting heretics was begun by the emperor Frederick II. in 1220; and immediately adopted by pope Honorius III.

**HESSIE** (W. Germany), the seat of the Catti, formed part of the empire of Charlemagne; from the rulers of it in his time, the present are descended. It was joined to Thuringia till about 1263, when Henry I. (son of a duke of Brabant and Sophia, daughter of the landgrave of Thuringia) became landgrave of Hesse. The most remarkable of his successors was Philip the Magnanimous (1509), an eminent warrior and energetic supporter of the Reformation, who signed the Augsburg Confession in 1530 and the League of Smalcald in 1531. At his death, in 1567, Hesse was divided into **HESSIE-CASSEL** and **HESSIE-DARMSTADT**, under his sons William and George, and their descendants played an eminent part in the convulsions of Germany during the 17th and 18th centuries.\* In 1803 Hesse-Cassel became an electorate, and in 1806 Hesse-Darmstadt a grand duchy; which titles were retained in 1814. In 1807 Hesse-Cassel was incorporated with the kingdom of Westphalia, but in 1813 the electorate was re-established. Capital, Darmstadt.  1821. William II.; born 28 July, 1777; died 20 Nov. 1847.  
 1847. Frederic William; born 20 Aug. 1802.  
 The elector, in 1850, remodelled the constitution given in 1831 (by which the chamber had the exclusive right of voting the taxes), and did not convene the chamber until the usual time for closing the session had arrived, when his demand for money for 1851 was laid before it. The chamber called for a regular budget, that it might discuss its items. The elector dissolved the chamber, and declared his dominions in a state of siege, 7 Sept. 1850.  
 He fled to Hanover, and subsequently to Frankfurt; and on 14 Oct. he formally applied to the Frankfurt diet for assistance to re-establish his authority in Hesse. On 6 Nov. an Austro-

\* Six thousand Hessian troops arrived in England, in consequence of an invasion being expected in 1756. The sum of 471,000*l.* three per cent. stock was transferred to the landgrave of Hesse, for Hessian auxiliaries lost in the American war, at 3*o*l. per man, Nov. 1786. The Hessian soldiers were again brought to this realm at the close of the 18th century, and served in Ireland during the rebellion in 1798.

Bavarian force of 10,000 men entered Hesse-Cassel, under the command of Prince Thurn-and-Taxis, who fixed his head-quarters in Hanau; and on the next day a Prussian force entered Cassel. The elector returned to his capital, the taxes having been collected under threats of imprisonment, 27 Dec. 1850.

The constitution of 1831 was abolished, and a new one established, 1852.

The conflict was soon resumed, and continued till, by law of 20 Sept. 1866, Hesse-Cassel was annexed to Prussia, 8 Oct. 1866.

The ex-electors' property sequestered for intriguery against Prussia, 2 Nov. 1868 and Feb. 1869. He died 6 Jan. 1875.

**HESSIAN FLY** (*Cecidomyia destructor*), the American wheat midge, very destructive to the corn in the United States in 1786, whither it is said to have been brought by the Hessian soldiers in British pay—hence its name.

The crops suffered severely in New York state in 1846 and 1886. It appeared in England in 1788, and was described by sir Joseph Banks. Its appearance here in 1887 occasioned much alarm throughout the country. Its action said to be checked by a parasite—*Saw-fly* (*Ceraphron destructor*)—*W. Freese*, Aug. 1887. Very prevalent in eastern coast of Britain, not much inland. *Ormerod*, Aug. 1887.

**HIEROGLYPHICS**, literally sacred sculptures or engravings, the representation of objects to express language, used by the ancient Egyptians, Mexicans, and other nations. The Egyptians used about 1700 hieroglyphs, engraved on stone, painted on wood, and written on papyri. They were either phonetic or ideographic. Their invention is mythically ascribed to Athotes. See "Book of the Dead," in article *Death*. Young, Champollion, Rosellini, Lepsius, Brugsch, Mariette, Chabas, De Rougé, Bunsen, Birch, Budge, Hilmy, and others (in the 19th century) have much elucidated Egyptian hieroglyphics; see *Rosetta Stone*. A. Erman's "Egyptian Grammar," English translation by J. H. Breasted, published about July, 1894.

**HIGH AND LOW CHURCH** sections in the Church of England became prominent in the reign of Elizabeth. High church principles were maintained by Abp. Whitgift, and set forth by Richard Hooker "the judicious" in his *Ecclesiastical Polity*, 1593-7. They were opposed by the Puritans. The contest, hot in the reign of Anne, has continued since. Dr. Sacheverell, preacher at St. Saviour's, Southwark, was prosecuted for two seditious sermons preached (14 Aug. and 9 Nov. 1709) to create apprehension for the safety of the church, and to excite hostility against dissenters. His friends were called High Church and his opponents

Low Church, or moderate men, 1720. The queen favoured Sacheverell, and presented him with the rectory of St. Andrew's, Holborn. He died in 1724.

**HIGH COMMISSION, COURT OF**, an ecclesiastical court, erected by 1 Eliz. c. 1, 1559, by which all spiritual jurisdiction was vested in the crown. **HIGHER CRITICISM**. The terms "higher" and "lower" criticism were adopted and are used with specific reference to the criticism of the Bible. *Higher criticism* is the criticism of the literary forms and contents of the Bible, *lower criticism* is the criticism of the text of the Bible—of the original languages in which it was written. The Bible was written by many men and in three languages, Hebrew, Chaldee, and Greek. These languages have become dead languages, but they survive in written documents, and in these languages the Bible in the original is preserved to us. Criticism of the literary forms and contents of the Bible is necessary in order to establish true principles of Biblical interpretation, and to get at the intended and true meaning of the Bible. The doctrine of the divine inspiration of the Bible does not reach to the letter of the Bible, for that would mean the creation of a special and holy language through which to give the Bible to man. The Bible comes to us through human language as it is, and not as we imagine it might be or ought to be. The language is the language of man, and therefore fallible. The text of the Bible therefore depends for its accuracy upon the attention and care of successive generations of copyists. Thus Bible criticism is necessary to ascertain the true text of the Bible, and what its contents really are. In the higher criticism of the Bible there are four questions to be determined:—(1) Its integrity: to decide whether the writing in question is the work of a single author or a combination of writings by more than one author; whether it has received additions by editing in later times, or is in its original condition. What the parts are—which original and which added, and how and when the additions were made. (2) Its authenticity: this asks the question, does the writing bear the author's name, or is it anonymous? If the name is given, is the title a true one or a forgery, or is it anonymous? and if anonymous, what is its use as a writing? (3) Its literary forms: to determine the style and literary method of the various writers. (4) Its credibility: the answer to the question, are the writings which compose the Bible true? The result of the investigations of the higher criticism, so far as it has gone, has been partly destructive, for there were undoubtedly errors both in the Bible itself and also, and to a much greater extent, in its traditional interpretation by orthodox Christians; but this work has also been constructive, by clearing away from the Bible what was untrue, and establishing what is true and divine. The Reformation in the 16th century released the critical mind of Europe, and gave it liberty to work, with the result that a new spirit and method of inquiry arose, and were made use of in the search for the true meaning and worth

of the Bible. At this time, it is true, the main effort was put forth in the defence of the original text, and for the simple grammatical exegesis of the Bible as against that of the Vulgate and traditional authority; but both Luther and Calvin worked upon questions of the higher criticism. Calvin, for example, denied that St. Paul was the author of the Epistle to the Hebrews. He also claimed that the Book of Psalms was a collection of psalms, and that David was not the author or even editor of the entire book. Luther denied that the Epistle of St. James was by an apostle, and was quite willing, apparently, to allow that the whole Pentateuch was not written by Moses. But questions of authorship were not the prominent questions at this time in Biblical inquiry and research. The father of the higher criticism is the German Eichorn, in the last quarter of the 18th century. In the Book of Genesis Eichorn traces the marks of two sets of documents—one Elohist, and the other Jehovist—and thus makes the book the work of two authors. The critical work begun by Eichorn went on in Germany; but owing to the fact that English divines were at this time engaged in bitter conflict with deism, the higher criticism had very little effect in England. It was not till the 19th century that English scholars really awoke to questions of Biblical criticism. It began with bishop Colenso's attack upon the historical books of the Pentateuch and that of Joshua. Since Colenso's time we have had such scholars as bishop Lightfoot and Robertson Smith, and in the present day there are at work among us upon questions of the higher criticism such men as professors Driver and Kirkpatrick.

**HIGHGATE ARCHWAY**, over a road made to avoid the hill; first stone laid by Edward Smith, 31 Oct. 1812; toll through ceased, 1 May, 1876. Rebuilding proposed, 1893; completed, 1900. See *London*, Nov. 1889.

**HIGHGATE COLLEGE**, founded by sir Roger Cholmeley, 1565.

**HIGHLANDS** (of Scotland), long held by semi-barbarous clans, were greatly improved by the construction of military roads by general Wade, about 1725-6; by the abolition of heritable jurisdiction of feudal rights in 1747, and by the establishment of the Highland and Agricultural Society in 1784; centenary celebrated at Edinburgh, July, 1884. See *Regiments*, *Crofters*.

*Highland Society of London*, founded 28 May, 1778. *Highland Land League* held fifth annual conference at Oban, 15 Sept. 1887; Glasgow, Sept. 1893.

**HIGHNESS**. The title of *Highness* was given to Henry VII.; and this, and sometimes *Your Grace*, was the manner of addressing Henry VIII.; but about the close of the reign of the latter, the titles of "Highness" and "Your Grace" were absorbed in that of "Majesty." Louis XIII. of France gave the title of Highness to the prince of Orange, in 1644; this prince had previously only the distinction of Excellency. Louis XIV. gave the princes of Orange the title of High and Mighty Lords, 1644. *Hénauld*.

**HIGH PRIEST**, see *Priest*.

**HIGH TREASON**. To regulate the trials for this crime the statute, so favourable to liberty, the 25th of Edward III., 1352, was enacted, by which two living witnesses are required. By an act passed 19 April, 1821, this provision was extended to Ireland, parliament having refused to sanction the sentence of death against the duke of Somerset.

In 1800 it was enacted that when the overt act was a direct attempt on the life of the sovereign, the trial should be conducted in the same manner as in the case of an indictment for murder. The trial of John Horne Tooke and others for constructive high treason failed, see *Horne Tooke*, Nov., Dec. 1794. See *Treason*.

The last two cases of execution for high treason :—

I. William Cundell alias Connell, and John Smith; tried on a special commission, 6 Feb. 1812, being two of fourteen British subjects taken in the enemy's service in the Isles of France and Bourbon. Mr. Abbot, afterwards lord Tenterden and chief justice, and sir Vicary Gibbs, attorney-general, conducted the prosecution, and Mr. Brougham, aft. lord Brougham, defended the prisoners. The defence was, that they had assumed the French uniform to aid their escape to England. They were hanged and beheaded on the lodge of Horsemonger-lane gaol on 16 March, 1812.

All the other convicts were pardoned, upon condition of serving in colonies beyond the seas.

II. The *Cato-street Conspirators* (which see), executed 1 May, 1820.

"Colonel" Lynch, member-elect for Galway, who fought on the side of the Boers in the S. African war, prosecuted by the crown on the charge of high treason, and tried at the king's bench before the lord chief justice, Mr. Justice Wills, and Mr. Justice Channell, and sentenced to death 23 Jan. 1903. The lord chief justice laid down, "that if a subject, in time of war, joined the king's enemies, for whatever purpose, that was an act of treason." Sentence afterwards commuted to penal servitude for life. Released "on licence," 23 Jan. 1904.

**HILLSBOROUGH** (Down, N.E. Ireland), founded by sir A. Hill, in the reign of Charles I. Here were held two great protestant meetings in favour of the Irish church: (1.) on 30 Oct. 1834, to protest against the "appropriation clause;" (2.) 30 Oct. 1867, in consequence of a commission of inquiry into the Irish church establishment, and the agitation consequent thereon.

**HIMALAYA**, a range of mountains between India and Tibet. Its loftiest peak is Mount Everest, height 29,002 ft., the highest known in the world.

Dr. Karl Diener explores the Central Himalayas to the height of 19,000 ft., April-July, 1892.

Mr. (aft. sir) Wm. Martin Conway's "Climbing in the Karakoram-Himalayas," published 1894; he ascended great glacier heights.

On 6 Sept. 1893, near Gohna, in the district of Garhwal, Bengal, nearly the whole of the hill Maithana fell into the river Birahi Ganga, a tributary of the Alaknanda, damming it up and forming a long deep lake, which gradually increased in size, and eventually overflowed and burst its banks, causing great destruction of buildings, bridges, &c., at Gohna and Hardwar, &c., 26-27 Aug. 1894. This event was anticipated by geologists, and through scientific precautions no loss of life ensued.

Whilst exploring the Nanga Parbat region, Mr. A. F. Mummery and 2 Gurkhas were killed by an avalanche, mid. Aug. 1895.

Dr. and Mrs. Bullock Workman explore five new peaks and four glaciers to the W. and S.W. of the Hunza Nagar valley; two snow-peaks were ascended from the head of the Choga Loongma glacier; first peak was reached by Mrs. Bullock Workman and two guides, to a height of 23,394 ft., 12 Aug. 1903.

The first brought to England arrived 25 May, 1850, and was placed in the Zoological Gardens, Regent's-park, London; (died, 11 March, 1878;) another, a female, four months old, was placed there in 1854 (died, Dec. 1882). One born here, 21 Feb. 1871, and another born 1 Jan. 1872, lived a few days only; another born 5 Nov. 1872. Two young ones born at Paris in May, 1858, and June, 1859, were killed by their mother. Important "Atlas of Histology," by Drs. E. Klein and E. N. Smith, published in 1880; "Elements of Histology," by Dr. E. Klein, third edition published in 1884.

**HISTORY**. The Bible, the histories of Herodotus, "the father of history," Thucydides, and the poems of Homer, are the foundations of early ancient history. Later ancient history is considered as ending with the destruction of the Roman empire in Italy, 476. Modern history dates from the age of Charlemagne, about 800. There was not a professorship of modern history in either of our universities until the years 1724 and 1736, when Regius professorships were established by George I. and George II. At Oxford professor E. A. Freeman, appointed 1884, died 16 March, 1892, succeeded by Mr. J. A. Froude, April, 1892; died, 20 Oct. 1894; succeeded by Mr. F. York Powell, Dec. 1894; succeeded by Mr. C. The castle of Jerablus, a mound and ruins, 20 miles below Bersidjik on the Euphrates, was visited by Henry Maundrell, 1699; by Dr. Pococke, 1745; and by J. H. Skene and Mr. Geo. Smith (died 1876), who agreed in considering the remains to be those of Carchemish, the ancient capital of the Hittites, captured and annexed by Sargon, king of Assyria (about 721 B.C.) when the nation was thoroughly subdued. The site had been held successively by Hittites, Assyrians, Babylonians, Greeks, Romans, and Arabs.

Captain C. R. Conder's discovery of a key to the language of Hittite inscriptions on bas-reliefs, gems, &c., some of which were discovered by Burekhardt, 1803, and re-discovered by Mr. Palmer in 1870, announced 26 Feb. 1887; they consist of invocations, hymns, &c. to the sun, &c. His "Altaic Hieroglyphs and Hittite Inscriptions" published 1887.

Prof. A. Sayce, in 1879, considered the Hittites to have been in very early times the predominant power in Asia Minor and N. Syria. The investigations of Messrs. Ramsay, Hogarth and Headlam, in 1890, supported by the English Asia Minor Exploration Fund, led to many discoveries which are described in the *Times* of 25 July, 1891. Investigations proceeding, 1905. New discoveries by the French expedition of 1893-94, and by M. E. Chantre, in Cappadocia, in 1898; see capt. Conder's letter, *Times*, 10 Oct. 1899. 3rd and enlarged edition of "The Hittites," by prof. Sayce, 1903, describes his partially successful efforts in interpreting the cuneiform Hittite inscriptions.

A conflict between the Russians and Prussians and the French, in which the last were victorious, took place 21 May, 1813.

**HOCHSTADT**, a city on the Danube, in Bavaria, near which several important battles have been fought: (1.) 20 Sept. 1703, when the Imperialists were defeated by the French and Bavarians, under marshal Villars and the elector of Bavaria. (2.) 2 (N. S. 13) Aug. 1704, called the battle of Blenheim (*which see*). (3.) 19 June, 1800, when Moreau totally defeated the Austrians, and avenged the defeat of the French at Blenheim.

**HOCKEY**. A game played with a ball and a club curved at the lower end. The field on which it is played is marked off with two goals, in which the players, who are divided into two sides, endeavour to

drive the ball. Known in Ireland as *hurling* and in Scotland as *shinty*, the game has become in recent years very popular in England, and at the present time (1905) is much in vogue. Many ladies play hockey, and there are over 1,000 ladies' hockey clubs in Great Britain and Ireland.

**HOLMFIRTH FLOOD.** On 5 Feb. 1852, the Bilberry reservoir above Holmfirth, near Huddersfield, Yorkshire, burst its banks, and levelled four mills and many ranges of other buildings, killing more than 90 persons, and devastating property estimated at above half a million.

**HOLOPHOTE**, a form of lamp in which the light is converged and directed to a particular spot to prevent collisions at sea, &c. Different kinds have been invented by Stevenson, Macdonald, Preece and others.

**HOLSTEIN AND SCHLESWIG (N.W. Germany)**, duchies once belonging to Denmark. The country, inhabited by Saxons, was subdued by Charlemagne in the beginning of the 9th century, and afterwards formed part of the duchy of Saxony. In 1106 or 1110, Adolphus of Schauenberg became count of Holstein: his descendants ruled till 1459, when Adolphus VII. died without issue, and the states of Holstein and Schleswig elected Christian, king of Denmark, his nephew, as their duke, through fear of his arms. In 1544, his grandson, Christian II., divided his states amongst his brothers, with the condition that the duchies should remain subject to Denmark. The eldest branch of the family reigned in Denmark till the decease of Frederick VII., 15 Nov. 1863. From a younger branch (the dukes of Holstein-Gottorp) descended through marriage, the kings of Sweden from 1751-1818, and the reigning family in Russia since 1762, when the duke, as the husband of Anne, became czar. In 1773, Catherine II. of Russia ceded Holstein-Gottorp to Denmark in exchange for Oldenburg, &c. The duchies were occupied by the Swedes in 1813, but restored to Denmark in 1814, and on 28 May, 1831, constituent assemblies were granted to them. Since 1844 disputes have been rife between the duchies and Denmark, and in 1848 the states-general of the duchies voted their annexation to the German confederacy, in which they were supported by Prussia; war ensued, which lasted till 1850, when they submitted to Denmark. The agitation in the duchies, encouraged by Prussia, revived in 1857. The Germans in Schleswig desired it to be made a member of the German confederation, like Holstein; but both duchies demanded a local government more independent of Denmark, which changes were resisted by that power. For the events of the war of 1864, see *Denmark*. By the convention signed at Gastein (*which see*), 14 Aug. 1865, the government of Holstein was left with Austria, and that of Schleswig with Prussia. The whole of Holstein and part of Schleswig were ceded to Prussia by the treaty of Prague, signed 23 Aug. 1866. The 5th clause, directing North Schleswig to be given to Denmark if the people voted for it, was not acted on, although claimed; and was abrogated, Feb. 1879. Expulsion of Danes, see *Prussia*, Oct. 1898.

**HOLY ALLIANCE** was ratified at Paris, 26 Sept. 1815, between the emperors of Russia (its originator) and Austria, and the king of Prussia, by which they ostensibly bound themselves, among other things, to be governed by Christian principles in all their political transactions, with a view to perpetuating the peace they had achieved. The compact was severely censured in this country as opposed to rational liberty.

**HOLY BROTHERHOOD**, see *Hermadad*.

**HOLY CROSS**, Society of, formed in 1855, by several clergymen of the Church of England, "for deepening spiritual life in their brethren;" president, the Rev. A. H. Mackonochie. It favours auricular confession and other Romanist practices.

**HOLY MAID OF KENT**. Elizabeth Barton was incited by the Roman Catholic party to oppose the Reformation by pretending to inspirations from heaven. She foretold the speedy and violent death of Henry VIII. if he divorced Catherine of Spain, and married Anne Boleyn, and direful calamities to the nation. She and her confederates were executed at Tyburn, 5 May, 1534.

**HOLYOKE**, Massachusetts, U.S. A Roman Catholic church here took fire; a panic ensued; and about 80 were burnt or trampled to death, 26, 27 May, 1875.

**HOLY PLACES IN PALESTINE**. These places have been a source of contention between the Greek and Latin churches for several centuries. In the reign of Francis I. they were placed under Latin monks, protected by the French government; but the Greeks from time to time obtained firmans from the Porte invalidating the rights of the Latins, who were at last (in 1757) expelled from the sacred buildings, which were committed to the care of the Greeks by a hatti-scheriff, or imperial ordinance.

The holy sepulchre partially destroyed by fire and rebuilt by the Greeks, who claim additional privileges, and cause fresh dissensions 1803

The Russian and French governments sent envoys (M. Dashkoff and M. Marcellus) to adjust the dispute; an arrangement prevented by the Greek revolution 1821

The subject again agitated, and the Porte proposed that a mixed commission should adjudicate on the rival claims. M. Titoff, the Russian envoy, acting on behalf of the Greeks, and M. Lavalette, the French envoy, on that of the Latins, took up the question very warmly 1850

A firman issued by the Porte, confirming and consolidating the rights previously granted to the Greek Christians, and declaring that the Latins had no right to claim exclusive possession of certain holy places specified, but permitting them to possess a key of the church at Bethlehem, &c., as in former times 9 March, 1852

The French government acquiesced with much dissatisfaction; but the Russian envoy still desired the key to be withheld from the Latin monks. M. D'Ozeroff made a formal declaration of the right of Russia to protect the orthodox in virtue of the treaty of Kainardji in 1774, and demanded that the firman of 9 March, 1852, should be read at Jerusalem, although it militated against his pretensions, which was accordingly done. The dispute still continued, the Porte being exposed to the attacks of both the Russian and French governments March, 1853

Prince Menschikoff arrives at Constantinople as envoy extraordinary, and in addition to the claims respecting the holy places, made demands respect-

ing the protection of the Greek Christians in Turkey which led to the war of 1854-6. (See *Russo-Turkish War*). 28 Feb. 1853

**HOLY ROMAN EMPIRE.** The German empire received this title under the emperor Otho I. the great, crowned at Rome by pope John XII., 2 Feb. 962. See *Rome, and Germany*.

**HOLY ROOD or CROSS.** A festival instituted on account of the recovery of a large piece of the cross by the emperor Heraclius, after it had been taken away, on the plundering of Jerusalem, about 615. The feast of the invention (or finding) of the Cross is on 3 May; that of the exaltation of the Cross, 14 Sept. At Boxley abbey, in Kent, was a crucifix, called the *Rood of Grace*; at the dissolution it was broken in pieces as an imposture by Hilsey, bishop of Rochester, at St. Paul's cross, London, 1536.

**HOLYROOD PALACE** (Edinburgh), formerly an abbey, was for several centuries the residence of the monarchs of Scotland. The abbey, of which some vestiges remain, was founded by David I. in 1128, and in the burial-place within its walls are interred several of his successors. The palace is a large quadrangular edifice of hewn stone, with a court within surrounded by piazzas. In the north-west tower is the bed-chamber which was occupied by queen Mary; and from an adjoining cabinet to it David Rizzio, her favourite, was dragged forth and murdered, 9 March, 1566. The north-west towers were built by James V., and the remaining part of the palace was added during the reign of Charles II. The palace was burnt in 1650, and rebuilt in 1659. Great improvements were made in 1857. Queen Victoria held a court here, 30 Aug. 1850; King Edward VII., 12 May, 1903.

**HOLY SEPULCHRE**, a Byzantine church in modern Jerusalem. Fergusson, Robinson, and others, consider the true site of the holy sepulchre to be the mosque of Omar, the "dome of the Rock." The question is still undecided. The order of the Holy Sepulchre was founded by Godfrey of Bouillon, 1099; revived by pope Alexander VI. 1496; re-organised, 1847 and 1868.

**HOME SECRETARY**, see *Secretaries*, and all the administrations under the name of their premier. New Home Office, Westminster, occupied 6 Aug. 1875.

"**HOME, SWEET HOME.**" The words are attributed to John Howard Payne, an American actor, who died in 1852; the music is said to be Sicilian, but it is probably by sir Henry Bishop, who introduced the song into "Clari, or the Maid of Milan, in 1823."

**HOMER'S ILIAD AND ODYSSEY**, the earliest and most perfect epic poems in the world. The first begins with the wrath of Achilles, and ends with the funeral of Hector; the second recounts the voyages and adventures of Odysseus or Ulysses, after the destruction of Troy. Various dates are assigned to these works, from 962 to 915 B.C.

F. A. Wolf, in his *Prolegomena*, in 1795, argued that the Homeric poems were composed of independent epic songs, collected and arranged by Peisistratus about 550 B.C. This theory occasioned much controversy between scholars and poets; Mr. Andrew Lang, in "Homer and the Epic," vigorously defends "the one author theory," March, 1893.

The first English version of the *Iliad*, by Arthur Hall, appeared in 1581. The present text is attributed to the time of Pericles, who died B.C. 429. The most celebrated versions of Homer's works are Chapman's, 1616; Hobbes', 1675; Pope's, 1715-25; Cowper's, 1791. The translation of the *Iliad* by the earl of Derby (1864) is much commended.

**HOMICIDE** is said to have been tried at Athens by the Areopagites. Among the Jews, wilful murder was capital; but for chance-medley the offender was to flee to one of the cities of refuge, and there continue till the death of the high-priest, 1451 B.C. (*Num. xxxv.*). 9 Geo. IV. c. 31 (1828) distinguishes between justifiable homicide and homicide in its various degrees of guilt, and circumstances of provocation and wilfulness; see *Murder*.

Animals have been tried and punished for killing human beings. A bull was hanged for homicide near the abbey of Beauprès . . . . . May, 1499

**HOMILDON HILL** (Northumberland), where the Scots, headed by the earl of Douglas, were defeated by the Percies (among them Hotspur), 14 Sept. 1402. Douglas and the earls of Angus, Murray, Orkney, and the earl of Fife, son of the duke of Albany, and nephew of the Scottish king, with many of the nobility and gentry, were taken prisoners.

**HOMILIES** in early Christian times were discourses delivered by the bishop or presbyter, in a homely manner, for the common people. Charlemagne's "Homiliarium" was issued 809. The Book of Homilies drawn up by abp. Crammer, and published 1547, and another prepared by an order of convocation, 1563, were ordered to be read in those churches that had not a minister able to compose proper discourses.

**HOMOEOPATHY**, a hypothesis promulgated in his "Organon of Medicine," 1810, and in other works, by Dr. Samuel Hahnemann, of Leipsic (died 2 July, 1843), according to which every medicine has a specific power of inducing a certain diseased state of the system (*similia similibus curantur*, likes

are cured by likes); and if such medicine be given to a person suffering under the disease which it has a tendency to induce, such disease disappears, because two similar diseased actions cannot simultaneously subsist in the same organ. *Brande*. Infinitesimal doses of medicine, such as the millionth of a grain of aloes, have been employed, it is said, with efficacy. The system requires the patient to regulate his diet and habits carefully. It has led to a more accurate study of the materia medica. Introduced into England, 1827. The Hahnemann hospital was opened in Bloomsbury-square, 16 Sept. 1850. "The World's Convention of Homoeopathic Physicians" opened at Philadelphia, 26 June, 1876. London School of Homoeopathy, founded 15 Dec. 1876. Under the heading *Odium Medicum*, many controversial letters from allopaths and homoeopaths appeared in the *Times*, Jan. 1888.

**HOMOUSION AND HOMOIOUSION** (*Greek*, same essence, and similar essence or being), terms employed with respect to the nature of the Father and the Son in the Trinity. The orthodox party adopted the former term as a party cry at the council of Nice, 325; the Arians adopted the latter at Seleucia, 359.

**HOPS** are said to have been introduced into England from Flanders in the early part of the 16th century, and to have been much cultivated in Kent by Reginald Scot in the 16th century. In the year ending 5 Jan. 1853, there were 46,157½ acres under hops in England and Wales, chiefly in Herefordshire, Kent, and Worcestershire, which paid 447,144l. duty; the quantity yielded was 51,102,494 lbs., whereof 955,855 lbs. were exported; average acreage in England, 59,833, 1885-96; 48,967 in 1905; produce, 695,913 cwt. The duty on hops was repealed in 1862, after many applications. An act for preventing fraud in the trade was passed in June, 1866.—The hop and malt exchange, Southwark, was opened in Oct. 1867.

**HORN BOOKS** used in education in England from early times to the 18th century, were tablets on which were inscribed the alphabet, the nine digits, etc., protected by a thin plate of transparent horn. Great variety of forms, now very rare. Four were exhibited at the Caxton exhibition, 1877, and nine at the loan exhibition of the Horner's company, 1882. Mr. Andrew Tuer's handsome and exhaustive "History of the Horn book," dedicated to queen Victoria by command, was published, May, 1896.

**HORN; HORNPIPE**. The horn is thought to be, next to the reed, the earliest wind instrument, and has been found among most savage nations. It was first made of horn, hence the name; afterwards of brass, with keys, for the semi-tones, in the last century.—The dance called the Hornpipe is supposed to be so named from its having been performed to the Welsh *pih-corn*, that is hornpipe, about 1300. *Spencer*. Many hornpipes were composed in the 18th century. The "College hornpipe" was very popular.

**HORNE TOOKE**, &c. The trial of Messrs. Hardy, Tooke, Joyce, Thelwall, and others, on a charge of constructive high treason, caused a great sensation. They were taken into custody on 20 May 1794. Mr. Hardy was tried 29 Oct., and, after a

trial of eight days, was honourably acquitted. John Horne Tooke was tried and acquitted, 20 Nov.; and Mr. Thelwall was acquitted, 5 Dec.; the others were discharged. Acts were passed to prohibit Mr. Thelwall's political lectures in 1795.

**HORNIMAN MUSEUM**, library and gardens, at Forest-hill, London, the gift of Mr. F. J. Horniman (cost over 40,000*l.*), opened by the duke of Fife, 29 June, 1901.

**HOROLOGY**, see *Clocks*. The British Horological institute, Clerkenwell, London, established in 1858, for the benefit of watchmakers, publishes a monthly journal.

**HORSE**. The people of Thessaly were excellent equestrians, and probably first among the Greeks who broke them in for service in war; whence probably arose the fable that Thessaly was originally inhabited by centaurs. "Solomon had 40,000 stalls of horses for his chariots, and 12,000 horsemen," 1014 B.C. 1 *Kings* iv. 26. The Greeks and Romans had some covering to secure their horses' hoofs from injury. "The Horse," by W. Youatt, new edition, 1880. See *Races and Carriages*, 1896.

*British horses*. Their great strength is described by Julius Caesar about 54 B.C. Henry VIII. established a royal stud, and enacted laws to promote the breed of strong horses in certain shires, hence the term *shire horses*; these afterwards became draught or cart horses.

The horse-tax was imposed in 1784. Its operation was extended, and its amount increased, in 1796; and again in 1808. The existing duty upon "horses for riding" only, in England, amounts to about 350,000*l.* per year.

Annual licence duty on horses and mules, 10*s.* 6*d.* each; horse-dealers' licence, 12*s.* 10*s.* (act passed 1869).

Mr. J. S. Rarey, an American, made a great sensation in London by taming vicious and wild horses, and even a zebra from the Zoological Gardens. His system is founded on a profound study of the disposition of the animal, and on kindness. He initiated many illustrious persons in his method (on 20 March, Lord Palmerston and twenty others) binding them to secrecy; from which they were released in June, when his book was reprinted in England without his consent.

He was engaged to instruct cavalry officers and riding masters of the army.

He gave a lecture to the London cabmen, 12 Jan. 1860; and in the same year he received a present of 20 guineas from the Society for the Prevention of Cruelty to Animals.

Mr. Sydney Galvayne, Australian horse-trainer, exhibited and taught his method of training at the Wellington Riding School, London, June, 1890; his patrons included queen Victoria with many peers and military officers.

Great annual *horse-shows* now held annually at the Agricultural-hall, Islington, began.

*Horse-flesh*. An establishment for the sale of it as human food was opened at Paris on 9 July, 1866, with success, and its use as food strongly advocated. About 150 persons (including Sir Henry Thompson and Sir John Lubbock) dined on horse-flesh at the Langham hotel, London.

A great Franco-Anglo-American horse, mule, and donkey banquet was held at Paris.

The sale of horse-flesh, &c., regulation act, passed.

Subscriptions (of 100*l.* each person for five years) to improve the breed of horses, proposed by Earl Calthorpe, headed by the prince of Wales, many nobles and gentlemen, the London General Omnibus Company, and others.

*Horse-shoeing* is very ancient. It is represented on a coin of Tarentum, S. Italy, probably about 300 B.C. Iron and bronze horse shoes have been found in ancient tumuli in France, Germany, Belgium and Britain. "The smith of the court" was an

officer under the early princes of Wales, and the farrier's art was much honoured in mediæval times.—*G. Fleming*.

Goodenough's American horse-shoes, made by machinery, put on cold (patented 1860), were used by the London General Omnibus Company, Oct.-Dec. 1868. The international horse-shoe company for adopting the patent was established early in.

*Horse epidemic* ("epizootic"), from Canada, at New York, Boston, &c., caused much inconvenience.

Scarcity of horses in Britain; a commission of inquiry appointed, Feb., reported (no result) Aug.

[Another commission issued its report Dec. 1837. The queen's plate for races in Great Britain abolished, and the money to be devoted to the improvement of the breed of horses.]

Donovan, winner of the Derby and St. Leger, 1889, destroyed as the result of an accident.

**HORSE GUARDS**. The regiment is said to have been instituted in the reign of Edward VI. 1550, and revived by Charles II. 1661. The first troop of Horse Grenadier Guards was raised in 1693, and was commanded by general Cholmondeley; and the second troop, commanded by Lord Forbes, was raised in 1702. There was a reduction of the Horse and Grenadier Guards, and Life Guards, as now established, were raised in their room, 26 May, 1788. *Philips*. The present edifice called the Horse Guards was erected about 1758. In the front are two small arches, where horse-soldiers, in full uniform, daily mount guard. In the building was formerly the office of the commander-in-chief, now in Pall Mall.

**HOSPITAL SHOPPING DAY.** A scheme organised, Sept. 1903, by a committee, with lord Dunraven as chairman, to augment King Edward's Hospital fund; the king and the prince of Wales as patron and president signifying their approval. Shopkeepers of all classes, to the number of 33,000, were invited to give a certain percentage, according to individual choice, of their takings on a specified day to the fund, and a special appeal was made to the public to make extra purchases to aid the object in view. A large number of firms in the West-end and in other parts of London responded favourably to the proposal. The first "Hospital Shopping Day" took place, 3 Nov. 1903. Receipts to 17 Nov. 1,027*l.*, discontinued.

**HOST, ELEVATION OF THE,** introduced into

Roman Catholic worship, and prostration, said to have been enjoined about 1201. Pope Gregory IX. was the first pontiff who decreed a bell to be rung as a signal for the people to adore the host, 1228. *Rees.*

**HÔTEL DE VILLE,** Paris, the residence of the chief magistrate, the prefect of the Seine, was begun in 1533, and completed, after his own design, by Dominique de Cortona, 1628. Here La Fayette introduced Louis-Philippe, the citizen-king, to the people, Aug. 1830; and here the republic was proclaimed, 26 Feb. 1848. The communists, who had established themselves here, set fire to the building, 24 May, 1871, after their total defeat. The Hôtel was reopened 13 July, 1882.

**HOOR.** The early Egyptians divided the day and night each into twelve hours, a custom adopted by Jews or Greeks probably from the Babylonians. The day is said to have been first divided into hours from 293 B.C. when C. Papius Cursor erected a sun-dial in the temple of Quirinus at Rome. Previously to the invention of water-clocks (*which see*) 158 B.C., the time was called at Rome by public criers. In England, the measurement of time was, in early days, uncertain; one expedient was by wax candles, three inches burning an hour, and six wax candles burning twenty-four hours, said to have been invented by Alfred, A.D. 886; see *Day*. For *Hours of Prayer, Hours, see Breviary*. The *Hour*, daily conservative newspaper, first appeared, 24 March, 1873; last time, 11 Aug. 1876.

**HOUSE DUTY** was imposed in 1695. Its rate was frequently changed till its repeal. It was re-imposed as a substitute for the window-tax, in 1851. The duty was reduced for houses rented at from 20*l.* to 40*l.* to 2*d.*, and for those rented at from 40*l.* to 60*l.* to 4*d.* and 6*d.*, 17 April, 1890. In the year 1872-3 it produced 1,243,818*l.*; in 1875-6, 1,421,052*l.*; 1880, 1,623,000*l.*; 1885, 1,885,000*l.*; 1891, 1,570,000*l.*; 1900-1, 1,720,000*l.*; 1901-2, 1,775,000*l.*; 1902-3, 1,825,000*l.*; 1903-4, 1,925,000*l.* See *Taxes*. *House League*, see *Ireland*, 1886.

Trevelyan's proposal lost in the commons (287 to 173), 13 May, 1874; (268 to 166), 7 July, 1875; (264 to 165), 30 May, 1876; (276 to 220), 29 June, 1877; (271 to 219), 22-23 Feb. 1878; (291 to 226), 4 March, 1879. The object was effected by the act of 1884-5.

Gurney, chairman of the committee, visited the sultan of Morocco, early in 1902, with reference to the carrying out of reforms in prison administration in that country (see *Times*, 27 Sept. 1902). Mr. Tallack, secretary of the society for many years, retired in 1902, succeeded by Mr. E. Grubb. Office: Devonshire-chambers, Bishopsgate-street.

**HOWARD FAMILY**. John Howard, son of Margaret, the heiress of the Mowbrays, was created earl marshal and the 7th duke of Norfolk in 1483. He was slain with his master, Richard III., at Bosworth, 22 Aug. 1485. His son was restored to the earldom of Surrey in 1489; in reward for having gained the victory of Flodden, 9 Sept. 1513, he was created the 8th duke of Norfolk, in 1514. Thomas, the 10th duke, was beheaded for conspiracy against queen Elizabeth on behalf of Mary, queen of Scots, in 1572. Henry Fitzalan Howard, now the 21st duke of Norfolk, and the 15th of the Howard family, premier duke and earl of England and hereditary earl marshal, was born in 1847.

**HUDSON'S BAY**, discovered by Sebastian Cabot, 1512, and re-discovered by captain Henry Hudson, when in search of a north-west passage to the Pacific Ocean, 1610, had been visited by Frobisher. The "governor and company of adventurers of England trading to Hudson's Bay," obtained a charter from Charles II. in 1670. The "fertile belt" was settled by lord Selkirk in 1812. For these territories the bishopric of Rupert's Land was founded, 1849. The charter having expired, the chief part of the company's territories, on the

proposition of earl Granville, the colonial secretary (9 March, 1869), were transferred to the Dominion of Canada for 300,000*l.*, and a right to claim a certain portion of land within fifty years, and other privileges; the company having consented to this, 9 April, 1869. A portion of the people resisted the annexation, and gen. Louis Riel proclaimed independence and seized the company's treasury, Jan. 1870. On 3 or 4 March he tried and shot Thomas Scott, a Canadian, who had escaped from his custody. Col. (afterwards lord) Wolseley conducted a Canadian expedition to the territories (now named Manitoba), and issued a proclamation to the loyal inhabitants, 23 July, saying "our mission is one of peace." Riel was unsupported and offered no resistance. Extensive explorations by Mr. Tyrell, Dr. Bell, and Mr. Henry O'Sullivan, 1893 *et seq.* See *Manitoba and Western Territories*.

**HUE AND CRY**, the old common-law process of pursuing "with horn and with voice," from hundred to hundred, and county to county, all robbers and felons. Formerly, the *hundred* was bound to make good all loss occasioned by the robberies therein committed, unless the felon were taken; but by subsequent laws it is made answerable only for damage committed by riotous assemblies. The pursuit of a felon was aided by a description of him in the *Hue and Cry*, a gazette established for advertising felons in 1710. *Ashe*.

**HUGUENOTS**, a term (derived by some from the German *Eidgenossen*, confederates; by others from Hugues, a Genevese Calvinist) applied to the Reformed party in France, followers of Calvin. They took up arms against their persecutors in 1561. After a delusive edict of toleration, a great number were massacred at Vassy, 1 March, 1562, when the civil wars began, which lasted with some intermission till the edict of Nantes in 1598 (revoked in 1685). The massacre of St. Bartholomew's day, 24 Aug. 1572, occurred during a truce; see *Calvinists, Protestants, Bartholomew, Edict, and Camisard*. S. Smiles's "History of the Huguenots," appeared in 1867. The crypt in Canterbury cathedral, assigned to French protestants in 1550, is still used by them for divine worship.

The first Hulsean lectures were given by the rev. Christopher Benson, in 1820.

**HUMAITÁ**, a strong post on the river Paraguary, fortified at a great cost with a battery of 300 cannon, by Lopez, the president of Paraguay, and believed to be impregnable, was passed by the Brazilian ironclads, 17 Feb. 1868. On the 19th, Caxias, the Brazilian general, stormed a work to the north of Humaitá, and captured many stores. Humaitá itself, after a severe siege, was abandoned, 24 July, 1868.

**HUMANE SOCIETY, ROYAL** (London), for the recovery of persons apparently drowned, was founded in 1774, by Drs. Goldsmith, Heberden, Towers, Lettsom, Hawes, and Cogan, but principally by the last three. The society has above 280 depôts supplied with apparatus. The principal one was erected in 1794, on a spot of ground given by George III. on the north side of the Serpentine river, Hyde-park. The motto of this society is appropriate—"Lateat scintillula forsan"—"a small spark may perhaps lie hid." Nearly 500 persons were relieved in 1887; 544 in 1890; 536 persons rewarded for bravery. 580 lives saved in 1894; 527 rewards; 812 lives saved in 1895, 800 rewards; 650 lives saved, 716 rewards in 1897. See *Drowning*, and *Lisbon*, Dec. 1890.

**HUMANISM**, a name given to the philosophical study of man's personality as distinguished from a class, especially advanced by Petrarch and other energetic advocates of the revival of the study of ancient classic literature, termed the "new

learning," and ("litera humaniores") the age of the *renaissance*, in the 14th, 15th, and 16th centuries, whereby freedom of thought and language was greatly promoted.

**HUMANITARIANS**, a small sect in London, founded by Mr. Kaspary, a German Jew. Their moral principles are set forth in "The Fifteen Doctrines of the Religion of God," written in 1866. These include pantheism and transmigration of souls. Meetings of the Humanitarian league held in London, 1895 *et seq.* Their monthly organ is termed "Humanity." See *Positive Philosophy*.

**HUMMING BIRDS**. Mr. Gould's beautiful collection of the skins of these birds exhibited at the Zoological Gardens, London, in 1851, was bought with other birds for the British museum for 3000*l.*, April, 1881. His elaborate work on them in five folio volumes, with richly coloured plates, was completed in 1862.

**HUNDRED**, a Danish institution, was a part of a shire, so called, as is supposed, from its having been composed of a hundred families, at the time the counties were originally divided, about 897. The hundred-court is a court-baron held for all the inhabitants of a hundred instead of a manor.

**HUNDRED DAYS**: a term given to Napoleon's restoration, dating from his arrival in Paris, 20 March, to his departure on 29 June, 1815.

**HUNDRED YEARS' WAR**, in French history, commenced with the English invasion in 1337.

**HUNGARY**, part of the ancient Pannonia and Dacia, was subjected to the Romans about 106, and retained by them till the 3rd century, when it was seized by the Goths, who were expelled about 376 by the Huns. See *Huns*, and *Attila*. After Attila's death, in 453, the Gepidae, and in 500 the Lombards held the country. It was acquired by the Avars about 568, and retained by them till their destruction by Charlemagne in 799. About 890 the country was settled by a Scythian tribe, named Vengours or Ungri (whence the German name *Ungarn*) and the Magyars of Finnish origin. The chief of the latter, Arpad (889), was the ancestor of a line of kings (see *below*). The progress of the Magyars westward was checked by their defeat by the emperor Henry the Fowler, 934. **HUNGERFORD BRIDGE**, over the Thames from Hungerford-stairs to the Belvedere-road, Lambeth, opened 1 May, 1845, was taken down in July, 1862, to make way for the Charing-cross railway-bridge, and transferred to Clifton (*which see*). The market (opened in July, 1833) was removed at the same time.

**HUNS**, a race of warlike Asiatics, said to have conquered China, about 210 B.C., and to have been expelled therefrom about A.D. 90. They invaded Hungary, about 376, and drove out the Goths. Marching westward, under Attila, they were thoroughly beaten at Chalons by the consul Aëtius, 451; see *Attila*.

**HUSSARS**, Hungarian militia, provided by the landholders; instituted by Matthias Corvinus, about 1359. (Hussar is derived from *huss*, 20; and *ar*, price.) The British Hussars were enrolled in 1759.

**HUSSITES**. After the death of Huss,\* many of his followers took up arms, in 1419, and formed a political party under John Ziska, and built the city of Tabor. He defeated the emperor Sigismund, 11 July, 1420, and a short truce followed. Ziska, blinded at the siege of Rabi, beat all the armies sent against him. He died of the plague, 18 Oct. 1424, and is said to have ordered a drum to be made of his skin to terrify his enemies even after death. Two Hussite generals, named Procopius, defeated the imperialists in 1431; and a temporary peace ensued. Divisions took place among the Hussites, and on 30 May, 1434, they were defeated, and Procopius the elder slain at Böhmischbrod or Lippau. Toleration was granted by the treaty of Iglau, and Sigismund entered Prague 23 Aug. 1436. The Hussites opposed his successor, Albert of Austria, and called Casimir of Poland to the throne; but were defeated in 1438. A portion of the Hussites existed in the time of Luther, and were called "Bohemian brethren."

**HUSTINGS** (said to be derived from *house court*, an assembly among the Anglo-Saxons), an ancient court of London, being its supreme court of judicature, as the court of common council is of legislature. The court of *hustynge* was granted to the city of London, to be holden and kept weekly, by Edward the Confessor, 1052. One was held to outlaw defaulters, Guildhall, London, 6 Dec. 1870; others in 1882 and 7 July, 1896. Above 4,000 will are on the roll of the court, commencing with the 3rd year of king Henry III. Winchester, Lincoln, York, &c., were also granted hustings courts.

**HUTCHINSONIANS** included many eminent clergy, who did not form any sect, but held the opinions of John Hutchinson, of Yorkshire (1674-1737); they rejected the Newtonian system, and contended that the scriptures contain a complete system of natural philosophy. His work, "*Moses' Principia*," was published in 1724. He derived all things from the air, whence, he said, proceeded fire, light, and spirit, types of the Trinity. In 1712 he invented a time-piece for finding the longitude. He died in 1737.

\* The clergy having instigated the pope to issue a bull against heretics, John Huss (born in Bohemia in 1373), a zealous preacher of the Reformation, was cited to appear before a council of divines at Constance, the emperor Sigismund sending him a safe-conduct. He presented himself accordingly, but was thrown into prison, and after some months' confinement was adjudged to be burned alive, which he endured with resignation, 6 or 7 July, 1415. Jerome of Prague, his intimate friend, who came to this council to support and second him, also suffered death by fire, 30 May, 1416, although he also had a safe-conduct.

**HYDERABAD** (S. India), the territory of the Nizam (the greatest mahometan potentate in India), who derives his authority from Azof Jah, a chief under Aurungzebe, who made him viceroy as Nizam-ool-Moolk, regulator of the state. He died in 1748. Pop. 1881, 9,845,594; 1891, 11,537,000; 1901, 11,141,142; city and suburbs, 448,466. Civil war between his descendants ensues . . . 1748-65

**HYDRAULIC PRESS**, see under *Hydrostatics*.

**HYDROCHLORIC ACID** or **CHLORHYDRIC ACID**, the only known compound of chlorine and hydrogen, was discovered by Dr. Priestley, 1772; its constitution determined by Davy, 1810. It is also called muriatic acid and spirit of salt; see under *Alkalies*.

**HYDROGEN** (from *hydōr*, water). Paracelsus observed a gas rise from a solution of iron in oil of vitriol, about 1500; Turquet de Mayerne discovered its inflammability, 1656; as did Boyle, 1672; Lémery noticed its detonating power, 1700. In 1766 Cavendish proved it to be an elementary body; and in 1781, he and Watt first showed that in the combination of this gas with oxygen, which takes place when it is burnt, water is produced; subsequently Lavoisier decomposed water into its elements, and gave hydrogen its present name instead of "inflammable air." One volume of oxygen combines with two volumes of hydrogen to form water. Hydrogen is never found in the free state.

In 1877, Cailletet and Wroblewski obtained by rapid expansion of the compressed gas, a condensation or mist, which was supposed to be produced by the liquefaction of hydrogen. Olszewski had seen a few drops of an unknown liquid falling in a glass tube and remaining for a few instants unevaporated, subsequently proved to be due to impurities. Prof. Dewar's paper on "The Density of Hydrogen in Palladium" was published in 1873; "The Absorption of Hydrogen by Palladium at high temperatures, pressures, etc." was published in 1897. On 10 May, 1898, at the Royal Institution, he produced half a wine-glassful of liquefied hydrogen at 240 deg. centigrade (below zero) in 5 min., and on the 12th he doubled the quantity. On the 12th he reported it to the Royal Society, and on the 16th to the French Academy. By means of this liquid he also, on the 10th, liquefied a mixture of helium and other gas or gases.

Lecture on liquid hydrogen at the Royal Institution, 20 Jan. 1899; further researches: boiling point by exhaustion, 15° of absolute temperature; liquid hydrogen exhibited boiling in a vacuum tube immersed in liquid air, 21° absolute temperature; and experiments with liquid hydrogen and the vitality of seeds; see *Athenæum*, 16 Dec. 1899; hydrogen obtained in the solid state by prof. Dewar, 16° absolute scale, reported, Jan. 1900.

**HYDROGENIUM**, a hypothetical metal. In a paper read before the Royal Society, 7 Jan. 1869, Mr. Thomas Graham, master of the Mint, suggested that a piece of the metal palladium, into which hydrogen had been pressed, became an "alloy of the volatile metal hydrogenium."

**HYDROGRAPH**, an apparatus invented by capt. Neale, for transmitting sound by water, for the purpose of signalling between ships, lighthouses, &c.; it consists of a transmitter, a receiver, and electric recorder; experiments were made on the Solent under the auspices of the Trinity Board.—*Times*, 19 Oct. 1893.

**HYDROGRAPHY** is the description of the surface waters of the earth. The first sea-chart is attributed to Henry the Navigator, in the 16th century. There is a hydrographic department in the British admiralty, by which a series of charts has been issued. International Hydrographic and Biological congress meets at Stockholm, 15 June, 1899. See *China*, May, 1903.

**HYDROMETER**, the instrument by which is measured the gravity, density, and other properties of liquids. The oldest mention of the hydrometer occurs in the 5th century, and may be found in the letters of Synesius to Hypatia; but it is not improbable that Archimedes was the inventor of it, though no proofs of it are to be found. *Beekmann*. Archimedes was killed in 212 B.C., and Hypatia was torn to pieces at Alexandria, A.D. 415. "Hypatia," by the rev. Charles Kingsley, appeared in 1853. Robert Boyle described a hydrometer in 1675: Baumé's (1762) and Sykes', about 1818, have been much employed. Modifications of the apparatus have been invented.

**HYDROPATHY**, a term applied to the treatment of diseases by cold water, practised by Hippocrates in the 4th century B.C., by the Arabs in the 10th century A.D., and revived by Dr. Currie in 1797. A system was suggested in 1825 by Vincenz Priessnitz, of Grafenberg, in Austrian Silesia. The rational part of the doctrine was understood and maintained by Dr. Sydenham, before 1689. Priessnitz died 26 Nov. 1851.

A grand hydropathic establishment at Bushey, Herts, opened, 13 Feb. 1883. Many others exist throughout the kingdom.

Peebles hydropathic, erected in 1878 at a cost of 100,000*l.*, destroyed by fire, 7 July, 1903.

**HYDROPHOBIA**, in man, rabies in animals. M. Pasteur announced his discovery of a method of checking this disease, analogous to vaccination, the system afterwards applied to various diseases.

He operates on monkeys and other animals successfully, May, on dogs, Aug. 1884; on 40 persons 14 Dec. 1885. An international hospital, afterwards termed the Pasteur institute, founded (40,000*l.* subscribed) May, 1886; opened by president Carnot, 14 Nov. 1888. Out of 726 cases treated, 4 deaths reported 12 April, 1886; 1673 persons treated, 1 May, 1888, to 1 May, 1889. The principle much opposed 1886-7. A British commission for inquiry (sir James Paget, Dr. Burdon Sanderson, and others) appointed 12 April, 1886; visits Paris, and reports confidence in M. Pasteur's treatment, 27 June, 1887. M. Pasteur proposes and verifies other applications of his principles, 1887-8. The book, "M. Pasteur, Histoire d'un Savant," was published in 1883; and an English translation by lady Claud Hamilton in 1885.

Reported number of patients by M. Pasteur (he died 28 Sept. 1895) since 1885, 6,950, to 28 June, 1889; 1,830 patients, 7 deaths in 1889; 1,520 patients, 5 deaths, in 1895; 1,308 patients, 4 deaths in 1896; 1,521 patients, 6 deaths in 1897; 1,614 patients,

4 deaths in 1899; 1,321 patients, 8 deaths in 1901; 1,105 patients, 2 deaths in 1902. The 8th institute in France opened at Lyons, 1 Jan. 1900; many in other countries; one at Kasauli, India, opened 1900, reported very successful,

" Meeting at the mansion house, London, to support the Pasteur institute, 1 July; above 2,000*l.* subscribed, 2 Oct. 1889; Mdme. Hirsch presents 2,000,000 francs, Jan. 1897 (died 2 April, 1899). Rabies stamped out by isolation and quarantine of dogs from abroad. Preventive measures, 1895 et seq. Hydrophobia microbe discovered by prof. Sormani 1 Jan. 1903. Mr. J. Colevin, prominent shipbuilder of Victoria (B.C.), dies of hydrophobia, 2 Jan. 1905, from the effect of the bite of a wolf in Sept. 1904. Stated to be the first recorded case of hydrophobia in British Columbia.

See *Mansion House Funds*.

**ICONOCLASTS** (image-breakers). The controversy respecting images (which had been introduced into churches for popular instruction about 300) was begun about 726, and occasioned much disturbance and loss of life in the Eastern Empire. Leo Isauricus published two edicts for demolishing images in churches in that year, and enforced them with great rigour in 736. The defenders of images were again persecuted in 752 and 761, when Constantine forbade his subjects becoming monks. The worship of images was restored by Irene in 780.

This schism was the occasion of the second council of Nice, 787. Theophilus banished all the painters and statuary from the Eastern Empire, 832. The Iconoclasts were finally excommunicated at the 8th general council at Constantinople, 869-870. This controversy led to the separation of the Greek and Latin churches. Many images in churches were destroyed in Scotland and the Netherlands in the 16th century, and in England during the Reformation and the civil war, 1641-8.

**IMPOSTORS**. The following are among the most extraordinary:—

Aldebert, a Gaul, in 743, pretended he had a letter from the Redeemer, which fell from heaven at Jerusalem: he seduced multitudes to follow him into woods and forests, and to live in imitation of John the Baptist. He was condemned by a council at Rome in 745.

Gonzalvo Martin, a Spaniard, pretended to be the angel Michael in 1359: he was burnt by the inquisition in Spain in 1360.

George David, son of a waterman at Ghent, styled himself the son of God, sent into the world to adopt children worthy of heaven: he denied the resurrection, preached in favour of a community of women, and taught that the body only could be defiled by sin: he had many followers; died at Basle, 1556, promising to rise again in three years.

Otreff, a monk, pretended to be Demetrius the son of Ivan, czar of Muscovy, whom the usurper Boris had put to death; he maintained that another child had been substituted in his place: he was supported by Poland; his success led the Russians to invite him to the throne, and deliver into his hands, Feodor, the reigning czar, and all his family: his imposition discovered, he was assassinated in his palace, 1666.

Sabbata Levi, a Jew of Smyrna, amused the Jews and Turks a long time at Constantinople and other places, by personating our Saviour, 1666.

Joseph Smith, see *Mormonites*.

Apparition of our Lady of Salette: the imposture exposed and several persons prosecuted, April, 1846. The superstition revived and flourishing, Aug. 1872.

Pilgrimage of about 20,000 persons to Lourdes, in the Pyrenees, on account of alleged miracles (the virgin was said to have appeared to two girls, 11 Feb. 1858). 6 Oct. 1872; see *France*.

Insurrection of the Mahdi, see *Soudan* 1881 *et seq.*

An adventurer, who named himself "Comte Blanco," and "prince Louis Marie César of Bourbon, grandson of Ferdinand VII. of Spain," was recognised at Paris in 1866 by queen Isabella and others. Detected by a photographer as his son-in-law. Supported by a rich English widow. Kept a small court at Jurangon near Pau, as a king. Deposed and expelled by the police, he went to Holland and England, and died in London.

John Smith Pigott, leader of the Agapemone (*which see*), claimed to be the Messiah; riotous scenes at Clapton . . . Sept. 1902-1905

Dr. Dowle, head of the Zionists (*which see*), professes to be the "Second Elijah," *see Zion Restoration Host*, conducts campaign in New York, Oct. 1903; visits London; encounters strong opposition, and leaves precipitately (*see Zionists*) Nov. 1903. [See *Abstinence*, and *Sugar*.]

## IN BRITISH HISTORY.

A man pretending to be the Messiah, and a woman assuming to be the Virgin Mary, were burnt, 1222.

Jack Cade assumed the name of Mortimer; *see Cade*, 1450.

In 1487, Lambert Simnel, tutored by Richard Simon, a priest, supported by the duke of Burgundy, personated the earl of Warwick. Simnel's army was defeated by Henry VII., and he was made a scullion in the king's kitchen.

For Warbeck's imposture in 1492, *see Warbeck*.

Elizabeth Barton, styled the Holy Maid of Kent, spirited up to hinder the Reformation by pretending to inspirations from heaven, foretelling that the king would have an early and violent death if he divorced Catherine of Spain and married Anne Boleyn. She and her confederates were executed at Tyburn, 21 April, 1534.

In 1553 (first year of Mary's reign, after her marriage with Philip of Spain), Elizabeth Croft, a girl 18 years of age, was secreted in a wall, and with a whistle made for the purpose, uttered many seditious speeches against the queen and the prince, and also against the mass and confession, for which she did penance.

William Hacket, a fanatic, personated our Saviour, and was executed for blasphemy, 1591.

Valentine Greatrix, an Irish impostor, who pretended to cure all diseases by stroking the patient; his imposture deceived the credulous, and occasioned very warm disputes in Ireland and England about 1666. Boyle and Flansted believed in him.

Dr. Titus Oates, *see Oates*.

Robert Young, a prisoner in Newgate, forged the hands of the earls of Marlborough, Salisbury, and other nobility, to a pretended association for restoring king James: the lords were imprisoned, but the imposture being detected, Young was fined 1000*l.*, and put in the pillory, 1692. He was afterwards hanged for coining.

Three French refugees pretend to be prophets, and raise tumults; convicted as impostors, Nov. 1707.

Mary Tofts of Godalming, by pretending she bred rabbits within her, so imposed upon many persons (among others, Mr. St. Andre, surgeon to the king), that they espoused her cause, 1726.

The Cock-lane ghost impostures by William Parsons, his wife, and daughter, 1762; *see Cock-lane Ghost*.

Johanna Southcote, who proclaimed her conception of the Messiah, and had a multitude of followers; she died 27 Dec. 1814.

W. Thom, *see Thomites*.

Louis XVII., *see France*, list of sovereigns.

**IMPRESSIONISTES**, a name given to artists who aim at producing rapid unstudied effects independent of the canons of art, such as Manet, Ducez, and others in France. In England Mr. Whistler exhibited such pictures in 1877, including moonlight scenes, &c., painted in two days, showing great sense of colour. For Mr. Ruskin's criticisms *see Trials*, 1878. The Impressionistes are also characterized as illustrators of their own times by pure art; MM. Manet, Durand, Ruel, Degans, and Renoir, are French examples; they exhibited in London in June, 1882 and since, especially in April, 1889.

**IMPRESSMENT OF SEAMEN**, affirmed by sir M. Foster to be of ancient practice. The stat. 2 Rich. II. speaks of impressment as a matter well known, 1378. The first commission for it was issued 29 Edw. III. 1355. Pressing, either for the sea or land service, declared to be illegal by the parliament, Dec. 1641, but practised till present times. Impressment was not resorted to in the Russian war, 1854-5.

**IMPRISONMENT FOR DEBT**, *see Arrests, Debtors, and Ferrars' Arrest*.

**IMPROPRIATION** (applying ecclesiastical property to lay purposes). On the suppression of

abbeys in 1539, their incomes from the great tithes were distributed among his courtiers by Henry VIII.; and their successors constitute 7597 lay impropiators.

**INCAS**, *see Peru*.

**INCENDIARIES**, *see Arson*.

**INCEST**. Marriage with very near relations, almost universally forbidden, took place in Egypt, Persia, and Greece. For recent cases *see Portugal*, 1760, 1777, and 1826; *Italy*, 1888. The table of kindred in the book of common prayer was set forth in 1563. For the Hebrew law *see Leviticus*, chap. xviii. 1490 B.C.

**INCH**. It was defined in 1824 by act of parliament, that 39.13929 inches is the length of a seconds pendulum in the latitude of London, vibrating in vacuo at the sea level, at the temperature of 62° Fahrenheit; *see Candle*, and *Standard*.

**INCHCAPE BELL**, *see Bell Rock*.

**INCLOSURE ACT**, to facilitate the inclosure and improvement of commons, appointing commissioners, &c., 8 & 9 Vict. c. 118, passed 8 Aug. 1845; another act passed in 1876; *see Commons*.

**INCOME TAX**. In 1512, parliament granted a subsidy of two-fifteenths from the commons, and two-tenths from the clergy, to enable the king to enter on a war with France. In Dec. 1798, Mr. Pitt proposed and carried, amid great opposition, resolutions for increased taxes "as an aid for the prosecution of the war" with France.

Graduated duties on income imposed, beginning with 6*ol.* per annum, by the act passed 9 Jan. 1799.

The "property tax" passed which levied a rate of 5 per cent. on all incomes above 15*ol.* and lower rates on smaller incomes, 11 Aug. 1803.

Increased to 6½ per cent. 1805; 10 per cent., embracing the dividends at the bank, 1806.

In 1800 the tax produced 5,716,572*l.*; in 1804, 4,650,000*l.*; in 1806, 11,500,000*l.*; in 1808, 16,548,985*l.*; in 1815, 14,978,557*l.*; 1900, 18,750,000*l.*

The tax produced from lands, houses, rentages, &c., 8,657,937*l.*; from funded and stock properties, 2,885,505*l.*; the profits and gains of trade, 3,831,088*l.*; and salaries and pensions, 1,174,456*l.* Repealed 18 March, 1816, on motion of H. Brougham.

Sir Robert Peel's bill imposing a tax at a rate of 7*d.* in the pound (i.e. 18*s.* 4*d.* per cent.) on annual incomes of 15*ol.* and upwards (for three years) passed 22 June, 1842.

It produced about 5,350,000*l.* a-year; and led to repeal of about 12,000,000*l.* indirect taxes.

Renewed for three years, 1845; and 1848.

Large meetings assembled in Trafalgar-square, London (for the ostensible purpose of opposing the income tax); rioting ensued, which was soon quelled, 6, 7 March, 1848.

Tax continued for one year in 1851 and 1852.

The tax of 7*d.* limited to seven years (till 1860): to be gradually reduced in amount; but all incomes from 10*ol.* to 15*ol.* made liable to 5*d.* in the pound for all that period: the tax also extended to Ireland, June, 1853.

Crimean war: rates doubled, 14*d.*, 1854.

2*d.* (making 16*d.*) added to the tax on incomes above 15*ol.*, and 14*d.* on those between 10*ol.* and 15*ol.*; the former being 1*s.* 4*d.*, the latter 114*d.* in the pound, 1855. The former assessment reduced to 7*d.*, the latter to 5*d.*, 1857. Both became 5*d.*, 1858.

The former raised to 6*d.*, the latter to 6½*d.*; and the tax on incomes, derived from lands, tenements, &c., raised from 3½*d.* to 5½*d.* for England, and from 2½*d.* to 4*d.* for Scotland and Ireland, July, 1859.

The assessment on incomes raised—on those above 10*ol.* to 7*d.*; on those above 15*ol.* to 10*d.*

[The object of the increase was to provide for a deficiency occasioned by extra expenditure for defending the country, April, 1860.]

A committee to inquire into the working of the income tax appointed, 14 Feb. 1861.

Reduction of the last assessment from 7d. to 6d., and from 10d. to 9d. for three-quarters of the financial year 1861-62.

INDEMNITY BILL, by which the minister of the crown or the government is relieved from the responsibility of measures adopted in extreme and urgent cases, without the previous sanction of parliament. One was passed 19 April, 1801; another to indemnify ministers against their acts during the suspension of the *Habeas Corpus* act, was carried in the commons (principal divisions, 190 to 64); and in the lords (93 to 27), 10 March, 1818. In 1848 and 1857, bills of indemnity were passed for the suspension of the Bank Charter act by the ministry; see *Oblivion*. An indemnity bill is passed at the end of every session of parliament for persons who transgress through ignorance of the law. The practice began in 1715.

Antoine, to include the plays of Ibsen and Tolstoi which could not be licensed in this country. As the theatre is supported by subscription, and no money taken at the doors, it is considered independent of the lord chamberlain's censorship in regard to the plays performed. Ibsen's "Romersholm" was performed 23 Feb. and his "Ghosts" 13 March, 1891. **INDEPENDENTS or CONGREGATIONAL-  
ISTS**, hold that each church or congregation is  
independent of all others in religious matters; that  
there is no absolute occasion for synods or councils,  
whose resolutions may be taken for advice, but not  
as decisions to be peremptorily obeyed; and that one  
church may advise or reprove another, but has  
no authority to excommunicate. Robert Brown  
preached these doctrines about 1585, but, after 32  
imprisonments, he eventually conformed to the  
established church. A church was formed in Lon-  
don in 1593, when there were 20,000 independents.  
They were driven by persecution to Holland, where  
they formed several churches; that at Leyden was  
under Mr. Robinson, often regarded as the author  
of Independency. In 1616 Henry Jacobs returned  
to England and founded a meeting-house. Crom-  
well, himself an independent, obtained them toler-  
ation, in opposition to the Presbyterians. The  
independents published an epitome of their  
faith, drawn up at a conference at the Savoy, in  
1658; and the congregational union of England  
and Wales formed in 1831, published their "de-  
claration of faith, order, and discipline," in 1833.  
In 1851 they had 3244 chapels for 1,067,760 per-  
sons in England and Wales; in 1902 United King-  
dom, 4,891 churches; 3,152 ministers; 1,754,089  
sittings, 462,678 church members, 1902. Annual  
meetings of the union are held; see *Worship*. The  
first independents in Scotland were the Glasites  
(*which see*). The first independent church in  
America was founded by the followers of John  
Robinson, at Plymouth, New England, in 1620.

**INDEXES OF PROHIBITED BOOKS.**  
The Index by which the reading of the Scriptures

was forbidden (with certain exceptions) to the laity,  
was confirmed by a bull of pope Clement VIII. in  
1595.

The council of Nice (325) forbade magical books.  
Pope Paul IV., 1555, began the "Index" published by  
Pius IV., 1559. The Talmud and heretical books were  
especially prohibited, causing much dissatisfaction.  
The Inquisition was engaged in the work, which was  
organized by the Council of Trent. The Congregation  
of the Index was instituted and rules laid down.

The Indexes are—1. *Prohibitorius*, of books absolutely  
forbidden to be read; 2. *Expurgatorius*, of books not  
to be licensed till purged from error.

Many of the works of the great authors of France,  
Spain, Germany, and England, are thus prohibited.  
On 25 June, 1864, Hugo's "Les Misérables" and  
other books were added to the number, and many  
others since.

**INDEX SOCIETY**, established by the libra-  
rians of various London scientific and literary  
institutions and societies, and literary men, to form  
a library of indexes, and to make indexes to rare  
serial works, important books, &c., 17 Dec. 1877.

**INDIA or HINDOSTAN.** The Hindoo his-  
tories ascribe its origin to a period ages before  
the ordinary chronologies. The Tyrians, Egyptians,  
and Romans carried on commerce with India.

The expansion, consolidation, and conciliation of  
India were greatly effected during the reign of  
queen Victoria, 1837 *et seq.* 117 native states 1888.\*

\* On the introduction of the improved (Enfield) musket  
 in the Indian army, greased cartridges had been  
 brought from England. These were objected to by the  
 native soldiers, and the issue of them was immediately  
 discontinued by orders in Jan. 1857. A mutinous spirit  
 however gradually arose in the Bengal native army.  
 In March several regiments were disbanded, followed  
 by others, till the army had lost by disbandment  
 and desertion, about 30,000 men. On 5 April, a sepoy,  
 and on 20 April, a jemadar, or native lieutenant, were  
 executed. At the end of May 34 regiments were lost.  
 In April, 85 of the 3rd Bengal native cavalry at Meerut  
 refused to use their cartridges. On 9 May they were  
 committed to gaol. On Sunday, the 10th, a mutiny in  
 the native troops broke out; they fired on their officers,  
 killing col. Finnis and others. They then released their  
 comrades, massacred many Europeans, and fired the  
 public buildings. The European troops rallied and drove  
 them from their cantonments. The mutineers then fled  
 to Delhi (*which see*).

† At the end of June the native troops at the follow-  
 ing places were in open mutiny: Meerut, Delhi, Ferozepore,  
 Allyghur, Roorkie, Murdaun, Lucknow, Cawnpore,  
 Nussurahad, Neemuch, Hansi, Hissar, Jhansi, Mehidpore,  
 Jallundur, Azzinghur, Futtcheghur, Jaunpore, Bareilly,

 italics, European women and children were massacred.

 the ministry, a vote of censure being moved for in both

**INDIA COMPANY, EAST.** The first commercial intercourse of the English with the East Indies was a private adventure of three ships fitted out in 1591. Only one of them reached India; and, after a voyage of three years, the commander, captain Lancaster, was brought home in another ship, the sailors having seized his own; but his information gave rise to a mercantile voyage, and the establishment of a company, whose first charter, in Dec. 1600, was renewed in 1609, 1657, 1661, 1693, and 1744. Its stock in 1600 consisted of 72,000*l.*, when it fitted out four ships. Meeting with success, it continued to trade, and India stock sold at 500*l.* for a share of 100*l.* in 1683. "East India," vols. i. and ii. 1898.

A new company (the "English") was chartered 5 Sept. 1608, and the old (the "London") suspended from trading for three years; the two were united 1702

New East India company established . . . . . 1706

Privileges of the company continued till 1783 . . . . . 1744

Affairs of the company were brought before parliament, and a committee exposed a series of intrigues and crimes . . . . . Aug. 1772

As remedial measures two acts passed (one authorised a loan of 1,000,000*l.* to the company; the other celebrated as the *India bill*), effected most important changes in the constitution of the company and its relations to India. A governor-general was appointed to reside in Bengal, to which the other presidencies were then made subordinate; a supreme court of judicature was instituted at Calcutta: the salary of the governor was fixed at 25,000*l.* per year; that of the council at 10,000*l.* each; and of the chief judge at 8000*l.*; the affairs of the company were controlled; all the departments were re-organised, and all the territorial correspondence was henceforth to be laid before the British ministry . . . . . June, 1773

Mr. Pitt's bill appointing the Board of Control (which see), passed . . . . . 18 May, 1784

The company's charter was renewed for 20 years . . . . . 1793

Trade with India thrown open . . . . . 1813

Trade to China opened; Charter renewed till 1854 . . . . . 1813

The government of India was continued in the hands of the company till parliament should otherwise provide . . . . . 1853

In consequence of the mutiny of 1857, and the disappearance of the company's army, the government of India was transferred to the crown, the Board of Control was abolished, and a Council of State for India instituted by the act 21 & 22 Vict. c. 106, which received the royal assent 2 Aug. 1858

The company's political power ceased on 1 Sept., and queen Victoria was proclaimed as Queen of Great Britain and the Colonies, &c., in the principal places in India, amid much enthusiasm 1 Nov. "

\* Lord Palmerston brought in a bill for the purpose on 12 Feb., which was accepted by the house on 18 Feb. He resigned on the following day, and the bill dropped. A similar bill was introduced by Mr. Disraeli on 12 March; but many of its details being objected to, it was withdrawn. On lord John Russell's proposition, the house proceeded to consider the matter by way of resolutions; on 17 June, lord Stanley brought in the above-mentioned bill, being the third on the subject introduced during the session.

The company to be dissolved, 1 June, 1874, and dividends redeemed, by the "East India Stock Dividend Redemption Act," passed . . . 15 May, 1873

During the American civil war in 1861, the Choctaws joined the confederates, who permitted two Choctaw delegates to sit in congress; the first being Sampson Folsom and Eastman Loman; but the principal chief of the Cherokees, on 4 May, 1861, issued a proclamation of neutrality, which was maintained with great difficulty. In a war provoked by outrages general Sheridan defeated the Indians, and they surrendered unconditionally Dec. 1868. - INDICTION,** a Roman term originally applied to a tribute of corn, paid every fifteen years, and to the time at which it was paid. The first examples in the Theodosian code are of the reign of Constantius II., who died 361.—In memory of the great victory obtained by Constantine over Maxentius, 8 Cal. Oct. 312, the council of Nice ordained that the accounts of years should be no longer kept by the Olympiads, but by the Indiction, which has its epocha 1 Jan. 313. It was first used by the Latin church in 342.
- INDIGO,** the dye obtained from the wood plant, *isatis tinctoria*, was used by the Egyptians, and other ancient nations; and the processes are described by Pliny. After the passage of the Cape of Good Hope, in 1497, it was gradually superseded by the eastern indigo, got from the *indigofera*. The mention of indigo occurs in English statutes in 1581. Its cultivation was begun in Carolina in 1747. The quantity imported into Great Britain in 1840 was 5,831,269 lbs.; in 1850, 70,482 cwt.; in 1861, 83,109 cwt.; in 1871, 106,307 cwt.; in 1881, 81,088 cwt.; in 1890, 81,854 cwt.; 1900, 33,877 cwt.; 1901, 51,359 cwt.; 1904, 20,709 cwt.

After long-continued experiments, especially by prof. A. Baeyer, the dye has been prepared artificially from its chemical elements in coal tar 1869-80  
 Professor H. E. Roscoe, at the Royal Institution, proved that the properties of the artificial and natural indigo were identical . . . 27 May, 1881

**INDIRECT CLAIMS**, see *Alabama, Washington*.

**INDIUM**, a metal discovered in the arsenical pyrites of Freiberg by F. Reich and T. Richter in 1863. Its name is due to its giving an indigo blue ray in its spectrum.

**INDIVIDUALISM**, the principle maintained by Herbert Spencer and others in opposition to too much state control and socialism. "The Coming Individualism," by A. Egmont Hake and O. E. Wesslau, published Jan. 1896.

**INDO-CHINA**, a name given to central Asia. The countries under French government or protection are Annam, Cochin China, Cambodia, and Tonquin. Burmah is subject to Great Britain, and Siam is independent.

**INDORE**, a province of British India; the principal native rulers have been the Mahratta chiefs, named Holkar, rivals of the Scindiahs at Gwalior. Rao Holkar received a grant of territory from the British in 1733. After severe conflicts the Mahratta chiefs were finally quelled in 1818. The town of Indore, founded in 1767, was destroyed by Scindiahs after a battle on 14 Oct. 1801. The maharajah Shivaji Rao Holkar died 17 June, 1886. Succeeded by his son, Tukaji Rao Holkar, who was present at queen Victoria's jubilee in London in 1887. Indore was visited by the viceroy, the marquis of Lansdowne, 24 Nov. 1891. The maharajah Shivaji Rao Holkar in ill-health, abdicated in favour of his son, Tukaji Rao, aged 12, 31 Jan. 1903. Population, 1881, 1,055,217; 1891, 1,091,689; 1901, 850,690.

**INDUCTION** of electric currents, discovered by Faraday, and announced in his "Experimental Researches," published in 1831-2. Ruhmkorff's magneto-electric induction coil was constructed in 1850. See under *Electricity*.

**INDUCTIVE PHILOSOPHY**, based on the results of observations and experiments, really *common sense*, is especially expounded by Bacon in the second book of his "*Novum Organon*," published 1620. Wm. Harvey (1578-1657) endeavoured "to search out the secrets of nature by the way of experiment." See *Blood*.

**INDULGENCES** in the early church were the moderation of ecclesiastical punishment. The papal system for the absolute pardon of sin, commenced by Leo III. about 800, was granted in the 11th century by Gregory VII., and by Urban II., and by others, in the 12th century as rewards to the crusaders. Clement V. was the first pope who made public sale of indulgences, 1313. In 1517, Leo X. published general indulgences throughout Europe, and the resistance to them led to the Reformation.

**INDUSTRIAL FREEDOM LEAGUE**, founded 1903.

**INDUSTRIAL AND PROVIDENT SOCIETIES ACTS**, 1852 and 1862, were amended by acts passed 1867, 1871, and 1876. Acts consolidated in 1893; amended, 1895.

**INDUSTRIAL SCHOOLS ACT**, 21 & 22 Vict. c. 48 (1857) was enacted to make better provision for the care and education of vagrant, destitute, and disorderly children. Another act was passed, 1861. These acts were consolidated by an act passed in Aug. 1866; amended 1894. Forty-seven of these schools had been certified under these acts up to 29 Sept. 1864. The act was extended to Ireland, 1868. England and Wales, 1872, 71 schools (4870 boys, 1516 girls); in 1890, 133 schools; in 1892, 138 schools; 1903, 222 schools.

**INDUSTRIAL SOCIETIES**, see *Co-operative Societies*.

**INDUSTRIAL VILLAGES**, the formation of these by the removal of workmen from towns, was proposed at a meeting of the Society of Arts, 26 June, 1885.

Garden Village Trust established by Mr. Joseph Rowntree at York, Jan. 1905. See *Garden Cities*.

**INDUSTRY**, see *Scientific*. A conference for the christian organisation of industry met in Holborn town hall, 29 Nov. 1893.

**INEBRIATES**, see *Drunkards*.

**INFALLIBILITY OF THE POPE**, in regard to faith and morals, was decreed by the Vatican Council, and promulgated, 18 July, 1870. The doctrine was much opposed in Germany, and led to the constitution of the church named "Old Catholics," *which see*. Mr. Gladstone's pamphlets, "The Vatican Decrees in their bearing on Civil Allegiance," published Nov. 1874, and "Vaticanism," in Feb. 1875.

**INFANTICIDE**, especially female, was very prevalent in barbarous countries. Lord Macartney stated that 20,000 infants were killed annually; it gradually decreased in India. On 12 Nov. 1851, Mr. Raikes induced the Chohan chiefs to agree to resolutions against it, and a great meeting in the Punjab was held for the same purpose, 14 Nov. 1853. Much suspicion was caused in London in 1867 through the deaths of children farmed out to improper persons. The agitation revived, June, 1870. Margaret Waters was convicted of the murder of John Cowen, an illegitimate infant, by poison and neglect, 23 Sept. 1870. She had adopted

about 40 children, receiving a few pounds as premium; in four years many had died. John and Catherine Barns, of Tranmere, near Birkenhead, convicted of manslaughter (see *Trials*), 29 Oct. 1879. The Infant Life Protection act passed 25 July, 1872; amended, 1897. Female infanticide prohibited in China about June, 1873. Amelia E. Dyer, a baby farmer, convicted of the murder of infant children, the bodies having been thrown into the Thames at Reading, 22 May; executed, 10 June, 1896. Two women "baby-farmers" executed at Holloway, 3 Feb. 1903.

**INFANTRY**, foot soldiers; their organisation much improved during the wars of Charles V. and Francis I., in the 16th century. The British army comprised 99 regiments of regular infantry in 1858, when the Canadians raised a regiment termed the 100th. The number 109, beside the rifle brigade until 1881 included the nine regiments formerly in the pay of the East India company, and several colonial corps. In 1871 the principle of localisation, the linking of battalions, and short service, came into operation; in 1881 the existing 109 regiments and the rifle brigade were reorganised forming 71 territorial regiments of the line, each regiment comprising usually 2 battalions of its own and linked battalions of the militia and volunteers. The army scheme of reorganisation introduced by Mr. Brodrick, March 1901, increases the strength of the infantry and raises the number of militia. Marshal Soult (or marshal Bugeaud) said, "The British infantry is the finest in the world: happily there is not much of it." In 1905, 161,035. Mounted infantry were largely and successfully employed in the operations of the war in S. Africa, 1899-1902.

**INFANTS' RELIEF ACT**, passed 7 Aug. 1874, to amend the law relating to contracts made by persons under age.

The powers of wives and widows in respect to the care and training of their children, were somewhat enlarged in 1839, more so in 1873, and very much more by a bill brought in by Mr. James Bryce, read a second time 26 March, 1884.

Guardianship of Infants Act passed, 1886.

**INFANT SCHOOLS** began in New Lanark, Scotland, in 1815; in London in 1818.

**INFECTIOUS DISEASES**. By an act passed 30 Aug. 1889, notification of any person suffering from infectious disease is required to be given by the nearest relative or any person in charge, and also by the medical attendant to the medical officer of health of the district; extension of same act passed, 20 June, 1899. An act to prevent the spread of infectious disease was passed 4 Aug. 1890.

**INFERNAL MACHINES**, see *France*, 1800, 1835, and 1858; *Baltic*, note; *Dynamite*; *Russia*, 1880-1; *Liverpool*, 1881; *Explosives*.

**INFIRMARIES**. Ancient Rome had no houses for the cure of the sick; diseased persons were carried to the temple of Æsculapius for cure. Institutions for the accommodation of travellers, the indigent, and sick were founded by the emperor Julian about 362; and infirmaries or hospitals were frequently built to cathedrals and monasteries. The emperor Louis II. caused infirmaries situated on mountains to be visited, 855. In Jerusalem the knights and brothers attended on the sick. There were hospitals for the sick at Constantinople, in the 11th century. The oldest mention

of physicians and surgeons established in infirmaries occurs in 1437. *Beckmann*; see *Hospitals*. Parish workhouse infirmaries established, 1867.

**INFLUENZA**, a name given in Italy about 1741 to an epidemic febrile catarrh with variations, probably known to the ancients.

It prevailed in Europe in 1510, and has since frequently appeared, generally commencing in Russia and thence spreading over the continent. It appeared in Britain in 1762 and frequently since, especially in 1830-1, 1833, 1836-7, and 1847. It appeared at Paris in 1866-7, and at Berlin, 1874-5. In Oct. 1889, it was severe in St. Petersburg, and thence spread over Europe, reaching Great Britain, Canada and the United States, Jan. 1890, causing indirectly the deaths of several eminent persons. In the spring, the disease was severe in India and Australia. In 1891 the disease was severe in the west of the United States and in London and other parts of England, and also on the Continent. The disease reappeared in Jan. 1892, in much the same localities. In London the general mortality was much increased, all classes being attacked. The death of the duke of Clarence and Avondale, 14 Jan. 1892, was attributed to pneumonia following influenza. Reports of the epidemic of 1889-90, by Dr. Parsons, issued by government, 1891-3. Moderate outbreak in London, Feb. 1893, many cases autumn and winter, 1893-94; epidemic in London; prevalent in United Kingdom and on the continent, many deaths, Feb.-April, 1895. Epidemic in St. Petersburg and S. Russia, March, 1895. Epidemic in London and home counties, Jan., Feb. 1898; again rife in London and Paris, spring, 1899; again in London and other parts, Jan. 1900.

**INFORMERS**, upon penal statutes, compounding with defendants without leave of the court, were punishable with fine and pillory, by 18 Eliz. c. 5 (1576). Their share of a penalty was regulated by 2 & 3 Vict. c. 71 (1839).

**INFUSORIA**, see *Animalcules*.

**INGESTRE HALL**, Staffordshire, destroyed by fire 12 Oct. 1882. It was built in 1676. Many valuable portraits, &c., were destroyed.

**INGOUR**, a river rising in the Caucasus and falling into the Black Sea. Omar Pasha, marching to the relief of Kars, crossed this river on 6 Nov. 1855, with 10,000 men, and attacked the Russians, 12,000 strong, who, after a struggle, retreated with the loss of 400 men. The Turks had 68 killed and 242 wounded. Kars, however, was not saved.

**INK**. The ancient black inks were composed of soot and ivory black, and Vitruvius and Pliny mention lamp-black; but they had ink of various colours, as red, gold, silver, and purple. Red ink was made of vermilion and gum. **INDIAN INK** was brought from China, and must have been in use by the people of the east from the earliest ages. **INVISIBLE**, or **SYMPATHETIC INKS**, were known at early periods. Ovid (A.D. 2) teaches young women to write with new milk. Receipts for preparing invisible ink were given by Peter Borel, in 1653, and by Le Mort, in 1669. *Beckmann*.

**INKERMANN (Crimea)**. The Russian army (about 40,000) having received reinforcements, and being encouraged by the presence of the granddukes Michael and Nicholas, attacked the British (8000) near the old fort of Inkermann, before daybreak, 5 Nov. 1854. They were kept at bay for six hours till the arrival of 6000 French. The Russians were then repulsed, leaving 9000 killed and wounded. The loss of the allies was 462 killed, 1952 wounded, and 191 missing. Sir George Cathcart, and generals Strangways, Goldie, and Torrens, were among the slain. On 15 Nov. 1855, an explosion of about

100,000 lbs. of gunpowder occurred near Inker-mann, and caused great loss of life.

**INNS OF COURT** (London) were established at different periods, in some degree as colleges for teaching the law. Annual revenue in 1872 said to be about 25,000l. See *Barristers*.

**INOCULATION**, see *Small Pox*. Lady Mary Wortley Montagu introduced inoculation from small pox to England from Turkey. In 1718 she had her son inoculated at Adrianople with success. She was allowed to have it first tried in England on seven condemned criminals, 1721; and in 1722 two of the royal family were inoculated. The practice was preached against by many of the bishops and clergy until 1760. Dr. Mead practised inoculation very successfully up to 1754, and Dr. Dimsdale, of London, inoculated Catherine II., empress of Russia, in 1768. Of 5964 who were inoculated in 1797-99, only three died. An inoculation hospital was established in 1746. *Vaccine* inoculation was introduced by Dr. Jenner, 21 Jan. 1799; he had discovered its virtue in 1796, and had been making experiments during the intermediate three years. Inoculation was forbidden by law in 1840. Dr. A. E. Wright's typhoid vaccine elaborated in 1896, introduced in the army, reported, June, 1899; satisfactory results obtained at Ladysmith, 1899-1900, reported, 5 Sept. 1902; see also *Times*, 9 Oct. 1903. See *Vaccination*, *Sheep*, *Hydrophobia*, and *Diphtheria*.

### INQUESTS, see *Coroner*.

**INQUISITION** or **HOLY OFFICE**. Previous to Constantine (306), heresy and spiritual offences were punished by excommunication only; but shortly after his death capital punishments were added, and inquisitors were appointed by Theodosius, 382. Priscillian was put to death in 384 by the emperor Maximus. Justinian decreed the doctrine of the four holy synods as to the holy scriptures and their canons to be observed as laws, 529; hence the penal code against heretics. About 800 the power of the western bishops was enlarged, and courts were established for trying and punishing spiritual offenders, even with death; the punishment being termed in Spain *auto-da-fé*, "an act of faith." In the 12th century many heresies arose, and during the crusades against the Albigenses, Gregory IX., in 1233, established by rules the inquisitorial missions sent out by Innocent III., 1210-15, and committed them to the Dominicans. Pietro da Verona (styled Peter Martyr), the first inquisitor who burnt heretics, assassinated by an accused gonalonier, 6 April, 1252, was canonized.

**INSOLVENCY**. The first insolvent act was passed in 1649, but it was of limited operation; a number of acts of more extensive operation were

passed at various periods, and particularly in the reign of George III. The benefit of the act known as the Great Insolvent Act, was taken in England by 50,733 insolvents from the time of its passing in 1814, to March, 1827, a period of thirteen years. Since then the acts relating to insolvency have been several times amended. Persons not traders, or being traders whose debts are less than 300*l.*, might petition the court of bankruptcy, and propose compositions, and have *pro tem.* protection from all process against their persons and property, by 6 Vict. c. 116 (1842). In 1861, by a new bankruptcy act, the business of the insolvent debtors' court was transferred to the court of bankruptcy; and a number of imprisoned debtors were released in Nov. 1861. See *Bankruptcy*.

**INSPIRATION.** The term used in theology, derived from the Vulgate translation of 2 Tim. iii. 16, to denote the influence of the Holy Spirit upon the mind of the writers of the Scriptures, "which makes these Scriptures the Word of God." Orthodox theologians all ascribe divine assistance to the writers of the books of the Old and the New Testaments, but differ as to its extent, degree, and mode of interpretation. To these are opposed the theologians of the more modern school, who hold that "the Bible is the book which contains the record of God's dealings with a chosen race, and through them with mankind . . . it is the book which contains the gospel of His Son and the lessons of salvation. It is not all of the same value, it is not all written on the same level . . . much of it is written from the imperfect moral and spiritual standpoint of times of ignorance." Others hold that the spirit, ideas, and doctrines of the Bible only are inspired, not the strict form or letter. Prior to the Reformation no definite Church doctrine existed on the subject of inspiration, nor is it a doctrine of the Roman Church. Calovius (1612-1686) advanced the theory, which became the accepted orthodox Protestant doctrine, "that nothing exists in the Scriptures which is not divinely suggested and inspired." This belief was expanded by the advocates of "plenary" inspiration, who asserted that every word, syllable, and letter of the Bible was inspired by God. See *Higher Criticism*.

**INSURANCE.** The origin of insurance is unknown; it has, on the authority of Suetonius, been ascribed to the emperor Claudius, A.D. 43. Marine insurance was in use in the beginning of the 15th century, and arose from the custom of merchants insuring their vessels and goods against the perils of the sea. Growing out of this form of protection to property was the insurance of the life of the merchant, who usually accompanied the ship, and of the captain of the vessel, both being liable to capture by Moorish and Turkish pirates. The

persons to whom the premium was paid were termed *underwriters*, who agreed to pay a fixed amount, the sum assured, if the person insured died within a year; the document specifying the contract was called the *policy*, the name it still bears. The premium charged appears to have been not less than 5 per cent. of the sum assured, irrespective of the age of the insurer. In 1574, Robert Chandler, under a patent granted to him by queen Elizabeth, established a chamber of insurance in London to regulate all contracts of insurance. This chamber was destroyed by the great fire of 1666. The earliest *life policy* of which particulars have been preserved was issued 15 June, 1583, at the "Office of Insurance, within the Royal Exchange, London." This policy gave rise to the first authenticated disputed claim. It provided that if a certain William Gybbons should die within twelve months the underwriters, thirteen in number, who guaranteed sums from 25*l.* to 50*l.* each, should pay to Richard Martin 383*l.* 6*s.* 8*d.*, the premium for which was 8 per cent. Gybbons died 28 May, 1584, and the underwriters refused to pay on the ground that he had survived twelve months of 28 days each. The commissioners appointed to determine such cases decided that the twelve months mentioned in the policy meant a calendar year, and ordered payment to be made by the underwriters; on appeal to the court of admiralty, the decision of the commissioners was upheld, 1587. Life insurance as a provision for a wife and children is mentioned in 1622. Policies as collateral security for money advanced for the purchase of appointments were much in vogue in the 17th and 18th centuries. The earliest known life insurance office, named the "Society of Assurance for Widows and Orphans," was established in 1699, and was of the nature of an assessment company; up to this date life insurances were underwritten. In principle it was to consist of 2,000 members, who were to contribute 5*s.* each on entry, to pay for the first claim, and the same sum on each subsequent death among the members, 500*l.* being thus provided for the widow and children. The society came to an end in 1712. "The Amicable" was started in 1705, and received its charter from queen Anne, 25 July, 1706; the number of its members was to be 2,000, each paying 10*s.* entrance fee, and an annual subscription of 6*l.* 4*s.* Amongst the representatives of those who died in the first year one-sixth of the contributions were to be divided; one-third the second year, and proportionately until in the fifth and all subsequent years five-sixths of the contributions were to be divided, the remainder, with all profits made by the sale of annuities, being accumulated as a reserve fund. In 1807, the contribution was made to vary with the age of entry. The Amicable existed as an independent institution until 1866, when it was transferred to the Norwich Union Life Insurance Society, its policies being finally merged, 30 June, 1886, with those of the Norwich Union. Numerous life offices of the assessment type came into existence shortly after the foundation of the Amicable, all of which, except the Amicable, collapsed at the bursting of the South Sea Bubble, 1720. The London Assurance Corporation and the Royal Exchange Assurance Corporation, chartered in 1720, received additional powers authorising them to transact life business; these two institutions are now the oldest life offices extant. The Equitable, founded 1760, was the first life insurance office to transact its business on a scientific basis, by fixing the sum assured and the premium at the time of making the assurance, securing at death the payment of a definite sum, the rate of premium being

regulated by the age at entry. Owing to the Northampton tables of mortality, which over-estimated the death-rate percentage, having been used as the basis of calculation, a surplus accumulated. After paying claims and expenses and providing a reserve fund, this sum was distributed among the assured, and is the origin of the system of *bonuses*. The practice of insuring lives as a speculation was put down by the Gambling Act of 1774, which made it illegal to effect an insurance on the life of any person, unless the insurer had pecuniary interest in the life insured. In the 19th century the number of companies rapidly increased, reaching a total of 113 in 1870, insuring 329,000,000*l.*, under 638,000 policies, with funds against liabilities amounting to 92,000,000*l.*, with an annual premium income of 9,500,000*l.* The reckless amalgamation of companies prior to 1870 led to disastrous results in the case of the Albert and the European companies, the former of which absorbed 26, the latter 40 other offices; the Albert failing for 8,000,000*l.* The Life Assurance Companies Act, 1870, passed to protect the public against unsound companies, requires each office to publish a statement of its affairs in the form of an annual balance sheet, and a periodical valuation of its liabilities and assets; the sum of 20,000*l.* must also be deposited with the board of trade by every new company as a guarantee to its policy holders. A scheme for effecting life insurances through the medium of the post office was inaugurated in 1864, the amount insured being not less than 5*l.* nor more than 100*l.* for either sex between the ages of 14 and 65, and 5*l.* on children between 8 and 14 years. *Industrial* insurance is carried on to a large extent in life policies of small amount, the premiums varying from 3*d.* to 6*d.* per week; the Prudential, founded 1848, which has a very extensive business of this class, is the largest office of the kind, its funds exceeding 50,000,000*l.* An early attempt to *guarantee fidelity* of employes by insurance was made in 1720. The first fidelity office, The Guarantee Society, was established in 1840, the Provident Clerks Guarantee in 1865, the Law Guarantee and Trust in 1888. Among the developments of modern life insurance are endowment policies; policies at reduced and modified premiums; insurance without medical examination, instituted by the Sun Office in 1900, and since adopted by other companies; annuities; partnership policies; policies as trusts for married women in connection with the Married Women's Property Acts of 1870 and 1882, and the Married Women's Policies Insurance (Scotland) Act of 1880; insurances for special classes, as the Clergy Mutual, founded in 1829; the University, 1825; the Scottish Temperance, 1883; the United Kingdom Temperance, 1840; and the Abstainers and General, 1883, which grants special advantages to vegetarians. Insurance against *accident* has largely increased as a result of the Workmen's Compensation Acts, 1897 and 1900. The *coupon* system entitles persons travelling who possess copies of specified newspapers, diaries, railway guides, &c., containing accident coupons, to the payment of certain sums for injuries specified. *Special risks* are provided against by insurances effected with various offices, such as the National Burglary Insurance Company, 1892, which issues a combined burglary and fire policy, as well as special policies for licensed victuallers, eyclists, and the army; school epidemics can also be insured against in certain offices. The first *Mortality Table* was prepared by Halley, astronomer-royal of England, 1693; the first table of premiums used by the Equitable Society was prepared from the mortality of the year 1741 by John Dodson, author of the

"Mathematical Repository," who, with Robert Simpson, was the founder of that society, which later adopted the "Northampton" tables, constructed by Dr. Price from statistics of the parish of All Saints, Northampton, from 1735-80. Joshua Milne, actuary to the Sun Office, constructed the "Carlisle" table, based on the population of the parishes of St. Mary and St. Cuthbert, Carlisle, in 1780 and 1787. The Equitable assurance table was compiled by Griffith Davies, F.R.S., 1825. In 1843, a committee of actuaries collected the data of 17 insurance companies, and published the result of their investigations in 1843. The Institute of Actuaries, founded in 1848 (incorporated by royal charter in 1884), published in 1869 a table compiled on the basis of the experience of 21 insurance companies; tables deduced from these results by Dr. Sprague were published in 1882. A vast business in life insurance is transacted in the *United States*, the Mutual Insurance Company of New York being the largest in the world. A feature in American insurance is the *tontine* system (*which see*), which is in extensive operation. Insurance offices are under state control, and are required to maintain a standard of solvency, the company being compelled to close if its assets are not sufficient to meet its liabilities according to the legal estimate. *Fire Insurance* appears to have had its origin in Anglo-Saxon times in connection with the guilds, the extant rules of some of these specifying that in consideration of certain contributions, the members guaranteed each other against loss by fire, water, robbery, and other contingencies. The oldest fire insurance in existence is the Sun, founded in 1710. See also *Lloyd's* and *Tontine*.

**INTENDMENT OF CRIMES**. In cases of treason, wounding, burglary, &c., intention proved was made as punishable as crime completed, by 7 Geo. II. 1734. The rigour was modified by Sir Robert Peel's revision of the statutes, 4-10 Geo. IV. 1823-29.

**INTERDICT** or **ECCLESIASTICAL CENSURE**, seldom decreed in Europe till the time of Gregory VII. 1073, but often afterwards. When a prince was excommunicated, all his subjects retaining their allegiance were excommunicated also, and the clergy were forbidden to perform any part of divine service, or any clerical duties, save the baptism of infants, and taking the confessions of dying penitents. In 1170, pope Alexander put all England under an interdict; and when king John was excommunicated in 1208, the kingdom lay under a papal interdict for six years. England was put under an interdict, on Henry VIII. shaking off the pope's supremacy, 1535; and pope Sixtus V. published a crusade against queen Elizabeth of England in 1588; see *Excommunication*.

**INTEREST**, see *Usury*. The word interest was first used in an act of parliament of the 21st James I. 1623, wherein it was made to signify a lawful increase by way of compensation for the use of money lent. The rate fixed by the act was 8*l.* for the use of 100*l.* for a year, in place of usury at 10*l.* before taken. The Commonwealth lowered the rate to 6*l.* in 1651; confirmed in 1660; and by an act of the 13th of queen Anne, 1713, it was reduced to 5*l.* The restraint being found prejudicial to commerce was somewhat relaxed in 1839, and was totally removed by 17 & 18 Vict. c. 90 (1854).

**INTERIM OF AUGSBURG**, a decree issued by the emperor Charles V. in 1548, with the view of attempting to reconcile the Catholics and Protestants, in which it entirely failed. It was revoked in 1552. The term *Interim* has been applied to other decrees and treaties.

Ray Lankester, and others); M. Darboux president (M. Berthelot, M. Gaston Bossier, Sir Michael Foster, M. de Goeje, and Dr. Mommsen, hon. presidents). The association includes 2 divisions, letters and science, which meet separately, the general assembly afterwards sitting in congress to discuss and act on their decisions; triennial meeting held in London, 1904.

"O'Flaherty, Keating, Toland, Kennedy, and other modern Irish historians, have rendered all uncertain, by deducting their history from the Deluge with as much assurance as they deliver the transactions of Ireland from St. Patrick's time."—Anderson.

**IRON**. The Greeks ascribed the discovery of iron to themselves, and referred glass to the Phœnicians. Moses relates that iron was wrought by Tubal-Cain (Gen. iv. 22). Swedish iron is very celebrated, and Dannemora is the greatest mine of Sweden.—The weekly publication "*Iron*," which began 18 Jan. 1873, was a continuation of the "*Mechanics' Magazine*" (started 1823), and was combined with "*Industries*," in 1893. One of the finest, thickest, and heaviest armour-plates ever rolled in the world was pressed into the very perfection of a manufactured armour-plate at the great Atlas Ironworks of sir John Brown and Co., Sheffield. The size of it when in the furnace was a little over 20 feet long by about 4 feet broad and 21 inches thick. Its rough weight was over 21 tons. It was built up in the furnace before being rolled by five mould plates, each 3 inches thick, and one solid plate of 6 inches. This mass when reduced by intense heat to the consistency of dough, was withdrawn from the furnace, and in the course of less than a quarter of an hour was passed between the enormous rollers many times, was reduced to a compact slab of iron of a uniform thickness of 15 inches, and then passed on to its bed to cool

till fit for having its rough edges planed down to the proper dimensions, 6 Sept. 1867. Armour-plate 24 inches thick rolled at same works, Oct. 1876.

Iron works (cost about 1,000,000*l.* made by Whitworth & Co. at Manchester) put up at Spitham early in 1872. Mr. Crampton's iron furnace, in which definite proportions of coal dust and air are introduced under pressure, was tried at Woolwich and was reported successful, May, 1873.

IRON CROSS, an order of knighthood established by Frederick William III. of Prussia,

10 March, 1813, to honour patriotic bravery in the war against France; was revived by William I. in the Franco-Prussian war, and awarded by him to his son for his victory at Wissembourg, 4 Aug. 1870. About 40,000 persons were decorated in 1870-71.

IRON CROWN (of Italy), of gold and precious stones, set in a thin ring of iron, said to have been forged from a nail of Christ's cross, was made by order of Theodelinde for her husband, Agilulf, king of the Longobards, 591. She presented it (to be kept) to the church at Monza. Charlemagne was crowned with this crown, and after him all the emperors who were kings of Lombardy, Napoleon I. at Milan, on 26 May, 1805, put it on his head, saying, "*Dieu me l'a donnée; gardez-la, y touchera.*" (God has given it to me; we to him who touches it.) The crown was removed from Monza to Mantua by the Austrians, on 23 April, 1859. After the peace of Vienna in 1866, the crown was given up to general Menabrea on 11 Oct., and presented to king Victor Emmanuel, at Turin, on 4 Nov. The order of the "Iron Crown of Italy," instituted by Napoleon 26 May, 1805, was abolished in 1814, but revived by the emperor of Austria 12 Feb. 1816; see *Gotha*. The order of the Crown of Italy was instituted by king Victor Emmanuel 20 Feb. 1868.

IRON-MASK, THE MAN WITH THE.\* A mysterious prisoner in France, wearing a mask and closely confined under M. de St. Mars, at Pignerol (1679), Exilles (1681), Sainte Marguerite (1687), and at the Bastille (1698), where he died 19 Nov. 1703. He was of noble mien, and was treated with profound respect; but his keepers had orders to despatch him if he uncovered. M. de St. Mars himself always placed the dishes on his table, and stood in his presence.

IRREDENTISTS, see *Italia Irredenta*.

IRRIGATION, practised in the east and in Egypt from the most remote ages. It was strenuously advocated for India by sir A. Cotton and others at the Social Science Congress at Manchester, Oct. 1866. In 1865 acts were passed for utilising London sewage in the irrigation of grass land, and the results are said to be generally favourable. The subject was much discussed, Aug. 1873. A method of producing artificial rain from ponds by means of steam-power, patented by Isaac Brown, of Edinburgh, was tried by Mr. Coleman, at Stoke Park, and reported successful; see *Sewage*, and *Intermittent Filtration, Madras* (1895), *Egypt, Nile*.

\* The following conjectures have been made as to his identity:—An Armenian patriarch forcibly carried from Constantinople (who died ten years before the mask); the duc de Vermandois, son of Louis XIV., reported to have perished in the camp before Dixmude; the duc de Beaufort, whose head is reported to have been taken off before Candia; James, duke of Monmouth, executed at Tower-hill; a son of Anne of Austria, queen of Louis XIII., either by cardinal Mazarin, or by the duke of Buckingham; the twin brother of Louis XIV. (a conjecture received by Voltaire and others); Fouquet, an eminent statesman in the time of Louis XIV.; and a count Matthioli, secretary of state to Charles III., duke of Mantua. M. Delort and the right hon. Agar Ellis (afterwards lord Dover) endeavoured to prove Matthioli to have been the person. The mask, it seems, was not made of iron; but of black velvet, strengthened with whalebone, and fastened behind the head with a padlock.

**IRUN** (a frontier village of Spain). 'On 16 May, 1837, the British auxiliary legion under general Evans, marched from St. Sebastian to attack Irun (held by the Carlists), which after a desperate resistance was carried by assault, 17 May.

They use a liturgy (framed in 1842, and enlarged 1853), and have church officers named apostles, angels, prophets, &c. In 1852 lighted candles were placed on the magnificent altar, and burning of incense during prayers was prescribed. The Gothic church in Gordon-square was solemnly opened 1 Jan. 1854. It is said that all who join the church offer it a tenth of their income. They had 30 chapels in England in 1851.

In 1847, however, Argyll and the Isles were made a seventh post-revolution and distinct bishopric; see *Bishops*.

\* Edward Irving was born 15 Aug. 1792, and was engaged as assistant to Dr. Chalmers, at Glasgow, in 1819. In 1823 he attracted immense crowds of distinguished persons to his sermons at the Scotch church, Hatton-garden. A new church was built for him in Regent-square in 1827. Soon after, he propounded new doctrines on the human nature of Christ: and the "Utterances of Unknown Tongues," which began in his congregation with a Miss Hall and Mr. Taplin, 16 Oct. 1831, were countenanced by him, as of divine inspiration. He was expelled from the Scotch church, 15 March, 1833. His church, "reconstituted with the threefold cord of a sevenfold ministry," was removed to Newman-street. He died 2 Dec. 1834.

It was again captured by the Russians 26 Sept. 1809, and retained till the treaty of Paris in 1856, when it was ceded to Moldavia.

**ISMAILIA**, the half-way station on the Suez Canal. It is supposed to occupy nearly the site of Rameses. Sir Samuel Baker named it Ismailia instead of Gondokoro, May, 1869. The rebel Egyptian army was defeated near here by the British, 25 Aug. 1882. See *Egypt*.

The following terms are often used with reference to certain periods in the history of Italian literature and art.

1. *Trecento* (three hundred), from the birth of Dante (1265) to the death of Boccaccio (1375), which two, with Petrarca, are styled "the triumvirate of the Trecento."
2. *Quattrocento* (four hundred), from 1375 to the revival of Italian literature by Lorenzo de' Medici in the 15th century. During this period Latin was revived, to the prejudice of Italian.
3. *Cinquecento* (five hundred), from about 1480 to 1590. A sensuous style of art, founded on the heathen mythology, began to prevail.
4. *Seicento* (six hundred), from 1590 to 1700. The bad taste which prevailed during this period is ascribed to the influence of the Spaniards and the Jesuits throughout Italy. *Seicentisti* is a term of reproach.

The *Trecento* and *Cinquecento* were the most flourishing periods.

**ITALIAN REPUBLIC** was the name given to the remodelled Cisalpine republic. Napoleon Bonaparte, president, Jan. 1802.

**ITALY**, a name mythically derived either from Italus, an early king, or *italus*, a bull calf. The invading Pelasgians from Greece, and the Aborigines (Umbrians, Oscans, and Etruscans), combined, form the Latin race, still possessing the southern part of Europe. The history of Italy is soon absorbed into that of Rome, founded 753 B.C. In the middle ages it was desolated by intestine wars and the interference of the German emperors; since then, Spain, France, and Germany struggled for the possession of the country, which has been divided among them several times. Spain, which predominated in Italy during the 16th and 17th centuries, yielded to the house of Austria at the beginning of the 18th. The victories of Bonaparte in 1797-8 changed the government of Italy; but the Austrian rule was re-established at the peace in 1814. In 1848 the Milanese and Venetians revolted and joined Piedmont, but were subdued by Radetzky; see *below*. The hostile feeling between Austria and Piedmont gradually increased till war broke out in April, 1859. The Austrians were defeated, and the kingdom of Italy, comprising Piedmont, Sardinia, Lombardy, Tuscany, Modena, Parma, the Romagna, Naples, and Sicily was re-established, 17 March, 1861, by the Italian parliament (consisting of 443 deputies from 59 provinces). On 29 Oct. 1861, the internal government was reorganized; the 59 provinces were placed under prefects, subject to four directors-general. War with Austria was declared 18 June, 1866; and on 3 Oct. peace was signed at Vienna, and Venetia was ceded to Italy; see *below* for the events. The settlement of the kingdom of Italy was consummated by the occupation of Rome as the capital, 1870. Estimated population of the kingdom, 1862, 25,003,635 (Rome was added in 1870); 1878, 28,209,620; Jan. 1882, 28,452,639; 1902, 32,966,307. **ITINERARIES**. The Roman Itinerarium was a table of the stages between important places. The "Itineraria Antonini," embracing the whole Roman empire, usually ascribed to the emperor Aurelius Antonius, and his successors, A.D. 138-180, was probably based upon the survey made by order of Julius Cæsar, 44 B.C. The "Itinerarium Hierosolymitanum" was drawn up for the use of the pilgrims about A.D. 333.

**IVORY** was brought to Solomon from Tarshish, about 992 B.C. (1 *Kings* x. 22). The colossal statues of Jupiter, Minerva, &c., by Phidias, were formed

## J.

J was distinguished from I by the Dutch scholars of the 16th century, and introduced into the alphabet by Giles Beys, printer, of Paris, 1550. *Dufresnoy*.

**JACOBINS**, a name given to the Dominicans in France, because their first convent was the hospital of the pilgrims of St. James (Jacobus), at Paris, at the request of pope Honorius III. (1216-27). The Jacobin club (first called "club Breton") consisted of about forty gentlemen and men of letters, who met in the hall of the Jacobin friars, at Paris, in Oct. 1789, to discuss political and other questions. Similar societies were instituted in all the principal towns of the kingdom. The club was closed 11 Nov. 1794.

**JACOBITES**, a Christian sect, so called from Jacob Baradaeus, a Syrian, about 541; see *Euty-chians*.—The partisans of James II. (Latin, Jacobus II.) were so named after his expulsion from England in 1688-9.

A sentimental revival of Jacobitism appeared in England in 1801, the "White Rose League" having been formed. The marquis de Rivigny and other members of the "Legitimist Jacobite League" were stopped in their attempt to place a large floral wreath on the tomb of Mary, queen of Scots, in Westminster Abbey, 8 Feb. 1802.

**JACQUERIE**, a term applied to bands of revolted peasants (headed by one Caillot, called Jacques Bonhomme), who ravaged France during the captivity of king John in 1358, and were quelled with much bloodshed. Similar insurrections occurred in Germany. One was termed the *Bundschuh*, from the large shoe especially worn by peasants, in 1502; and another termed the Bund (or league) of the Poor Conrad, 1514 and 1524, which also cost about 100,000 lives, and led to the insurrection of the anabaptists.

**JAFFA**, a seaport of Syria, celebrated in scripture as Joppa, whence Jonah embarked (about 862 B.C.), and where Peter raised Tabitha from the dead (A.D. 38); in mythology the place whence Perseus delivered Andromeda. Jaffa was taken by the caliph Omar, in 636; by the Crusaders, 1099; by Saladin, 1193; by Louis IX., 1252; and by Bonaparte, 7 March, 1799; the French were driven out by the British in June the same year. Here, according to sir Robert Wilson, were massacred 3800 prisoners by Bonaparte; but this is doubted. Jaffa suffered by an earthquake in Jan. 1837, when it is said that 13,000 persons were killed.

**JAGELLONS**, a dynasty which at times reigned over Lithuania, Poland, Hungary, and Bohemia, beginning with Jagellon, duke of Lithuania (husband of Hedwig, daughter of Louis of Hungary, 1384), who became king of Poland as Ladislas III. or V. in 1399, and ending with Sigismund II., who died in 1572.

In later days they degenerated from their strict discipline, and several times deposed and killed the sultans. Through the Jesuits Jansenism was condemned by Innocent X. in 1653, and by Clement XI., in 1713, by the bull *Unigenitus*. This bull the French church rejected. Jansenism still exists at Utrecht and Haarlem; see *Port Royalists*. Loos, abp. of Utrecht, died, June, 1873.

**JAVA**, a large island in the Eastern Archipelago, is said to have been reached by the Portuguese in 1511, and by the Dutch in 1595. The latter, who now possess it, built Batavia, the capital, about 1619; see *Batavia*. The atrocious massacre of 20,000 of the unarmed natives by the Dutch, sparing neither women nor children, to possess their effects, took place in 1740. The island capitulated to the British, 18 Sept. 1811. The sultan was dethroned by the English, and the hereditary prince raised to the throne, in June, 1813. Java was restored to Holland by treaty in 1814, and given up in 1816. The English promoted free labour instead of forced; but the Dutch reverted to the old system, and in 1830 abolished free labour, introducing the "culture system," by

which the government controls the cultivation of the land and buys the produce at its own price. In Aug. 1860, the Swiss soldiers here, aided by the natives, mutinied, but were soon reduced, and many suffered death. The diminished prosperity of Java led to warm discussions in the Dutch chamber in 1866.

The valuable "History of Java," by sir T. Stamford Raffles (successful governor 1811-16; his life by Mr. Demetrius Boulger, published 1898), was published 1817.

Java has a great many volcanoes, and has frequently been devastated by eruptions and earthquakes; those of 5 Jan. 1699, 31 Oct. 1876, and 10 June, 1877, were very destructive.

Java and neighbouring isles desolated by a series of violent eruptions from about two-thirds of its 46 volcanoes, beginning with Krakatoa, casting up immense quantities of lava, mud, ashes, and fragments of rocks, darkening the air for about 50 square miles. Mountains were split up, some disappeared, and many new craters were formed. Rumbling noises heard 25 Aug., violent eruptions of Krakatoa 26 Aug. There was much submarine disturbance, and an immense "tidal wave" destroyed Anjer and other places, 27 Aug. The lighthouses in the straits of Sunda were swallowed up, and new volcanic peaks appeared, rendering navigation highly dangerous. Loss of life estimated at 35,000, 25-28 Aug. Great atmospheric, oceanic, and electrical disturbances for thousands of square miles. See under *Sun*, 1883.

A committee of the Royal Society issued a report on the eruption, Oct. 1888.

Serious volcanic outbreaks; great destruction; about 500 persons perish, early May, 1885.

Insurrection of the natives at Anjer; some Europeans and natives killed; the revolt checked by the police and settled, 16 July, 1888.

By a great eruption of the volcano of Galoenggoen in 1822 114 villages were destroyed, and over 4,000 lives lost; several villages destroyed by another eruption, reported, 20 Oct. 1894.

Eruption of Kelcet, 181 deaths, about 23 May, 1901.

On the delay of justice, commodore Pullen, with the *Cyclops*, bombarded the town, 25, 26 July. On 6 Aug. eleven of the assassins were executed; the ringleaders afterwards.

The number killed on each side was reckoned at 5000.

**JENA** and **AUERSTADT** (Central Germany), where two battles were fought, 14 Oct. 1806, between the French and Prussians. The French were commanded at Jena by Napoleon, and at Auerstadt by Davoust: the Prussians by prince Hohenlohe at the former place, and the king of Prussia at the latter. The Prussians were defeated, losing nearly 20,000 killed and wounded, and nearly as many prisoners, and 200 field pieces; the French lost 14,000 men. Napoleon advanced to Berlin, and issued the Berlin decree (*which see*).

**JENKINS' EAR**. In 1731, an English merchant-vessel was boarded by a Spanish guardship, and the captain, Robert Jenkins, cruelly used, his wounded ear being torn off. He obtained no redress by appeal to his government. He appeared before parliament in 1738, when the convention of the Pardo was severely discussed, and war ensued. Jenkins' story was verified by Admiralty Records in 1889.

**JERSEY**. The chief island of the Channel archipelago (which includes Guernsey, Sark, Alderney, &c.), formerly held by the Romans in the 3rd and 4th centuries after Christ—Jersey being termed Cæsarea. The isles were captured by Rollo, and thus became an appanage of the duchy of Normandy, and were united to the crown of England by his descendant, William the Conqueror. The inhabitants of the Channel Islands preferred to remain subjects of king John, at the period of the conquest of Normandy by Philip Augustus, and while retaining the laws, customs, and (until lately) the language of their continental ancestors, have always remained firm in their allegiance to England. Almost every war with France has been characterised by an attack on Jersey, the most formidable of which, under the baron de Rullecour, was defeated by the English garrison and Jersey militia, commanded by major Pierson, 6 Jan. 1781. Mr. J. Bertrand Payne, in his "Armorial of Jersey," and his "Gossiping Guide," has exhaustively treated the general and family history of the island. Jersey became a place of refuge for MM. Rouher, Baroche, Drouyn de Lhuys, and other distinguished French imperialists, Sept. 1870. Some of the Trappists

It is the *entrepôt* of an extensive trade, and the terminus of numerous railways. The Jerusalem, Cowper's Court, Cornhill, originally a coffee-house, opened early in the 17th century; burnt in the great fire 1666, and again in 1746, rebuilt in 1820. It is supported by a company and subscribers, and forms a rendezvous for ship-owners, brokers, and others closely connected with shipping and commerce with the East, Australasia and the Cape.

"JERUSALEM DELIVERED," the great Italian epic, by Tasso, was published in 1580.

**JERVIS'S ACTS**, 11 & 12 Vict., cc. 42, 43 (1848), relate to legal proceedings against criminals.

**JESTER** is described as "a witty and jocose person, kept by princes to inform them of their faults, and of those of others, under the disguise of a waggish story." The office of jester existed in the 8th cent. in the East, and probably earlier in India. The famous caliph, Haroun-al-Raschid, had a jester, Bahalul, some of whose sayings have been preserved. Several of our kings, particularly the Tudors, kept jesters, among these Will Somers, the

"fool" of Henry VIII. Rahere, the founder of St. Bartholomew's priory, West Smithfield, London, 1133, is said to have been a court jester and minstrel. There was a jester, Archie Armstrong, at court in the reigns of James I. and Charles I. who was deprived of his office for his jests on abp. Laud, but we hear of no licensed jester afterwards. The last private person to keep a jester is said to be lord Suffolk, whose "fool," Dicky Pierce, was buried at Berkeley, 1728.

**JESUIT PORCELAIN**, a Japanese porcelain of the 16th cent., now rare, which the jesuits in Japan caused to be decorated with Madonnas, images of saints, and various emblems of the Christian faith.

**JESUITS**. The society or company of Jesus was founded by Ignatius Loyola, a page to Ferdinand V. of Spain, subsequently an officer in his army, and afterwards canonised. Having been wounded in both legs at the siege of Pampeluna, in 1521, he devoted himself to theology, and renounced the military for the ecclesiastical profession. He dedicated his life to the Blessed Virgin as her knight; made a pilgrimage to the Holy Land, and on his return laid the foundation of his society at Paris, 16 Aug. 1534. He presented his institutes, in 1539, to pope Paul III., who made many objections; but Ignatius adding to the vows of chastity, poverty, and obedience, a fourth of implicit submission to the holy see, the institution was confirmed by a bull, 27 Sept. 1540. The number of members was not to exceed sixty, but that restriction was taken off by another bull, 14 March, 1543; and popes Julius III., Pius V., and Gregory XIII. granted many privileges. Loyola died 31 July, 1556. Francis Xavier, and other missionaries, the first brethren, carried the order to the extremities of the habitable globe, but it met with great opposition in Europe, particularly in Paris; see *Paraguay* and *Jansenists*. The order still exists in many European states contrary to the laws.

**JESUIT'S BARK**, called by the Spaniards fever-wood, from the cinchona or chinchona tree, discovered, it is said, by a Jesuit, about 1535 (and used by the order). Its virtues were not generally known till 1633, or 1638, when the wife of the viceroy at Peru, the countess of Chincón, was cured of a fever by this drug, hence termed *pulvis comitisæ*. She brought it to Europe in 1639. It was sold at one period for its weight in silver, and was introduced into France in 1649; and is said to have cured Louis XIV. of fever when he was dauphin. It came into general use in 1680, and sir Hans Sloane introduced it here about 1700. The cinchona plant thrives in India, Jamaica, New Zealand, and other places. See *Quinine*.

**JESUS CHRIST**, the SAVIOUR OF THE WORLD. 1 Tim. iii. 16. The following dates given in the English bible have been much controverted, and others have been proposed by various chronologers, as Hales and Clinton, and others (see *Nativity and Crucifixion*). The birth of Christ is dated, 4 B.C.; his baptism and first ministry, 26 A.D.; his crucifixion, resurrection, and ascension, 29 A.D.

**JEUNESSE DORÉE**, "gilded youth," a party name applied during the French revolution to certain young Parisians who sought to bring about the reaction or counter-revolution after the fall of Robespierre, 27 July, 1794. Called also *petits-maitres*, "elegants," and *muscadines*, "scented darlings." The term *jeunesse dorée* now designates fashionable young men who dress in elegant style, and spend their lives in luxury and pleasure.

**JEWELLERY** was received by Rebekah as a marriage gift, 1857 B.C. (*Gen.* xxiv. 53). Pliny the elder says he saw Lollia Paulina (wife of Caius Cæsar, and afterwards Caligula) wearing ornaments valued at a sum equal to 322,916*l.* sterling. Jewels were worn in France by Agnes Sorel in 1434, and encouraged in England about 1685. The standard of gold for jewellery, except wedding rings, was lowered by parliament in 1854. See *Gems*.

**JEWISH ERA AND CALENDAR**. The Jews usually employed the era of the Seleucide until the 15th century, when a new mode of computing was adopted. They date from the creation, which they consider to have been 3760 years and 3 months before the commencement of our era. To reduce Jewish time to ours, subtract 3761 years. The Jewish year consists of either twelve or thirteen months, of 29 or 30 days. The civil year commences with the month Tisri, immediately after the new moon following the autumnal equinox; the ecclesiastical year begins with Nisan.

**JEYNES** or **JAINS**, a sect of Buddhists, in India, dating from the 9th century. They do not recognise a creator, but believe matter to be eternal, and refrain from destroying life, considering animals to be sacred.

Their discipline is very strict; a trial for defamation of character by a libel, accusing certain members of breaking the laws of caste, lasted 34 days at Moorsheadabad, and cost above 100,000 rupees. The verdict was for the defendants, March, 1891

**JEYPOOR**, one of the four principal Rajpoot states of India, tributary to the British. The new capital, Jeypoor, termed the Paris of India, was built in the last century. **JEZREELITES**, New and Latter House of Israel, was founded by James Jezreel Jezreel (James White), who claimed that he was a messenger sent from God, whose revelations revealed to him are recorded in "The Flying Roll." White died in 1885. The Jezreelites asserted that the Gospel is sufficient for the salvation of the soul, but for the salvation of the body the Law must be added, and that when Christ comes to reign for His millennium, He will be greeted by the 144,000 (Rev. vii., 5-8), who will be endowed with immortal bodies, to which chosen band the Jezreelites claimed to belong. Jezreel's widow, "Queen Esther," died in 1888; since then the sect has become almost extinct. Their headquarters were at Gillingham, near Chatham.

"By jingo" occurs in Jarvis's "Don Quixote," and the "Vicar of Wakefield."

Charles VII. entrusted her with the command of some French troops, and she raised the siege, and entered Orleans with supplies, 29 April, 1429; and the English, who were before the place from 12 Oct. preceding, abandoned the enterprise 8 May following. She captured several towns in the possession of the English, whom she defeated in a battle near Patay, 18 June, 1429. She was wounded several times herself, but never shed any blood with her own hand. She was taken at the siege of Compiègne, 25 May, 1430; and, after a trial, burnt for a witch at Rouen, 30 May, 1431. A statue of Joan of Arc, the work of the late princess Marie of France, was inaugurated at Orleans, 13 Sept. 1851, and the 435th anniversary of the deliverance of the city was celebrated there on 14 May, 1865. I., sheriffs and bailiffs were, before they made deliverance of the distress, to receive pledges for pursuing the suit, and for the return of the property, if return were awarded

But this becoming a matter of form, the fictitious names of Doe and Roe were used until the form was declared to be no longer necessary by the Common Law Procedure Act, 1852.

**JOHN O'GROAT'S HOUSE**, an ancient house formerly situated on Duncan's Bay Head, the most northerly point of Great Britain, deriving its name from John of Groat, or Groot, and his brothers, originally from Holland, said to have settled here about 1489.

The house was of an octagon shape, being one room, with eight windows and eight doors, to admit eight members of the family, the heads of different branches of it, to prevent their quarrels for precedence at table. Each came in by this contrivance at his own door, and sat at an octagon table, at which, of course, there was no chief place or head.

JUDICIAL SEPARATION of married persons may now be decreed by the Divorce court, established by act of parliament in 1857. The persons separated may not marry again.

JUDICIAL STATISTICS FOR ENGLAND AND WALES began with the year (1856) in 1857. See under *Crime*. The new series beginning with the year 1893, included many changes, and criminal statistics of some foreign countries.

JUGGERNAUT, correctly *Jagannāth*, or "Lord of the World," one of the incarnations of Krishna, is an idol formed of an irregular pyramidal black stone, with two rich diamonds to represent eyes; the nose and mouth are painted vermilion. The number of pilgrims that visit the god is stated at 1,200,000 annually. Formerly some were crushed by the wheels of the car (so lately as Aug. 1864); a great many never returned, and, to the distance of fifty miles, the way was strewn with human bones. The temple of Juggernaut has existed about 800 years. The state allowance to the temple was suspended by the Indian government in June, 1851. The festival was kept, June, 1872. Twelve persons were said to be killed by accident, Aug. 1873. The festival of 1878 reported a failure.

JUGURTHINE WAR. Jugurtha murdered his cousin, Hiempsal, king of Numidia, and usurped his throne, 118 B.C. He gave Adherbal a share in the government, but killed him in 112. He then provoked the Romans to war. Cæcilius Metellus was first sent against him, and defeated him in two battles; and Marius brought him in chains to Rome to adorn his triumph, 106 B.C., where he was put to death in 104. This war has been celebrated by the pen of Sallust.

JULIAN ERA AND YEAR, see *Calendar*. *Julian period* (by Joseph Scaliger, about 1583), a term of years produced by the multiplication of the lunar cycle 19, solar cycle 28, and Roman indiction 15. It consists of 7980 years, and began

4713 years before our era. It has been employed in computing time to avoid the ambiguity attendant on reckoning any period antecedent to our era, an advantage in common with the mundane eras used at different times. By subtracting 4713 from the Julian period, our era is found; if before Christ, subtract the Julian period from 4714.

**JULIERS**, a Prussian province; made a duchy in 1356; became the subject of contention on the extinction of the ruling family in 1609; was allotted to Neuburg in 1659; seized by the French in 1794; and ceded to Prussia in 1815.

**JULY**, the seventh, originally fifth, Roman month, named by Marc Antony from *Julius* Caesar, the dictator of Rome, who was born in it.

The early part of July, 1838, was very cold; many thunderstorms, followed by destructive floods in the latter part. See *Inundations*.  
*July Revolution*. See *France*, 1830.

**JUNE**, originally the fourth, now the sixth month, owes its name to *Junius*, which some derive from *Junio*, and others from *Juniores*, this being the month for the young, as May was for aged persons. Ovid, in his *Fasts*, introduces Juno as claiming this month. "Glorious 1st of June;" see *Ushant*.

**JUNG RIVER**, West Africa. Natives chastised for outrage on Mr. Laborde, envoy, and others, by gen. Havelock, governor of Sierra Leone, May, 1882.

**JUNIUS'S LETTERS** began in the *Public Advertiser*, 21 Jan. 1769.

They have been ascribed to Mr. Wm. Burke, Mr. William Gerard Hamilton, commonly called Single-speech Hamilton, John Wilkes, Mr. Dunning (afterwards lord Ashburton), serjeant Adair, the rev. J. Rosenhagen, John Roberts, Charles Lloyd, Samuel Dyer, general Lee, the duke of Portland, Hugh Boyd, lord George Sackville, earl Temple, and sir Philip Francis. The last-named is generally considered to have been the author. Junius said, "I am the depository of my own secret, and it shall perish with me." The work of Mr. Chabot and hon. E. T. B. Twissleton was considered decisive of sir Philip Francis being Junius, May, 1871. "Junius is as much unknown as ever."—*Athenaeum*, 8 Sept. 1868.

Sale of manuscript papers of sir Philip Francis, reported to be inconclusive respecting "Junius," June, 1892; the sir Philip Francis correspondence sold for 436*l.* 2*s.* . . . 27 Nov. 1897

Mr. Charles Knight in his description of the letters in his "Popular History of England," 1860, asserts that they abound in gross exaggeration and venomous abuse. Mr. H. R. Francis, in his "Junius Revealed," published March, 1864, maintains that his grandfather (Sir Philip) was Junius. *The Athenaeum* (17, 24 March, 1894, and Mr. Fraser Rae, in 6 papers, 19 Feb. 1898) consider the book unsatisfactory. Mr. Fraser Rae's paper, "New Light on Junius," and facsimiles of handwriting, appeared, *Athenaeum*, 8, 15 April, 6 May, 1899.

**JUNKER PARTY** (*Junker*, German for *young noble*), a term applied to the aristocratic party in Prussia, which came into power under Otto von Bismarck-Schönhausen, appointed prime minister, 9 Oct. 1862. Their political organ is the *Kreuz-Zeitung*.

**JUNO**, the planet discovered by M. Harding, of Lilienthal near Bremen, 1 Sept. 1804. Its distance from the sun is 254 millions of miles, and it accomplishes its revolution in four years and 128 days, at the rate of nearly 42,000 miles an hour.

**JUNONIA**, festivals in honour of Juno (the Greek *Hera*, or *Hère*) at Rome, and instituted 431 B.C.

**JUNTA**. The Spanish provincial juntas or councils declared against the French in 1808, and incited the people to insurrection.

**JUNTO**, a name given to the leaders of the whig party in the reigns of William III. and Anne (1689-1714); the chiefs were admiral Edward Russell, John Summers, Charles Montague, and Thomas Warton.

**JUPITER**, known as a planet to the Chaldeans. The discovery of the satellites, incorrectly attributed to Simon Mayr (Marius) in 1609, was made by Galileo on 8 Jan. 1610; see *Planets*. JUPITER'S moons were all invisible on 21 Aug. 1867; a very rare occurrence. A fifth very small satellite was discovered by Mr. Barnard at the Lick observatory, 9 Sept. 1892. Dark spots observed, 1901-2. Sixth satellite discovered at Lick observatory by means of the Crossley reflector, 6 Jan. 1905, another the 7th, at the same observatory by Mr. Perrino, assistant-astronomer, 28 Feb. 1905. —JUPITER AMMON'S temple in Libya was visited by Alexander, 332 B.C. Cambyse's army sent against it perished miserably, 525 B.C. The Greek Zeus was the Roman Jupiter, contracted from *Diouis pater*, the father of Heaven.

**JURIDICAL SOCIETY** was established in Feb. 1855, and opened with an address by sir R. Bethell on 12 May following.

**JURIES**. Trial by jury was introduced into England during the Saxon heptarchy, mention being made of six Welsh and six Anglo-Saxon freemen appointed to try causes between the English and Welsh men of property, and made responsible, with their whole estates real and personal, for false verdicts. *Lambard*. By most authorities their institution is ascribed to Alfred about 886, which is not historical. In *Magna Charta*, juries are insisted on as the great bulwark of the people's liberty. When either party is an alien born, the jury shall be one half denizens, and the other half aliens, stat. 28 Edw. III. 1353. By the common law a prisoner upon indictment or appeal might challenge peremptorily thirty-five, being under three juries; but a lord of parliament, and a peer of the realm, who is to be tried by his peers, cannot challenge any of his peers. An act for the trial by jury in civil cases in Scotland was passed in 1815. An act to consolidate and amend the laws relating to juries in Ireland was passed 4 Will. IV. 1833. A new act respecting juries, regulating their payment, &c., was passed 9 Aug. 1870. The clause respecting their payment was rescinded by act passed 28 Feb. 1871. Laws respecting juries in Ireland amended, 14 Aug. 1871. New Juries bill brought in by the attorney-general, sir John Coleridge, Feb. 1873. Special juries bill passed, May, 1898. Juries are summoned to assist the coroner in investigating the causes of sudden or violent death.—**GRAND JURIES** (of not less than 12 or more than 23 persons), decide whether sufficient evidence is adduced to put the accused on trial.—The constitution of 1791 established the trial by jury in France.—An imperial decree abolished trial by jury throughout the Austrian empire, 15 Jan. 1852.—Trial by jury began in Russia, 8 Aug. 1866; in Spain, 1880.—A true bill for libel granted against alderman sir F. Truscott in his absence, who was honourably acquitted, 18 Sept. 1879.

**COERCION OF JURIES**.—It is said that in early times the suitors used to feed the jury empanelled in

their action, and hence arose the common law of denying sustenance to a jury after the hearing of the evidence. A jury may be detained during the pleasure of the judge if they cannot agree upon a verdict; and may be confined without meat, drink, or fire, candle light excepted, till they are unanimous.—Some jurors have been fined for having fruit in their pockets, when they were withdrawn to consider of their verdict, though they did not eat it. *Leon Dyer*, 137. A jury at Sudbury not being able to agree, and having been some time under duress, forcibly broke from the court where they were locked up, and went home, 9 Oct. 1791. *Phillips*. In Scotland, Guernsey, Jersey, and France, juries decide by a majority; in France, since 1831, a majority of two-thirds is required.

"JUSTE MILIEU" (moderation and conciliation to parties), according to Louis-Philippe (in 1830), is the only principle of government which can secure the welfare of France.

**JUSTICE GENERAL, LORD, Scotland, see Court of Session.**

**JUSTICES OF THE PEACE** are unpaid local magistrates, invested with extensive powers in minor cases, but subject to supersession and punishment by the King's Bench for an abuse of their authority. They were first nominated by William I. in 1076. *Stowe*. Persons termed conservators of the peace in each county were appointed by 1 Edw. III. c. 2, 1327; and their duties were defined in 1360. The form of a commission of the peace settled by the judges, 23 Eliz. 1580. *Hawkins*; see *Eyre*.

**JUSTICES, LORDS**, were appointed by English sovereigns to govern during their absence; especially by William III., George I. and George II. (1695-1760). George III. never left England. In Sept. 1821, when George IV. went to Hanover, lords justices were appointed, the duke of York being the first. No such appointment was made during the reign of queen Victoria, it having been decided by the law authorities in 1843 to be unnecessary when the queen went to France. Ireland is always ruled by lords justices when the lord-lieutenant is out of the country, or his office is vacant.—Two lords justices of the court of appeal in chancery, having rank next after the chief baron of the exchequer, were appointed from 1 Oct. 1851, salary 6000*l*. For recent changes see *Appeal and King's Bench*.

**JUSTICIARS.** In ancient times the kings of England used to hear and determine causes; but it is declared by law that if the king cannot determine every controversy, he, to ease himself, may divide the labour among persons, men of wisdom and fearing God, and out of such to appoint judges. The Saxon kings of England appointed a judge after this manner, who was, in fact, the king's deputy. After the Norman conquest, the person invested with that power had the style of *Capitalis Justicia*, or *Justiciarius Angliæ*. These judges continued until the erection of the courts of king's bench and the common pleas. The first justiciars of England were Odo, bishop of Bayeux, and William Fitz-Osborne, in 1067; and the last was Philip Basset, in 1261, or Hugh le Despencer, 1263 (Henry III.). Authorities vary.

**JUSTICIARY, COURT OF**, see *Court of Justiciary*.

**JUSTINIAN CODE** compiled by a commission appointed by the emperor Justinian I. Feb. 528, wherein was written what may be termed the statute law (scattered through 2000 volumes reduced to fifty). It was promulgated, April, 529. To this code Justinian added the Digest or *Pandects*, the Institutes, and Novels, promulgated 16 Nov. 534. These compilations have since been called, collectively, the body of civil law (*Corpus Juris Civilis*).

**JUTE**, the fibres of two plants, the chonch and isbud (*Corchorus olitorius* and *Corchorus capsularis*), since 1830 extensively cultivated in Bengal for making gunnycloth, &c. Jute has been much manufactured at Dundee as a substitute for flax, tow, &c., and in July, 1862, assertions were made that it could be employed as a substitute for cotton. In 1853, 275,578 cwt.; in 1861, 904,092 cwt.; in 1871, 3,454,120 cwt.; in 1881, 4,928,805 cwt.; in 1887, 327,221 tons, of undressed jute were imported into the United Kingdom; in 1888, 313,828 tons; in 1890, 369,958 tons; 1896, 340,649 tons; 1900, 280,919 tons; 1901, 321,331 tons; 1902, 414,553 tons; 1903, 240,000 tons; 1904, 306,433 tons.

**JUVENILE OFFENDERS.** In 1838, an act was passed for instituting a prison for instructing and correcting juvenile offenders, and the military hospital at Parkhurst in the Isle of Wight was appropriated for this purpose. An act for their committal to reformatories was passed in 1854. Another act passed, 1901.

KARS, a town in Asiatic Turkey, captured by the Russians under Paskiewich, 15 July, 1828, after three days' conflict. In 1855 it was defended by general Fenwick Williams, with 15,000 men, and with three months' provisions and three days' ammunition, against the Russian general Mouravieff, with an army of 40,000 infantry and 10,000 cavalry. The siege lasted from 18 June to 28 Nov. 1855. The sufferings of the garrison were very great from cholera and want of food. The Russians made a grand assault on 29 Sept. but were repulsed with the loss of above 6000 men, and the garrison were overcome by famine alone. *Sandwith*. Kars was restored to Turkey, Aug. 1856.

On accepting general Williams' proposal for surrendering, general Mouravieff said:—"General Williams, you have made yourself a name in history; and posterity will stand amazed at the endurance, the courage, and the discipline which this siege has called forth in the remains of an army. Let us arrange a capitulation that will satisfy the demands of war, without disgracing humanity." In 1856 the general was made a baronet, with the title of sir William Fenwick Williams of Kars, and granted a pension; he died 26 July, 1883.

KEEPER OF THE KING'S CONSCIENCE. The early chancellors were priests, and out of their

supposed moral control of the king's mind grew the idea of an equity court in contradistinction to the law courts. A bill in chancery is a petition through the lord chancellor to the king's conscience for remedy in matters for which the king's common law courts afford no redress. The keeper of the king's conscience is therefore now the officer who presides in the court of chancery; see *Chancellor* and *Lord Keeper*.

**KEEPER (LORD) OF THE GREAT SEAL OF ENGLAND** differed only from the lord chancellor in that the latter had letters patent, whereas the lord keeper had none. Richard, a chaplain, is said to have been the first keeper under Ranulph, in 1116. Foss says that the distinction between the two offices was made 1232. The two offices were made one by 5 Eliz. 1563. *Conell*; see *Chancellor*. The office of lord keeper of the great seal of SCOTLAND was established in 1708, after the union.

His entertainment of the queen commenced 19 July, 1575, and cost the earl daily 1000*l*.

After the battle of Evesham and defeat and death of Simon de Montfort, by Prince Edward (afterwards Edward I.) 1265, Montfort's younger son, Simon, shut himself up in Kenilworth castle, which sustained a siege for six months against the royal forces of Henry III., to whom it at length surrendered. Upon this occasion was issued the "*Dictum de Kenilworth*," or "ban of Kenilworth," enacting that all who had borne arms against the king should pay him the value of their lands for periods varying from 7 years to 6 months.

An expedition sent against it by the emperor Nicholas of Russia in 1839 perished through the rigour of the climate in 1840. In 1875, colonel F. A. It was rebuilt in 1781, and contained about 230 rooms. Formerly, the debtors were allowed to purchase the liberties, to enable them to have houses or lodgings without the walls, or to purchase day-rules, to go out of the prison under certain regulations. The rules included St. George's Fields, &c. A consequence of the Bankruptcy act, 1861, was the release of many insolvent debtors; and an act was passed

**KINGSTOWN** (Dublin). The harbour here was commenced in June, 1817. The name was changed from Dunleary in compliment to George IV., who here embarked for England at the close of his visit to Ireland, 3 Sept. 1821. Kingstown railway from Dublin opened 17 Dec. 1834.

**KIOTO**, see *Kyōto*.

**KIRBEKAN, BATTLE OF**, see *Soudan*, 10 Feb. 1885.

**KIRKDALE CAVE**, see *Geology* (Buckland).

**KISHINEFF MASSACRES**, see *Russia* 19, 20 April, 1903.

**KISSING** the hands of great men was a Grecian custom. Kissing was a mode of salutation among the Jews, 1 *Samuel* x. 1, &c. The "kiss of charity," or "holy kiss," commanded in the Scriptures (*Romans* xvi. 16, &c.), was observed by the early Christians, and is still recognised by the Greek church and some others. Kissing the pope's foot (or the cross on his slipper) began with Adrian I. or Leo III. at the close of the 8th century.

**KIT-KAT CLUB**, of above thirty noblemen and gentlemen, instituted in 1703, to promote the Protestant succession. The duke of Marlborough, sir R. Walpole, Addison, Steele, and Dr. Garth were members. It took its name from its dining at the house of Christopher Kat, a pastry-cook in King-street, Westminster.

**KITT'S**, see *Christopher's, St.*

**KLADDERADATSCH**, the German "*Punch*," first published in Berlin, by Albert Hoffmann, the proprietor, originally a bookseller's assistant. He amassed a fortune, and died 10 Aug. 1880, aged 62.

**KLONDIKE GOLDFIELDS**, see *Canada*, 1897 *et seq.* Dawson City, the business centre, population, 1901, 4,500.

**KNEELING**. The knee was ordered to be bent at the name of Jesus (see *Philippians* ii. 10), about the year 1275, by the order of the pope. The ceremony of a vassal kneeling to his lord is said to have begun in the 8th century.

**KNIGHTS**. The word knight is derived from the Saxon *Cniht*, a servant (i.e., servant to the king, &c.). The institution of the Roman knights (*Equites* or horsemen, from *equus*, a horse), is ascribed to Romulus, about 750 B.C., when the curiae elected 300. Knighthood was conferred in England by the priest at the altar, after confession and consecration of the sword, during the Saxon heptarchy. The first knight made by the sovereign with the sword of state was Athelstane, by Alfred, A.D. 900. *Spelman*. The custom of ecclesiastics conferring the honour of knighthood was suppressed in a synod held at Westminster in 1100. *Ashmole's Institutes. Salmon*. On the decline of the empire of Charlemagne, all Europe being reduced to a state of anarchy, the proprietor of every manor became a petty sovereign; his mansion was fortified by a moat, and defended by a guard, and called a castle. Excursions were made by one petty lord against another, and the women and treasure were carried off by the conqueror. At length the owners of rich fiefs associated to repress these marauders, to make property secure, and to protect the ladies; binding themselves to these duties by a solemn vow, and the sanction of a religious ceremony. Cervantes' "*Don Quixote*," a satire on knight-errantry, was published in 1605; see *Banneret, Chivalry, Tournaments, Holy Sepulchre, John, and Michael*.

**FEMALE KNIGHTS.** It is said that the first were the women who preserved Tortosa from the Moors in 1149, by their stout resistance. Large immunities were granted to the women and their descendants. Several female orders appear in the preceding list. Ladies have been admitted to several male orders.

**KNIGHTS OF GLYN AND KERRY IN IRELAND.** The heads of two branches of the family of Fitzgenald, who still enjoy the distinctions bestowed on their ancestors by sovereigns in the 13th century. The 19th knight of Kerry died 6th Aug. 1880.

**KNIGHTS OF THE SHIRE, or OF PARLIAMENT;** summoned by the king's writ and chosen by the freeholders, first summoned by Simon de Montfort, in 1258, and in a more formal manner, 20 Jan. 1265. There are writs extant as far back as 11 Edward I., 1283. The knights are still girded with a sword when elected, as the writ prescribes.

**KNIGHTS OF LABOUR.** A large secret trade union in the United States, said to have been originated by a man named Uriah Stevens in Philadelphia in 1869, for protection of workmen against capitalists. They were energetic in the promotion of railway and other strikes, especially in Missouri in March, 1886. Headquarters at Philadelphia, number about 400,000, May, 1886. The society is condemned by the pope. Decline of the order reported Aug. 1883; active in Aug. 1890. *Knights of Industry* active in regard to strikes, 1893.

**KNIVES.** In England, Hallamshire (the country round Sheffield) has been renowned for its cutlery for five centuries; Chaucer speaks of the "Sheffield thwytel." Stow says that Richard Mathews on the Fleet-bridge was the first Englishman who made *fine* knives, &c.; and that he obtained a prohibition of foreign ones, 1563. Clasp or spring knives became common about 1650; coming originally from Flanders.—*Knife-cleaning machines* were patented by Mr. George Kent in 1844 and 1852; others have been invented, by Masters, Price, &c.; see *Forks*.

**KNOW-NOTHINGS,** a society which arose in 1853, in the United States of N. America. Their principles were embodied in the following propositions (at New York, 1855). They possessed several newspapers and had much political influence:—

1. The Americans shall rule America.
2. The Union of these States.
3. No North, no South, no East, no West.
4. The United States of America—as they are—one and inseparable.
5. No sectarian interferences in our legislation or in the administration of American law.
6. Hostility to the assumption of the pope, through the bishops, &c., in a republic sanctified by Protestant blood.
7. Thorough reform in the naturalisation laws.
8. Free and liberal educational institutions for all sects and classes, with the Bible, God's holy word, as a universal text-book.

A society was formed in 1855 in opposition to the above, called *Know-Somethings*. Both bodies were absorbed into the two parties, Democrats and Republicans, at the presidential election in Nov. 1856.

**KNOX, JOHN,** the great Scottish reformer (1505-1572). Quincentenary of his birth celebrated in Scotland, 1905.

**KNUTSFORD,** Cheshire. The foundation stone of St. Paul's college for the northern counties here was laid, 24 Sept. 1873.

**KOH-I-NOOR**, or "Mountain of Light," the East India diamond; see *Diamonds*.

**KOLA**, a West African nut, from which is obtained, by grinding, a stimulating and sustaining drug, much used by the natives in long journeys, enabling them to endure thirst and hunger. Kola nuts are much prized in the Soudan, the presentation of some of these nuts being esteemed a special honour. Known to traders since the 17th century. Dr. Daniell in 1865 discovered that the nuts contained an alkaloid identical with that found in tea, coffee, maté and guarana. Called also *Guru nuts*.

**KOLIN** or **KOLLIN** (Bohemia). Here the Austrian general Daun gained a signal victory over Frederick the Great of Prussia, 18 June, 1757. In commemoration, the military order of Maria Theresa was instituted by the empress-queen.

**KÖLN**, see *Cologne*.

**KOMORN** or **COMORN** (Hungary), an ancient fortress town, often taken and retaken during the wars with Turkey. Near it the Hungarians, under gen. Klapka, defeated the Austrians, 11 July, 1849, but surrendered the town 1 Oct.

**KONIEH** (formerly Iconium). Here the Turkish army was defeated by the pasha of Egypt, after a long sanguinary fight, 21 Dec. 1832. The grand vizier was taken prisoner.

**KÖNIGGRÄTZ** (Bohemia). Near here was fought the decisive battle between the Austrians commanded by marshal Benedek, and the Prussians commanded by their king William I., 3 July, 1866. Prince Frederick Charles halted at Kammenitz on Monday, 2 July, his troops commenced their march at midnight, and the first shot was fired about 7.30 a.m. 3 July. The attack began at Sadowa (after which the battle is also named) about 10 o'clock, and a desperate struggle ensued, the result appearing uncertain, till the army of the crown prince of Prussia arrived about 12.30. When Chlum, which had been taken and lost seven times by the Prussians, was taken for the eighth time, the fate of the day was decided; and the retreat of the Austrians, at first orderly, became a hasty disastrous flight. About 400,000 men were engaged in this battle, one of the greatest in modern times. The Austrians are said to have lost 174 guns, about 40,000 killed and wounded, and 20,000 prisoners. The Prussians lost about 10,000 men. The victory gave the supremacy in Germany to Prussia, unity to North Germany, and Venetia to Italy; and led to the legislative independence of Hungary.

**KÖNIGSBERG**, the capital of east Prussia, was founded by the Teutonic knights in 1255, and became the residence of the grand master in 1457. It joined the Hanseatic league in 1365. University founded, 1544. It was ceded to the elector of Brandenburg in 1657, and here Frederick III. was crowned the first king of Prussia in 1701. It was held by the Russians 1758-64, and by the French in 1807. Here king William I. and his queen were crowned, 18 Oct. 1861; his monument unveiled by the emperor, 4 Sept.; the emperor at a banquet censures the nobles for opposing his plans, promises additional grants to the province, and declares that he reigns by Divine right, 6 Sept. 1894. Population, in 1885, 151,151; 1890, 161,528; 1900, 187,897. *Königsberg Trial*, see *Germany*, 25 July, 1904.

**KÖNIGSTEIN TUN** (Nassau, Germany), most capacious, was built by Frederick Augustus,

king of Poland, in 1725. It was made to hold 233,667 gallons of wine; and on the top, which was raised in, was accommodation for twenty persons to regale themselves. The famous tun of St. Bernard's was said to hold 800 tons; see *Heidelberg Tun*.

**KOOKAS**, a warlike reforming sect in N. W. India, founded by Baluk Ram about 1845, and after his death, about 1855, headed by Ram Singh, who preached the restoration of the old Sikh religion, which venerated cattle and punished their slaughterer. After several outrages against the Mahometans, an outbreak of the Kookas took place near Loodiana, which was vigorously suppressed, 15 Jan. 1872, by commissioner Cowan, who ordered 49 prisoners to be blown from cannon, 17 Jan. Several others were tried and executed by commissioner Forsyth soon after. For this severity Mr. Cowan was ordered to be dismissed, and Mr. Forsyth removed to another station, April, 1872. The Kooka leaders claim 800,000 followers; but the probable number is about one-tenth.

**KORAN** or **ALCORAN** (**AL KURAN**), the sacred book of the Mahometans, was written about 610, by Mahomet (who asserted that it had been revealed to him by the angel Gabriel in twenty-three years), and published by Abu-bekr about 635. Its general aim was to unite the professors of idolatry and the Jews and Christians in the worship of one God (whose unity was the chief point inculcated), under certain laws and ceremonies, exacting obedience to Mahomet as the prophet. The leading article of faith preached is compounded of an eternal truth and a necessary fiction, namely, that there is only one God, and that Mahomet is the apostle of God. *Gibbon*. The Koran was translated into Latin in 1143; into French, 1647; into English by Sale, 1734; and into other European languages, 1763 *et seq.* It is a rhapsody of 6000 verses, divided into 114 sections; see *Mahometanism*, &c.

**KOREA**, see *Corea*.

**KOREISH**, an Arab tribe which had the charge of the Caaba, or shrine of the sacred stone of Mecca, and strenuously opposed the pretensions of Mahomet. It was defeated by him and his adherents, 623-30.

**KOSSOVA**, see *Cossova*.

**KOSZTA AFFAIR**. Martin Koszta, a Hungarian refugee, when in the United States in 1850, declared his intention of becoming an American citizen, and went through the preliminary forms. In 1853 he visited Smyrna, and on 21 June was seized by a boat's crew of the Austrian brig *Huzzar*. By direction of the American minister at Constantinople, captain Ingraham, of the American sloop *St. Louis*, demanded his release; but having heard that the prisoner was to be clandestinely transported to Trieste, he demanded his surrender by a certain time, and prepared to attack the Austrian vessel on 2 July; Koszta was then given up. On 1 Aug., the Austrian government protested against these proceedings in a circular addressed to the European courts, but eventually a compromise was effected, and Koszta returned to the United States.

**KOYUNJIK**, the site of the ancient Nineveh (which see).

**KRAAL**, a Dutch name for a South African village. See *Zululand*. Women visitors excluded from the Kaffir kraal in the Savage South African exhibition, Earl's Court (opened May, 1899), 28 Aug.; the action upheld by Mr. Justice Cozens-Hardy, 8 Sept. 1899.

**KRAKATOA**, see *Java*, 1883.

**KRAO**. A hairy female Burmese child exhibited at the Westminster Aquarium, Jan. 1883; thought incorrectly by some to be a specimen of the missing link between man and the anthropoid apes.

**KRASNOI** (central Russia). Here the French defeated the Russians, 15 Aug. 1812; and here they were themselves defeated after a series of conflicts, 14-18 Nov. following.

**KREASOTE**, see *Creasote*.

Various remedial proposals were dismissed.

**LABOUR QUESTION**. The relations between capital and labour have been much discussed in recent years. See *Germany*, 1889-90; *Berlin*, *Strikes*, *Trades Union*, *Shipping*, *Gas Light*, *Working-men* (Labour Day), 1 May, 1890-5, *United States*, 1 Sept. 1890-5, *Unemployed*.

The labyrinth of Woodstock is connected with the story of Fair Rosamond; see *Rosamond*. The Maze at Hampton Court was formed by William III. in the 17th century.

**LAC**, see *Lakh*.

**LACE** is said to have been made in the 14th century in France and Flanders. Its importation into England was prohibited in 1483; but it was used in the court costume of Elizabeth's reign. Dresden, Valenciennes, Mechlin, and Brussels have long been famous for their fine lace. An ounce weight of

Flanders thread has been frequently sold for four pounds in London; and its value, when manufactured, has been increased to forty pounds, ten times the price of standard gold. A framework knitter of Nottingham, named Hammond, is said to have invented a mode of applying his stocking-frame to the manufacture of lace from studying the lace on his wife's cap, about 1768. *Macculloch*. So many improvements have been made in this manufacture, particularly by Heathcote (1809, 1817, &c.), Morley and Leaver (1811, &c.), that a piece of lace which about 1809 cost 17l. may now be had for 7s. (1853). *Ure*. The process of "gassing" by which cotton lace is said to be made equal to fine linen lace, was invented by Samuel Hall of Basford, near Nottingham. He died in Nov. 1862. Seguin's "La Dentelle; Histoire," &c., published, 1874. Irish lace exhibition at the Mansion House, London, 25 June-7 July, 1883. **LACEDÆMON** or **LACONIA** (*Tzakonia*), see *Sparta*.

**LA CROSSE**. Originally a game played by the Canadian Indians, it was adopted successively by the French and English settlers, and introduced into the United States and Great Britain. The game is played with an indiarubber ball, 8 or 9 in. in circumference, and a long stick, 5 or 6 ft. in length, curved at the top like a bishop's crook (*crosse*, whence the name), across which strings of deerskin are stretched diagonally forming a net. The object of the game is to drive the ball through goals situated at each end of the field. The players are usually 12 a side. The rules of the game were systematised by Dr. Beers in 1860. In 1867 the La Crosse association of Canada was founded, and an Indian team visited Great Britain. The principal associations in Great Britain are the North of England association, formed 1880; the South of England association, 1882, and the English Union, 1892, which governs all international matters, including the laws of the game.

See *Spanish-American War*.

**LADY**. The masters and mistresses of manor-houses, in former times, served out bread to the poor weekly; and were therefore called *Lafords* and *Lef-days*—signifying *bread givers* (from *hlaf*, a loaf): hence Lords and Ladies. Wedgewood considers this fanciful, and derives the words from the Anglo-Saxon, *laford*, lord, and *hlæfdig*, lady.—**LADY DAY** (March 25), a festival instituted about 350, according to some authorities, and not before the 7th century according to others; see *Annunciation*. The year, which previously began on this day, was ordered to begin on Jan. 1, in France in 1564; and in Scotland, by proclamation, on 17 Dec. 1599; but not in England till 3 Sept. 1752, when the style was altered.

**LADY-BIRDS**. About 18th August, 1869, great flights of these insects alighted on the S.E. coasts of England, and arrived as far as London; a similar event occurred in 1867.

Gen. sir George White and his forces, and the naval brigade under capt. (now rear-adm.) Lambton, whose naval guns rendered great service, were shut up (but making gallant sorties during the interval) until relieved, 28 Feb. 1900, by the Natal Carbineers and Imperial horse, under lord Dundonald, see *South African War*. **LAGOS**, an island in the Bight of Benin (Africa), was assaulted and taken by the boats of a British squadron, under commodore Bruce, 26, 27 Dec. 1851. This affair arose out of breaches of a treaty for the suppression of the slave-trade. In 1861, the place was ceded to the British government, and created a settlement: Henry Stanhope Freeman, first governor. Lagos was constituted a distinct colony in 1886, comprising several native kingdoms. Area of island 4 square miles, protectorate 26,700 square miles. Population, 1901, island, 41,000; protectorate, 1,500,000. See *Gold Coast Colony*.

**LAKE DWELLINGS** contain relics of the stone, iron, and bronze ages. Herodotus (about 450 B.C.) described the Pæonians as living on platforms in Lake Prasias. In 1855, Dr. Keller discovered the remains of lake habitations which had been supported on piles in several Swiss lakes ages ago. His book was published in England in 1866. Similar relics discovered in lake Constance, March, 1882; they have also been discovered in Britain and various parts of Europe, Africa, and South America; they are now considered to be evidence of a stage in human progress. The artificial fortified islands termed "Crannoges" discovered in some Irish lakes are attributed to the 9th and 10th centuries. They have been frequently used as places of refuge. *Artificial lake*, see under *Liverpool*, 1881 et seq.

Mr. Arthur Bulleid, in the spring of 1892, discovered, by excavation, near Glastonbury, in Somersetshire, remains of a pre-historic lake-village, in about 60 low mounds, enclosing wooden structures, many of which had been probably workshops. The many interesting relics of bronze, iron, bone, &c., with fragments of pottery, were deposited in the Glastonbury museum; R. Munro, M.D., "Lake Dwellings of Europe," Sept. 1892; excavations continued . . . 1897

**LAMAISM**, the religion of Mongolia and Tibet (dating about 1357), is a corrupt form of Buddhism (which see). The present system of the Lama hierarchy is reputed to have been founded by the great Lamaist reformer Tsong Kha pa in the 14th century. There are three priestly orders, the chief being the Lama popes, the *Dalai-lama*, "priest as wide as the ocean," and the *Pan-chen*, next are the *Khutuktus*, and the third degree, the ordinary priesthood, of the *Khubilghans*. See *Tibet*.

**LAMBETH**, parish, N. E. Surrey, became the seat of the abps. of Canterbury, 1197. Lambeth returns four members by act of 1885; municipal borough by London Government act, 1899 (10 aldermen, 60 councillors). Population, 1891, 279,202; 1901, 301,895.

**Lambeth Palace**. A considerable portion was built in the 13th century, by Hubert Walter, archbishop of Canterbury. The tower of the church was erected about 1375; and other parts of

the edifice in the 15th century. Simon of Sudbury, archbishop of Canterbury, was killed here by the followers of Wat Tyler, who attacked the palace, burnt the furniture and books, and destroyed the registers and public papers, 14 June, 1381. The domestic portion of the palace was greatly enlarged for archbishop Howley (who died 1848), by Mr. Blore, at an expense of 52,000*l.* The palace was reopened after restoration, Oct. 1873; see *Canterbury, Articles*. For Lambeth Conferences see *Pan-Anglican Synods*. Lambeth bridge was freed from toll 24 May, 1879.

**LAMMAS-DAY**, the 1st of August, one of our four cross quarter-days of the year. Whitsuntide was the first, Lammas the second, Martinmas the third, and Candlemas the last; and such partition of the year was once equally common with the present divisions of Ladyday, Midsummer, Michaelmas, and Christmas. Some rents are yet payable at each of these quarterly days in England, and very generally in Scotland. *Lammas* probably comes from the Saxon *hlammæsse*, loaf mass, because formerly upon that day our ancestors offered bread made of new wheat. Anciently, those tenants that held lands of the cathedral church of York were by tenure to bring a lamb alive into church at high mass.

**LAMPETER COLLEGE** (Cardiganshire), was founded by bishop Burgess in 1822, and incorporated 1828.

**LAMPS**. The earthen lamp of Epictetus the philosopher sold after his death for 3000 drachmas. Lamps with horn sides said to be the invention of Alfred. London streets were first lighted with oil-lamps in 1681, and with gas-lamps in 1814. A lamp "constructed to produce neither smoke nor smell, and to give considerably more light than any lamp hitherto known," was patented by M. Aimé Argand in 1784, and was brought into general use in England early in the nineteenth century. On his principle are founded the lamps invented by Carcel about 1803, and since 1825, the moderator lamps of Levasseur, Hadrot, and Neuburger. See *Safety Lamp*. Paraffin oil and naphtha spirit are now much used in lamps. The Water Safety Lamp invented by Mr. Devoll, was tried and approved 2 June, 1890. The flame is extinguished by the water if the lamp is overturned. The Kitson oil lamp, in which petroleum is burnt as gas, used successfully in Portland-place, May, 1901. See *Petroleum*.

**LANCASTER**, supposed to have been the *Ad Alaunum* of the Romans. Lancaster was granted by William I. or II. to Roger de Poitou, who erected a castle upon its hill. It was taken by the Jacobites, Nov. 1715 and Nov. 1745. It was disfranchised for bribery by the Reform act of 1867. The public park, value about 23,000*l.*, was presented by Mr. Jas. Williamson, of Rylands, 21 Nov. 1881. The Storey Institute (technical), founded by Sir Thomas Storey (died, aged 73, 13 Dec. 1898), by a gift of 20,000*l.*, in memory of the queen's jubilee in 1887, when he was mayor, opened by the marquis of Hartington, 23 Oct. 1891. **LANCASTERIAN SCHOOLS**, based on a system of education by means of mutual instruction, devised by Joseph Lancaster about 1796, were not much patronised till about 1808. The system led to the formation of the British and Foreign School society, in 1805, whose schools are unsectarian, and use the Bible as the only means of religious instruction. Lancaster was accidentally killed at New York in 1838.

**LANCET**, a weekly medical journal, established and edited by Thomas Wakley, surgeon (afterwards coroner for Middlesex and M.P. for Finsbury), first published 3 Oct. 1823. An injunction obtained by Mr. Abernethy against the publication of his lectures in the "*Lancet*," was dissolved by the lord chancellor in 1825. Mr. Wakley, born 1795, died 16 May, 1862. The proprietors of the "*Lancet*" have at various times employed medical men as commissioners of enquiry. The reports of the Analytical Sanitary Commission of the "*Lancet*" in 1851-54, were published by Dr. A. H. Hassall, as "*Food and its Adulterations*," in 1855. The "*Lancet*" commissioners (three physicians) enquired into the state of workhouse infirmaries in London, 1865, and in the country, 1867.

**LAND** is said to have been let generally in England for 1*s.* per acre, 36 Hen. VIII. 1544. The whole rental of the kingdom was about 6,000,000*l.* in 1600; about 14,000,000*l.* in 1688. In 1798 Mr. Pitt proposed his income tax of 10 per cent. on an estimate of 100 millions, taking the rent of land at 50 millions, that of houses at 10 millions, and the profits of trade at 40 millions; but in his estimate were exempted much land, and the inferior class of houses. The rental of the United Kingdom was estimated at 59,500,000*l.* in 1851. The rateable value of land in England was 39,835,000*l.* in 1870; 33,654,000*l.* in 1894. An act for rendering the transfer of land more easy was passed in 1862; see *Agriculture, Domesday*, old and new.

**LANDWEHR** (German, *land-defence*). A force so named was raised in Austria in 1805, and in Prussia in 1813, against the French. This force, the militia of Germany, especially of Prussia, was very effective in the war with Austria in 1866,

and in that with France in 1870. No ranks in life are exempt from this service, and many persons in foreign countries returned to serve in 1870.

**LANGUAGE** must either have been revealed originally from heaven, or the fruit of human invention. The latter opinion is embraced by Horace, Lucretius, Cicero, and most of the Greek and Roman writers; the former by the Jews and Christians, and many modern philosophers. Some suppose Hebrew to have been the language spoken by Adam; others say that the Hebrew, Chaldee, and Arabic are only dialects of the original tongue. "And the whole earth was of one language and of one speech" (*Genesis* xi. 1). \* George I. in 1724, and George II. in 1736, appointed regius professors of modern languages and of history to each of the universities of England.

The original European languages were thirteen, viz.: Greek, Latin, German, Slavonian, spoken in the east; Welsh; Biscayan, spoken in Spain; Irish; Albanian, in the mountains of Epirus; Tartarian; the old Illyrian; the Jazygian, remaining yet in Liburnia; the Chaucin, in the north of Hungary; and the Finnic, in east Friesland.

From the Latin sprang the Italian, French, Spanish, and Portuguese.

The Turkish is a mixed dialect of the Tartarian. From the Teutonic sprang the present German, Danish, Swedish, Norwegian, English, Scotch, &c.

There are 3424 known languages, or rather dialects, in the world. Of these, 937 are Asiatic; 587 European; 276 African; and 1624 American languages and dialects.

*Adelung*. In 1861 and 1862 professor Max Müller lectured on the "Science of Language" at the Royal Institution, London. He divides languages into three families:—

I. **ARYAN** (in Sanskrit, *noble*).  
*Southern Division*. India (Prakrit, and Pali; Sanskrit; dialects of India; Gipsy).

Iranic (Persi; Armenian, &c.).  
*Northern Division*. Celtic (Cymric; Cornish, Welsh, Manx, Gaelic, Breton, &c.).

Italic (Oscan; Latin; Umbrian;—Italian, Spanish, Portuguese, French, &c.).

Illyric (Albanian).  
Hellenic (Greek, and its dialects).  
Wendic (Lettic; Old Prussian; *Slavonic dialects*,—Bohemian, Russian, Polish, Lithuanian, &c.).

\* *Eminent Linguists*.—Anas Montanus, editor of the Antwerp Polyglott Bible (1527-28); sir Wm. Jones (1746-94); Cardinal Giuseppe Mezzofanti (1774-1849) is said to have known 114 languages or dialects, and 50 well; and Niebuhr (1776-1831) knew 20 languages in 1807, and more afterwards; Hans Conon von der Gabelentz knew many languages critically: he died 3 Sept. 1874, aged nearly 67. Solomon Cesar Malan (1812-94), eminent in Oriental languages, see *Indian Institute*.

LANGUE D'OC, see *Troubadours*.

LANGUEDOC (a province, S. France), formed part of the Roman Gallia Narbonensis ; was named Gothia, as having been held by the Visigoths 409, who were expelled by the Saracens, in turn driven out by Charles Martel in the 8th century. In the dark ages the country was named Septimania (probably from its containing seven important towns) : afterwards Languedoc (from its dialect, see *Troubadours*), about 1270, when annexed to the monarchy. It suffered during the persecutions of the Albigenes and Huguenots.

LANDSDOWN, near Bath (Somersetshire). The parliamentary army under sir Wm. Waller was here defeated, 5 July, 1643.

LANTERNS of scraped horn were invented in England, it is said, by Alfred ; and it is supposed that horn was used for window lights also, as glass was not generally known, 872-901. *Stow*. London was lighted by suspended lanterns with glass sides, 1415.

LAODICEA, see *Seven Churches*.

LAON (N. France). A succession of actions between the allies (chiefly the Prussians) and the French, was fought under the walls of the town, which ended in the defeat of the latter with great loss, 9-10 March, 1814. Laon surrendered to the Germans 9 Sept. 1870. As the last man of the garde mobile left the citadel, a French soldier, in contravention of the capitulation, blew up the powder magazine, causing great destruction to the town and fortress. The grand-duke William of Mecklenburg-Schwerin was bruised, and 95 German riflemen and 300 French garde mobiles were killed or wounded ; general Theremin Du Hame, the commander, was wounded. The French attributed the explosion to accident.

LA PEROUSE'S VOYAGE. In 1785 La Perouse sailed from France for the Pacific, with the *Boussole* and *Astrolabe* under his command,

and was last heard of from Botany Bay, in March, 1788. Several expeditions were subsequently despatched in search of Perouse ; but no certain information was obtained until captain Dillon, of the East India ship *Research*, ascertained that the French ships had been cast away on the New Hebrides, authenticated by articles which he brought to Calcutta, 9 April, 1828.

LAPLAND or SAMELAND (N. Europe), nominally subject to Norway in the 13th century, and now to Sweden and Russia. Several Laplanders were exhibited at the Westminster Aquarium, Nov. 1877.

LA PLATA, the capital of the Argentine province of Buenos Ayres, *which see*, was founded in 1882. Population in 1888, 65,000, 1895, 45,410. See *Wrecks*, 1874.

LARYNGOSCOPE, an instrument consisting of a concave mirror, by which light is thrown upon a small plane mirror placed in the posterior part of the cavity of the mouth. By its means the vocal chords of the interior of the larynx, &c., are exhibited, and have been photographed. It was invented by señor Manuel Garcia, and reported to the Royal Society 24 May, 1855. One constructed by Dr. Türk was greatly modified, in 1857, by Dr. Czermak, who exhibited its successful action in London in 1862. A similar apparatus is said to have been constructed by Mr. John Avery, a surgeon in London, in 1846. The British Laryngological and Rhinological Association was founded in 1888.

Señor Garcia received by king Edward VII. on his attaining his 100th birthday ; event celebrated by a reception and banquet, 17 March, 1905.

LATERAN, a church at Rome, dedicated to St. John, "the mother of all the churches," was originally a palace of the Laterani, a Roman family, and was given to the bishops of Rome by Constantine, and inhabited by them till their removal to the Vatican in 1377. Eleven councils have been held there.

LATHE. The invention is ascribed to Talus, a grandson of Dedalus, about 1240 B.C. Pliny ascribes it to Theodore of Samos, about 600 B.C. Great improvements have been made in recent times.

LATHOM-HOUSE (Lancashire), was heroically defended for three months against the parliamentarians, by Charlotte, countess of Derby. She was relieved by prince Rupert, 27 May, 1644. The house was, however, surrendered 4 Dec. 1645, and dismantled.

**LATIN KINGDOM, EMPIRE, &c.**, see *Latium*, *Eastern Empire* 1204, and *Jerusalem*.

**LATIN LANGUAGE**, a member of the Aryan family, and one of the original languages of Europe, from which sprang the Italian, French, and Spanish; see *Latium*. A large portion of our language is derived from the Latin. It ceased to be spoken in Italy about 581; and was first taught in England by Adelmus, brother of Ina, in the 7th century. The use of Latin in law deeds in England gave way to the common tongue about 1000; was revived in the reign of Henry II.; and again was replaced by English in the reign of Henry III. It was finally discontinued in religious worship in 1558, and in conveyancing and in courts of law in 1731 (by 4 Geo. II. c. 25). A corrupt Latin is still spoken in Roumelia. The foreign pronunciation of Latin (*a*, ah; *e*, a; *i*, e, &c.) was adopted in English universities and many schools about 1875-6. For "Latin name," see *Latium*.

**LATIN UNION** (Monetary), that of France, Italy, Belgium, and Switzerland, to maintain the use of the same coinage, from 1865 *et seq.*; re-constituted in 1885; arranged to be continued from year to year, autumn 1889; renewed till 31 Dec. 1893, Oct. 1891; conference at Paris, 9 Oct. 1893.

**LATITAT**, an ancient writ, directing the sheriff to apprehend persons to be brought before the king's bench court, had its name from its being supposed that the person was lying hid, and could not be found in the county to be taken by bill. The writ was abolished by the Uniformity of Process act, 23 May, 1832.

**LATITUDE**. First determined by Hipparchus of Nice, about 162 B.C. It is the extent of the earth or the heavens, reckoned from the equator to either pole. Maupertuis, in 1737, in latitude 66°20 measured a degree of latitude, and made it 69,493 miles. Swanberg, in 1803, made it 69,292. At the equator, in 1744, four astronomers made it 68°7'32; and Lambton, in latitude 12, made it 68°7'43. Mudge, in England, made it 69°148. Cassini, in France, in 1718 and 1740, made it 69°12; and Biot, 68°769; while a recent measurement in Spain makes it but 68°63—less than at the equator, and contradicts all others, proving the earth to be an oblate spheroid (which was the opinion of Cassini, Bernoulli, Euler, and others), instead of a prolate spheroid; see *Longitude*.

**LATITUDINARIANS**, a name given to certain theologians who endeavoured to reconcile

the church and nonconformists in the 17th century, such as Hales, Chillingworth, Tillotson, and Burnet.

LA VENDEE (W. France). The French royalists of La Vendée took arms in March, 1793, and were successful in a number of hard-fought battles with the republicans, between 12 July, 1793, and 1 Jan. 1794, when they experienced a severe reverse. Their leader, Henri comte de La-rochejaquelein, was killed, 4 March, 1794. A short peace was made at La Jaunay, 17 Feb. 1795. The war was terminated by gen. #### LAW REFORM.

LAW AMENDMENT SOCIETY, founded in 1843. It holds meetings during the session of parliament, and publishes a journal and reports. Its first chairman was lord Brougham, who introduced the subject of Law Reform by a most eloquent speech in the house of commons, on 7 Feb. 1848. Many acts for Law Reform have been passed since, and vigorous measures proposed.

Royal commission to inquire into the operation and constitution of the English courts of law, &c., issued 18 Sept. 1867.

The Judicature Commission (appointed 1867) recommended the consolidation of all the superior courts into one supreme court divided into chambers, April, 1869. It issued its fifth and last report, Sept. 1874.

The High Court of Justice Bill introduced into the house of lords, 18 March, 1870, was dropped near the end of the session.

Royal Commission on the administrative departments of Courts of Justice (Lord Lisgar and others) appointed, 4 Oct., 1873.

Supreme Court of Judicature Bill introduced by lord chancellor Selborne for establishing a High Court of Justice, and a High Court of Appeal 13 Feb., passed 5 Aug. 1873.

LAW-COURTS.—Commissioners appointed in 1859 reported in favour of the concentration of the law-courts in London, on a site near Carey-street, Chancery-lane, about 7 acres, on which stood about 400 houses. The estimated expense was about 1,500,000*l.*, which it was recommended to take from the accumulated Chancery fund, termed "Suitors' fund." Acts of parliament to carry out the plan were passed in 1865 and 1866.

Competitive designs were invited, and after much discussion (public and professional), Mr. Street's design was selected, 30 May, 1863; much attacked, but approved by the commission, Aug. 1870; contracts signed 17 Feb. 1874, and the works were begun immediately by Bull and Son, to be finished in 1881.

There were to be 18 courts, varying in size; a central hall, 231 feet long, 48 feet wide, 30 feet high; principal entrance in the Strand.

Offices in Eastern Block occupied 21 April, 1879.

Buildings completed, Oct. 1882.

Opened by queen Victoria, 4 Dec. 1882.

All the buildings constitute by statute the *Palace of Justice*.

The Courts occupied Hilary sittings, 11 Jan. 1883.

**LAW'S BUBBLE.** John Law, of Edinburgh (born 1681), was made comptroller-general of the finances of France, upon the strength of a scheme for establishing a bank, and an East India and a Mississippi company, by the profits of which the national debt of France was to be paid off. See *Mississippi*. He first offered his plan to Victor Amadeus, king of Sardinia, who told him he was not powerful enough to ruin himself. The French ministry accepted it; and in 1716, he opened a bank in his own name, under the protection of the duke of Orleans, regent of France, and the deluded rich subscribed for shares both in the bank and the companies. In 1718 Law's was declared a royal bank, and the shares rose to upwards of twenty-fold the original value; so that, in 1719, they were worth more than eighty times the amount of all the current specie in France. In 1720 this fabric of false credit fell to the ground, spreading ruin throughout the country. Law died in poverty at Venice in 1729.—The South Sea Bubble in England occurred in 1720; see *South Sea*.

**LAWN TENNIS** is an offspring of tennis (*which see*). Major Wingfield is the reputed originator of the game introduced by him in 1874, under the name of *Sphæristike*, a compromise between tennis and Badminton. Various modifications have taken place since, including the lowering of the net from 5 ft. at the sides, and 4 ft. in the middle, to 3 ft. 6 in. at the sides, to 3 ft. in the middle, and the bringing of the "service-line" from 26 ft. to 21 ft. distance from the net. In the single game the inner court 27 ft. wide is used, the 36 ft. for the double game. The national lawn tennis association, founded 1888, controls the laws, etc., relating to the game.

**LAYBACH** (near Trieste, in Illyria). A congress met here in Jan. 1821, and was attended by the sovereigns of Austria, Russia, Prussia, and Naples. It broke up in May, after having issued two circulars, stating it to be their resolution to

**LAZZARONI** (from *lazzaro*, Spanish for a pauper or leper), a term applied by the Spanish viceroys to the degraded beings in Naples, half-clothed and houseless. No man was born a lazzaro; and he who turned to a trade ceased to be one. The viceroy permitted the lazzaroni to elect a chief with whom he conferred respecting the imposts on the goods brought to the markets. In 1647, Masaniello held the office, and made an insurrection; see *Naples*. In 1793, Ferdinand IV. enrolled several thousands of lazzaroni as pikemen (spontoneers), who generally favoured the court party; on 15 May, 1848, they were permitted, on the king's behalf, to commit fearful ravages on the ill-fated city.—*Colletta*.

**LEAD** is found in various countries, and is abundant in various parts of Britain, and in some places richly mixed with silver ore. The famous Clydesdale mines were discovered in 1513. Pattinson's valuable method for extracting the silver was made known in 1829. The lead-mines of Cumber-

**LEAP-YEAR** or **BISSEXTILE**, originated with the astronomers of Julius Caesar, 46 B.C. They fixed the solar year at 365 days, 6 hours, comprising, as they thought, the period from one vernal equinox to another; the six hours were set aside, and at the end of four years, forming a day, the fourth year was made to consist of 366 days. The day thus added was called *intercalary*, and was placed a day before the 24th of February, the sixth of the calends, which was reckoned *twice*, hence called *bissextile* or *twice sixth*. This added day with us is Feb. 29th; see *Calendar*. This arrangement makes the year nearly three minutes longer than the astronomical year: to obviate this, 1700, 1800, and 1900 were not leap-years, but 2000 will be one; see *Calendar* and *Year*.

**LEARNING** AND **THE ARTS** flourished among the Greeks, under Pisistratus, 537 B.C., and especially under Pericles, 444 B.C.; and with the Romans at the commencement of the Christian era, under Augustus. The Greek refugees caused their revival in Italy, particularly after the taking of Constantinople by the Turks in 1453, and the invention of printing shortly before,—the period of the *Renaissance*. Leo X. and his family (the *Medici*) greatly promoted learning in Italy, in the 16th century; when literature revived in France, Germany, and England; see *Literature*, and authors under *Greek*, *Latin*, *English*, and other languages.

**LEATHER** was very early known in Egypt and Greece, and the thongs of manufactured hides were used for ropes, harness, &c., by all ancient nations. The Gordian knot was made of leather thongs, 330 B.C. A leather cannon was proved at Edinburgh, fired three times, and found to answer, 23 Oct. 1778. *Phillips*. The duty on leather imposed 1697, produced annually in England, 450,000*l.* and in Ireland about 50,000*l.* It was abolished, 29 May, 1830. Many bankruptcies were declared in the leather trade, in the autumn of 1860 in England. In the case of Lawrence, Mortimore, and Co., enormous fraudulent dealings in bills were disclosed. A plan for making artificial leather out of cuttings, &c., was made known in 1860.—*Leather cloth* (invented by Messrs. J. R. & C. P. Crockett, of Newark, U.S., and patented in 1849) is unbleached cotton coated with a mixture of boiled linseed oil and turpentine, and coloured. C. Brodie (1813-17). Mr. G. Macilwain, about 1824, gave surgical clinical lectures in connection with a dispensary. The political lectures of Thelwall, commenced in Jan. 1795, were interdicted by an act of parliament. In the autumn of 1857 and since, many distinguished noblemen and gentlemen lectured at mechanics' institutes. An act passed in 1835 prohibited the publication of lectures without the consent of the lecturers. See *Gresham College*, *Boyle's Lectures*, *Royal and London Institutions*, *Trials*, 1887, &c.

Augustus had a standing army of 45 legions, together with 25,000 horse and 37,000 light-armed troops, about 5 B.C.; and the peace establishment of Adrian was thirty of these formidable brigades. It comprehends the castle of St. Angelo, the hospital of San Spirito, the Vatican palace and gardens, and St. Peter's. Its possession was allotted to pope Pius IX. when the Italian royal troops entered Rome, 20 Sept. 1870. About 1500

inhabitants of the Leonine city voted for union with the kingdom of Italy, 2 Oct. 1870.

**LEONINES**, hexameter and pentameter verses, rhyming at the middle and the end, are said to have been first made by Leoninus, a canon, about the middle of the 12th century, or by pope Leo II. about 682.

**LEPANTO** (near Corinth), Battle of, 7 Oct. 1571: when the combined fleets of Spain, Venice, Genoa, Malta, and Pius V., commanded by don John of Austria, defeated the whole maritime force of the Turks, and completely checked their progress.

**LEPROSY**, a skin disease described in *Leviticus* xiii. (B.C. 1490), which prevailed in ancient times throughout Asia. It has now almost disappeared from Europe. It chiefly affected the lower classes, yet occasionally proved fatal to the very highest personages. Robert Bruce of Scotland died of leprosy in 1329. A hospital for lepers was founded at Granada, by queen Isabella of Castile, about 1504, and a large number of leper houses were founded in Britain. Dr. Edmondson met with a case in Edinburgh in 1809.

The great increase of leprosy in the Sandwich Islands compelled the government to isolate the lepers, and large numbers were transported to Molokai, where they endured much suffering. Since 1873 Father Joseph Damien (de Venster), R. C. Belgian missionary, devoted his whole life most successfully to their general relief, and finally died of their disease, aged 49, 10 April, 1889 (succeeded by Father Wendolin). Other missionaries, male and female, are continuing his labours.

The *Father Damien Memorial Fund*, under the auspices of the prince of Wales, was founded about 18 June, 1889; and on 29 June it was determined to set up a memorial statue of Father Damien at Kalawao, and to establish a fund for the medical treatment of the disease in the United Kingdom, and for the promotion of the study of it at home and abroad, especially in India.

feated Pompey's lieutenants, 49 B.C. It was made the residence of the kings of Aragon, 1149. It was captured for Philip V. by the French under the duke of Orleans, 13 Oct. 1707, and by Suchet, 13 May, 1810.

**LEUCTRA**, in Boeotia, N. Greece, where the Thebans under Epaminondas defeated the superior force of Cleombrotus, king of Sparta, 8 July, 371 B.C. 4000 Spartans, with their king, were slain. The Spartans gradually lost their preponderance in Greece.

**LEVANT** (the East), a term applied to Greece, Turkey, Asia Minor, &c. Levant companies, in London, were established in 1581, 1593, and 1605.

**LEVELLERS**, a fanatical party in Germany, headed by Muncer and Storck in the 16th century, who taught that all distinctions of rank were usurpations on the rights of mankind. At the head of 40,000 men, Muncer commanded the sovereign princes of Germany and the magistrates of cities to resign their authority; and on his march his followers ravaged the country. The landgrave of Hesse at length defeated him at Frankenhäusen, 15 May, 1525; 7000 of the enthusiasts fell in the battle, and the rest fled; their leader was taken and beheaded at Mulhausen. The English "Levellers," powerful in parliament in 1647, were put down by Cromwell in 1649, and their leader Lilburn was tried and acquitted. At the period of the French revolution some Levellers appeared in England. A "Loyal Association" was formed against them by John Reeves, Nov. 1792.

**LEVELS**. The great Level of the Fens is a low-lying district of about 2000 square miles, in Lincolnshire, Huntingdonshire, Cambridgeshire, and Norfolk, said to have been overflowed by the sea during an earthquake, 368. It was long afterwards an inland sea in winter, and a noxious swamp in summer, and was gradually drained—by the Romans, the Saxons, and especially by the monks during the reigns of the Plantagenet kings. One of the first works on a large scale was carried out by Morton, bishop of Ely, in the reign of Henry VII. A general drainage act was passed by the advice of lord Burghley, in 1601, but little work was done till the reign of James I., who, in 1621, invited over the great Dutch engineer, Cornelius Vermuyden, to assist in the general drainage of the country. After completing several great works, Vermuyden agreed (in 1629) to drain the "Great Level." He was at first

prevented from proceeding with his undertaking through a popular outcry against foreigners; but eventually, aided by Francis, earl of Bedford, in spite of the great opposition of the people, for whose benefit he was labouring, he declared his great work complete in 1652. He also reclaimed much valuable land at Axholme, in Lincolnshire, 1626-30, and many Dutch and French protestants settled here about 1634; and a few of their descendants still remain.—There are the Middle, Bedford, South, and North Levels.

The drainage of the Great Level employed the talents of Rennie (about 1807), and of Telford (1822), and of other eminent engineers. The Middle Level commission cut through certain barrier banks, and replaced them by other works. These were reported unsound in March, and the outfall sluice at St. Germain's, near King's Lynn, gave way. High tides ensuing, about 6000 acres of fertile land were inundated, causing a loss of about 25,000*l*. After unwearied, and, for a while, unsuccessful efforts, a new coffer dam was constructed under the superintendence of Mr. Hawkshaw, which was reported sound. Another inundation, begun through the bursting of a marshland sluice, near Lynn, was checked. New outfall sluice opened.

**LEVERIAN MUSEUM**, formed by sir Ashton Lever, exhibited to the public at Leicester-house, London; it was offered to the public, in 1785, by the chance of a guinea lottery, and won by Mr. Parkinson, in 1785, who sold it by auction, in lots, May-July, 1806.

**LEVIATHAN**, see *Steam Navigation*.

**LEWES** (Sussex), where Henry III., king of England, was defeated by Montfort, earl of Leicester, and the barons, 14 May, 1264. *Blaauw*. The king, his brother Richard, king of the Romans, and his son Edward, afterwards Edward I., were taken prisoners. One division of Montfort's army, a body of Londoners, gave way to the furious attack of prince Edward, who, pursuing the fugitives too far, caused the battle to be lost; see *Evesham*. Population, 1881, 11,199; 1891, 10,997; 1901, 11,249.

**LEXICON**, see *Dictionaries*.

**LEXINGTON** (Massachusetts), Battle of, at the beginning of the war of independence. The British obtained the advantage, and destroyed the stores of the revolted colonists, but lost in the battle 273 men, killed and wounded, 19 April, 1775. The hostilities thus commenced continued to 1783.—**LEXINGTON**, a town in Missouri, U.S., fortified by the Federals, was attacked by the confederate general Price, on 29 Aug., and after a gallant resistance by colonel Mulligan, surrendered on 21 Sept. 1861.

Between 31 Oct. 1573, and 3 Oct. 1574, when it was relieved, it endured two sieges by the armies of Spain, during which 6000 of the inhabitants died of famine and pestilence. In commemoration the university was founded, 1575. In 1699 two-thirds of the population perished by a fever, which, it was said, was aggravated by its improper treatment by professor De la Boe. The university was almost destroyed by a vessel laden with 10,000 lbs. weight of gunpowder blowing up and demolishing a large part of the town, and killing numbers of people, 12 Jan. 1807. The *Leyden* jar was invented about 1745, by Kleist, Muschenbroek, and others; see *Electricity*. Population, 1890, 43,510; 1900, 54,421.

Special scientific and mercantile instruction is given in addition to the ordinary classical and modern sides. Head master, Rev. W. T. A. Barber, D.D.

**LIBEL**. By the Roman laws of the Twelve Tables, libels which affected the reputation of another were made capital offences. In the British law, whatever renders a man ridiculous, or lowers a man in the opinion and esteem of the world, is deemed a libel. "The greater the truth the greater the libel," the well-known law maxim of a high authority, is now disputed; see *Trials*, 1788, 1790, 1792, 1803, 1808 *et seq.*, 1863, 1882 *et seq.*; and (note) *Patents and Times*.

An action for libel was brought in the court of King's Bench by a bookseller named Stockdale, against Messrs. Hansard, the printers to the house of commons; this action related to an opinion expressed in a parliamentary report of a book published by Stockdale, 7 Nov. 1836. Lord Denman, in giving judgment, said he was not aware that the authority of the house of commons could justify the publication of a libel—an opinion which led to some proceedings on the part of the house, and to other actions by Stockdale . . . 1837-39

Verdicts were given in his favour, and in Nov. 1839, the sheriffs took possession of Hansard's premises. This caused much excitement in parliament, and they were ordered to appear at the bar of the house of commons, and were formally committed to the custody of the serjeant-at-arms, 21 Jan., but immediately discharged: the conflict was maintained by the law officers and the commons till . . . **LICHFIELD** (Staffordshire). The see of Mercia (at Lichfield) was founded about 656; removed to Chester, 1075; to Coventry, 1102. In 1121 Robert Peche was consecrated bishop of Lichfield and Coventry. By an order in council, Jan. 1837, the archdeaconry of Coventry was added to the see of Worcester, and Dr. Samuel Butler became bishop of Lichfield. This see has given three saints to the Romish church; and to the British nation one lord chancellor and three lord treasurers. It is valued in the king's books at 55*l.* 18*s.* 2*d.* Present income, 4,200*l.* Population, 1881, 8,349; 1891, 7,864; 1901, 7,902.

Lichfield cathedral was first built about 656; the present structure was founded by Roger de Clinton, the 37th bishop, in 1148. Walter de Langton (bishop in 1296), built the chapel of St. Mary, now taken into the choir, and under bishop Heyworth (1420) the cathedral was perfected. The building was despoiled at the Reformation, and was scandalously injured in the parliamentary war (when its monuments, its fine sculptures, and beautifully painted windows, were demolished). It was repaired at the restoration, 1660; in 1783; and by Gilbert G. Scott, 1860-63 and 1884.

In Lichfield castle, king Richard II. kept his Christmas festival, 1397, when 200 tuns of wine and 2000 oxen were consumed. A charter was granted to Lichfield, constituting it a city, by Edward VI., 1549. It was absorbed into the county in 1885.

**LICINIAN LAWS.** In 375 B.C., C. Licinius Stolo and L. Sextius, tribunes of the people, promulgated various rogations or laws to weaken the power of the patricians and benefit the plebeians: one was to relieve the plebeians from their debts; another enacted that no person should possess more than 500 jugera of the public land, or more than 100 head of large cattle, or 500 of small, in the Roman states; and the third, that one of the consuls should be a plebeian. After much opposition these were carried, and L. Sextius became the first plebeian consul, 366. Another law, 56 B.C., of this name, imposed a severe penalty on party clubs, or societies assembled for election purposes; and another, about 103 B.C. (brought forward by P. Licinius Crassus), limited the expenses of the table.

**LIÈGE** (Belgium), a bishopric, under the German empire, from the 8th century till 1795. Liège frequently revolted against its prince-bishops. After a severe contest, the citizens were beaten at Brusthem, 28 Oct. 1467, and Liège taken by Charles the Bold, duke of Burgundy, who treated them with great severity. In 1482 Liège fell into the power of De la Marek, the Boar of Ardennes, who killed the bishop, Louis of Bourbon, and was himself defeated and killed. Liège was taken by the duke of Marlborough, 23 Oct. 1702; and by the French and others, at various times, up to 1796, when it was annexed to France. It was incorporated with the Netherlands in 1814, and with Belgium in 1830. Iron-works were established at Liège in the 16th century, and have been greatly enlarged by the Cockerills in the 19th, see *Seraing*. **LIFE-PRESERVER**, the apparatus of capt. Manby (brought into use in Feb. 1808), effects a communication with the distressed vessel by a rope, thrown by a shot from a mortar, with a line attached to it. For the night, a night-ball is provided with a hollow case of thick pasteboard, and a fuse and quick match, and charged with fifty balls, and a sufficiency of powder to inflame them. The fuse is so graduated that the shell shall explode at the height of 300 yards. The balls spread a brilliant light for nearly a minute, and give a clear view of every surrounding object. In 20 years, 58 vessels and 410 of their crews and passengers had been saved. Capt. Manby died 18 Nov. 1854, aged 89. See *Rockets*.

**LIGHT**. The law of refraction discovered by  
 Snellius, about 1624. The motion and velocity of  
 light discovered by Reaumur, and after him by  
 Cassini, and calculated by Rømer (1676) and  
 Bradley (1720). Its velocity ascertained to be about  
 190,000,000 of miles in sixteen minutes, or nearly  
 200,000 miles in a second, which is a million of  
 times swifter than the velocity of a cannon ball,  
 about 1667. The light of the sun takes eight  
 minutes and eight seconds for its transmission  
 through space to the earth. See *Emission Theory*.  
 The undulatory theory of light, its polarisation, and  
 its chemical action, were all made known in the nine-  
 teenth century by Dr. Thos. Young, Weber, Fresnel,  
 Malus, Arago, Biot, Brewster, Wheatstone, Ritter,  
 Niepce, Daguerre, Talbot, Stokes, Tyndall, Ray-  
 leigh, Dewar, Crookes, &c.; see *Optics*, *Photo-  
 graphy*, *Calorescence*, *Fluorescence*, *Röntgen Rays*,

**Velocity of Light**. Direct determination by the  
 toothed-wheel method by Fizeau agreed with the  
 astronomical result 1849

Foucault, with the revolving mirror, gave 298,000  
 kilometres in a second of mean time 1865

Cornu's improved tooth-wheel apparatus gave  
 300,400 kilometres in a second of mean time 1874

Professor Simon Newcomb, of Washington, with  
 his "phototachometer" (completed in May, 1880)

gave 299,860 kilometres in a second of mean time, 1886

Mr. (aft. sir) Wm. Crookes, F.R.S., considered that he  
 had demonstrated the mechanical action of light by ex-  
 periments with delicate balances in the highest procurable  
 vacuum, and calculated the force of the sun's rays upon  
 the earth to be 2.3 tons to the square mile, 1873-6.  
 His apparatus was termed *Radiometer* (which see).  
 After much investigation, Mr. Crookes admitted that the ac-  
 tion was not due to radiation, but to difference of heat-  
 absorption and the reaction of residual air.

**LIGHTHOUSE**, called *Pharos* (now *phare*,  
 French; *faro*, Italian), from one erected at *Pharos*,  
 (which see) near Alexandria, Egypt, 550 feet high,  
 said to have been visible forty-two miles, about 283  
 B.C. There was one at Messina, at Rhodes, &c.  
 The light was obtained by fires. A coal-fire light  
 was exhibited at Tynemouth castle, Northumber-  
 land, about 1638. The first true lighthouse erected  
 in England was the Eddystone lighthouse (which  
 see) in 1758-60. Lights were exhibited in various  
 places by the corporation of the Trinity-house early  
 in the 16th century. 2814 lighthouses in the world  
 (1867).

#### BRITISH LIGHTHOUSES.

The lighthouse (40 years old, height 80 feet, weight 300  
 tons) on the pier at Sunderland, Durham, was moved  
 forward 500 feet without stopping the illumination,  
 under the superintendence of Mr. John Murray,  
 October, 1841.

The Commissioners on Lights, &c. (1861), report 171  
 shorelights in England, 113 in Scotland, and 73 in  
 Ireland (total, 357); and 47 floating-lights.  
 The French have 224 lighthouses on shore.

The source of light in our lighthouses is principally  
 oil; but in harbour lights gas has been successfully  
 used. Glass reflectors were used in 1780, and copper  
 ones in 1807. A common coal-fire light was discon-  
 tinued at St. Bees in 1822. Fresnel's Dioptric system  
 (which see), devised about 1819, was adopted for the  
 first time in England by Messrs. Wilkins, at the  
 direction of the corporation of the Trinity-house, 1 July,  
 1836.

The most brilliant artificial light ever produced—derived  
 from magneto-electricity by a machine devised by  
 professor Holmes—was first employed at the South  
 Foreland lighthouse, near Dover, on 8 Dec. 1858; and  
 at Dungeness in 1862. Mr. Holmes' arrangement, and  
 a similar one constructed by M. Serin, were shown  
 at the International exhibition, London, in 1862.

Mr. H. Wilde's apparatus for producing a most powerful  
 magneto-electric light, on trial in northern light-  
 houses, Oct. 1866.

Lime-light (which see) employed at the S. Foreland light-  
 house in 1861.

Gas light tried successfully at Howth Bailey lighthouse,  
 Dublin Bay, July, 1869.

Mr. Wigham's triflorin light: glass belt round the gas-  
 light, prisms below the belt, and prisms forming a  
 cupola: tried near Dublin; approved by Dr. Tyndall,  
 July, 1873; further improvements by Mr. J. R.  
 Wigham, shown, Dec. 1894.

 36,559l.; and the Bell Rock, Scotland, 117 feet high,  
 61,331l.

 salaries, &c. issued early in Dec. 1883.

Important experiments at South Foreland on electricity,  
 gas, and oil as illuminants, June, 1884. Report  
 adopted by Trinity House: electric light brightest,  
 but most expensive; gas and oil nearly equal; oil re-  
 commended for practical purposes; electricity for  
 special use on headlands, &c., about 25 Aug. 1885.

 between lighthouses met, 18 June, 1892. First report  
 issued recommending electric communication between  
 25 lighthouses (adopted), 1 Feb. 1893; final report  
 issued, 15 Oct. 1897.

**LIGHTING UP** (Towns, &c.), see *London*, 1684, 1694; *Gas and Electric Light*.

**LIGHTNING-CONDUCTORS** were first set up for the protection of buildings by Franklin shortly after 1752, when he brought down electricity from a thunder-cloud. Richmann, of St. Petersburg, was killed while repeating these experiments, Aug. 1752. The first conductor in England was set up at Payne's Hill, by Dr. Watson. In 1766 one was placed on the tower of St. Mark, at Venice, which has since escaped injury, although frequently injured by lightning previously. A powder magazine at Glogau, in Silesia, was saved by a conductor in 1782; and, from the want of one, a quantity of gunpowder was ignited at Brescia in 1767, and above 3000 persons perished. In 1762, Dr. Watson recommended conductors to be used in the navy; and they were employed for a short time, but soon fell into disuse from want of skill and attention. Mr. (afterwards sir William) Snow Harris devoted his attention to the subject from 1820 to 1854, and published a work, in 1843, detailing his experiments. In 1830, above thirty ships were fitted up with his conductors, and in 1842 his plans were adopted, and his conductors are now manufactured in the royal dockyards. In 1854 parliament granted him 5000*l*. A lightning research committee formed, Jan. 1901, with a view to the better protection of buildings, 200 observers in the United Kingdom, and others abroad. 713 deaths by lightning in the United States in 1900 (291 in the open, 57 under trees, 158 in houses).

**LIGHT SHIPS**, floating beacons guarding dangerous sandbanks and shoals. Those round the English coast are under the control of Trinity-house. The first English light vessel was placed at the Nore in 1825, and there were 52 in position off the coast of England in December, 1905. There is only one light vessel on the Scottish coast under the control of the Northern Lighthouse board, 84 George-street, Edinburgh. It is the North Carr established in 1887.

from Persia was cultivated in England about 1638; the common lilac by Mr. John Gerard about 1597.

**LILLE** (formerly *Lisle*), N. France, has a strong citadel by Vauban. It was besieged by the duke of Marlborough and the allies; and, though deemed impregnable, was taken after a three months' siege in 1708. It was restored by the treaty of Utrecht, in 1713, in consideration of the demolition of the fortifications of Dunkirk. *Lisle* sustained a severe bombardment from the Austrians, who were obliged to raise the siege, 7 Oct. 1792. Population, 1886, 188,272; 1891, 200,935; 1901, 215,431.

Industrial exhibition here visited by sir Wilfrid Laurier and other colonial premiers. 27 Aug. 1900.

**LILLI-BURLERO**, part of the refrain of a popular song ridiculing the Irish papists, 1688. The words are attributed to lord Wharton, the music to Henry Purcell.

**LIMA** (Peru). In 1534, Pizarro, marching through Peru, was struck with the beauty of the valley of Rimac, and there he founded this city, and gave it the name of *Ciudad de los Reyes*, or city of the kings, 1535. Here he was assassinated, 26 June, 1541. Awful earthquakes occurred here, 1586, 1630, 1687, and 28 Oct. 1746. In 1854-5, thousands perished by yellow fever. Mr. Sullivan, the British consul, was assassinated at Lima, 11 Aug. 1857; see *Peru*, 1872, 1881-3. Buildings injured by an earthquake, 20 Sept. 1897. The church of San Francisco, founded by Pizarro, 1535, burnt, 20 Sept. 1899. Earthquake, the most violent experienced for 30 years, causes great damage, 4 Mar. 1904. Population, 1900, 105,000.

**LIMBURG** (Netherlands), a duchy in the 10th century; acquired by the dukes of Brabant about 1288; added to Burgundy about 1429; passed to the house of Austria in 1477; became one of the United Provinces, 1609; conquered and annexed to the French republic, 1795; restored to the Netherlands, 1814; divided between Holland and Belgium, 1830; completely separated from the German confederation by treaty, 11 May, 1867.

**LIME** or **LINDEN TREE**, probably introduced in the 16th century. The limes in St. James's park are said to have been planted at the suggestion of Evelyn, who recommended multiplying odoriferous trees, in his "*Fumifugium*" (1661). A lime-tree planted in Switzerland in 1470, existed in 1720, the trunk being thirty-six feet in circumference.

**LIME-LIGHT**, produced by the combustion of oxygen and hydrogen or carburetted hydrogen on a surface of lime. This light evolves little heat and does not vitiate the air. It is also called *Drummond Light*, after its inventor, Lieut. Thomas Drummond, who successfully produced it as a first-class light in 1826, and employed it on the ordnance survey. It is said to have been seen at a distance of 112 miles. It was tried at the South Foreland lighthouse in 1861. Lieut. Drummond was born, 1797, died

15 April, 1840. To him is attributed the maxim that "property has its duties as well as its rights."

**LIMERICK**, anciently *Lumneach* (S. W. Ireland). About 550, St. Munchin is said to have founded a bishopric and built a church here, which latter was destroyed by the Danes in 853. Donald O'Brien, king of Limerick, founded the cathedral about 1200. Limerick obtained its charter in 1195, when John Stafford was made first provost; and its first mayor was Adam Servant, in 1198. It was taken by Ireton after six months' siege in 1650. In Aug. 1690 it was invested by the English and Dutch, and surrendered on most honourable terms, 3 Oct. 1691.\* An awful explosion of 218 barrels of gunpowder greatly shattered the town, killing 100 persons, 1 Feb. 1694. Another explosion of gunpowder here killed many persons, 2 Jan. 1837. Awful and destructive tempest, 6-7 Jan. 1839. A new graving-dock was opened by the lord-lieutenant, earl Spencer, 13 May, 1873. A new R. C. cathedral, St. John's, consecrated, 21 June, 1894. Mr. Michael Hogan, "The bard of Thomond," died, aged 66, 19 April, 1899. The right rev. Dr. Graves, bp. of Limerick, an antiquarian, dies, 17 July, 1899, succeeded by Dr. T. Bunbury, 6 Oct. Population, 1881, 38,555; 1891, 37,072; 1901, 38,085.

**LIMITATIONS, STATUTE OF**, 21 James I. c. 16, 1623. By it actions for trespass or debt, or simple contract, must be commenced within six years after the cause of action, and actions for assault, menace, or imprisonment within four years. The Real Actions Limitation act, 1874, came into operation 1 Jan. 1879.

**LIMITED LIABILITY**. An act for limiting the liability of joint stock companies, 18 & 19 Vict. c. 133 (passed 1855), was several times amended 1856-7-8. On 31 May, 1864, "3830 joint stock companies had been formed and registered on the limited liability principle, and 935 had ceased to exist." Much calamity in 1866 was occasioned by the abuse of the system. The Companies act of 1862 was amended in 1867. 1241 registered in 1874; 1,791 registered in 1886; total 1862-86, 25,042. The principle adopted by some joint stock banks in 1879-80. New Companies act passed, 8 Aug. 1900. See under *Banks*.

**LIMOGES AFFAIR**, see *France*, Dec. 1877.

**LIMOURS MURDERS**, N.-central France. Several barbarous murders, especially of aged people, took place here, Jan., Sept., Nov., 1873, and Jan. 1874; several persons denounced, proved innocence. In June, 1874, one Poirier confessed to similar murders at Nogent and other places, in Nov. 1873 and Jan. 1874. Executed at Chartres, 29 Sept. 1874.

This treaty was annulled by the Irish parliament, 1695. Limerick is still called "the city of the broken treaty."

Without Newport-gate upon Lincoln plain was fought the battle between the partisans of the empress Maud, commanded by the earl of Gloucester, and the army of Stephen, in which the king was defeated and taken prisoner, 2 Feb. 1141. Louis, dauphin of France, invited over by the discontented barons in the last year of king John's reign, was acknowledged by them as king of England here; but the nobility, summoned by the earl of Pembroke to Gloucester to crown Henry III., marched against Louis and the barons, and defeated them in a most sanguinary fight (called the Fair of Lincoln), 20 May, 1217; and Louis withdrew. Theatre Royal burnt, 26 Nov. 1892. Population, 1881, 37,313; 1891, 41,491; 1901, 48,783.

**LINCOLN, BISHOPRIC OF**. Sidnacester or Lindisae and Dorchester, two distinct sees in Mercia, were united about 1078, and the see was removed to Lincoln by bishop Remigius de Feschamp, who built a cathedral (1086), afterwards destroyed by fire, but rebuilt by bishop Alexander (1127) and bishop Hugh of Burgundy. The diocese is very large, although the dioceses of Ely (1109), Oxford, and Peterborough (1541) were formed from it, and were further enlarged in 1837. The see was valued at the dissolution of monasteries at 2065*l.* per annum; and after many of its manors had been seized upon, it was rated in the king's books at 894*l.* 10*s.* 1*d.* Present income, 4500*l.* It has given three saints to the church of Rome, and to the civil state of England six lord chancellors. **LINCOLN'S-INN** (London), derives its name from Henry de Lacy, earl of Lincoln, who erected a mansion on this spot in the reign of Edward I., which had been the bishop of Chichester's palace. It became an inn of court, 1310. The gardens of Lincoln's-inn-fields were laid out by Inigo Jones, about 1620, and erroneously said to occupy the same space as the largest pyramid of Egypt, which is 764 feet square; Lincoln's-inn square being 821 feet by 625 feet 6 inches. William lord Russell was beheaded in Lincoln's-inn-fields, 21 July, 1683. The square (formed in 1618) was enclosed with iron railings about 1737. The new hall and other buildings were opened, 30 Oct. 1845, and the square planted. The theatre in Lincoln's-inn-fields was built in 1695; rebuilt in 1714; made a barrack in 1756, and pulled down in 1848. **LINNÆAN SYSTEM** of botany, arranged by Linné or Linneus, a Swede, 1725-30. He classed the plants according to the number and situation of the sexual parts, and made the flower and fruit the test of his various genera. Linneus lived from 1707 to 1778. His library and herbarium were purchased by sir James E. (then Dr.) Smith, and given to the *Linnean Society* in London, which was instituted in 1788, and incorporated 26 March, 1802; at Milan, about 20 Sept. 1892.

**LIONS**. True lions belong to the old world exclusively. They existed in Europe, Egypt, and Palestine, but have long disappeared from those countries; their present country being Africa. A lion named Pompey died in the Tower of London in 1760, after 70 years' confinement.

Mr. Gordon Cumming, the lion-slayer, published his "Sporting Adventures in South Africa" in 1850. Van Amburgh was very successful in taming lions; but many have perished through rashness. The Lion-queen was killed at Chatham, 1850; and Massarti (John McCarthy) was killed by a lion, 3 Jan. 1872.

Government of the Principality submits to the diet statement setting forth the situation respecting the regency in regard to the protest of the emperor and of the government of Schaumburg-Lippe, and affirming that no manifestations against count Leopold's succession can have any legal effect in view of the law passed by the diet in 1898. **LISMORE** (S. Ireland). St. Carthagh, first bishop, 636, says: "Lismore is a famous and holy city, of which nearly one-half is an asylum where no woman dare enter." The castle (built by king John when earl of Moreton, 1185), burnt in 1645, was rebuilt with great magnificence by the duke of Devonshire. The cathedral, built 636, was repaired by Cormac, son of Muretas, king of Munster, about 1130. The bishopric was united to that of Waterford, about 1363; and both to Cashel in 1839.

**LISSA** (or Leuthen, Silesia). Here the king of Prussia vanquished Charles of Lorraine; 6000 Austrians were slain, 5 Dec. 1757. — **LISSA**, in Poland, was laid in ruins by the Russian army in the campaign of 1707. — **LISSA**, an island in the Adriatic. Near here the Italian fleet, commanded by Persano, was defeated with severe loss by the Austrian fleet, commanded by Tegethoff, 20 July, 1866. The Italians had 23 vessels, 11 of which were ironclads, and the Austrians had 23 vessels, 7 only being ironclads.  
 Persano, when in sight of the enemy, quitted his ship, the *Ré d'Italia*, and hoisted his flag on the *Afonadore*. His ironclads did not keep well together.

During the action, the ironclad *Paletro* took fire and exploded, and all on board perished (except

19 out of 200 men), exclaiming, *Viva il Rè! Viva Italia!* The *Ré d'Italia* was surrounded and sunk by the Austrians. The *Ré di Portobello* disabled the Austrian line-of-battle ship *Kaiser*, and compelled her to run ashore. Both parties soon after retired from the conflict, which had lasted four hours.

**LITANIES** (Greek *litaneia*, supplication), were first used in processions, it is said, about 469; others say about 400. Litanies to the Virgin Mary were first introduced by pope Gregory I. about 595. The first English litany was commanded to be used in the Reformed churches by Henry VIII. in 1544.

**LITERARY CLUB** (at first called "The Club" and "Johnson's Club"), founded by Dr. Johnson and sir Joshua Reynolds, in 1764. Hawkins, Topham Beauclerk, Goldsmith, Burke, and Bennet Langton, were among the first members. The opinion formed of a new work by the club was speedily known all over London, and had great influence. Many eminent men have been members of the Club, including Hallam, Macaulay, the marquis of Lansdowne, and bishop Blomfield; Dr. Milman, dean of St. Paul's, was in the chair at the centenary dinner, on 7 June, 1864.

**LITERARY AND ARTISTIC CONGRESS**, International, met at Paris (Victor Hugo, president), 17 June; and founded "International Literary Association," 28 June, 1878; met in London, 9-14 June, 1879. Frequent meetings since.

**LITERARY FUND, ROYAL**, was founded in 1790, to relieve literary men of all nations, by David Williams,\* the friend of Benjamin Franklin, and incorporated in 1818. The king of the Belgians presided at the annual dinner, 8 May, 1872; the prince of Wales at the centenary dinner, 14 May, 1890; the duke of York, when chairman, 8 May, 1895, stated that among his predecessors were his great-grandfather, the duke of Kent, 1815, and his grandfather, the prince consort. The permanent fund in 1897 was 15,091*l.* 19*s.* 3*d.*; 15,591*l.*, 1898; 57,769*l.*, 1902; 56,410*l.*

\* Floyer Sydenham, an eminent Greek scholar, of Wadham college, Oxford, and translator of some of the works of Plato, was arrested and thrown into prison for a trifling debt due for his frugal meals, and there, in 1788, died of a broken heart in want and misery, when nearly eighty years of age. The sympathy excited gave rise to this institution, since well supported. Williams was in early life a dissenting minister, and wrote on education. He was consulted by the early revolutionary party in France as to the form of a constitution for that country; he, Dr. Priestley, sir James Mackintosh, and other distinguished Englishmen, having been previously declared French citizens. He died 29 June, 1816.

*Language*; comprehends eloquence, poetry, history, language, and their subdivisions. *Literature*, a weekly critical journal, edited by H. D. Traill (died, aged 58, 21 Feb. 1900), issued at the *Times* office, but independent, price sixpence, 23 Oct. 1897. "Short histories of the literatures of the world," Japan, by W. G. Aston, May, 1899.

**LITHIUM**, the lightest metal known (specific gravity 0.59; atomic weight 7), is obtained from an alkaline substance termed *lithia*; discovered by M. Arfwedson, a Swede, in 1817.

**LITHOFRACTEUR**, or "STONE-BREAKER," an explosive material, a modification of dynamite (composed of gun-cotton, nitro-glycerine, with the constituents of gunpowder, and other substances), invented by professor Engels of Cologne, and made by Krebs, in 1869. It was occasionally used by the Germans in the war 1870-1, and was tried and well reported of for power and safety at Nant Maw quarry, near Shrewsbury, 9, 10 May, 1871, and again on 20 Feb. 1872, before the government explosive committee, with similar results.

**LITHOGRAPHY** (drawing on stone). The invention is ascribed to Alois Senefelder, about 1796; and shortly afterwards the art was announced in Germany, and was known as *polyautography*. It became partially known in England in 1801 *et seq.*, but its general introduction is referred to Mr. Ackermann, of London, about 1817. Senefelder died in 1841. Improvements have been made by Engelmann and many others; see *Printing in Colours*. Exhibition of lithographs (2000) at S. Kensington, opened, 21 Nov. 1898. "Wharf-litho," Mr. G. R. Hildyard's new process, 1899.

**LITHOSCOPE**. An instrument for distinguishing precious stones, invented by sir David Brewster; described by him Jan. 1864.

**LITHOTOMY**. The surgical operation of cutting for the stone, it is said, was performed by Ammonius, about 240 B.C. The "small apparatus," so called from the few instruments used in the operation, was practised by Celsus, about A.D. 17. The "high apparatus" was practised (on a criminal at Paris) by Colot, 1475; by Franco, on a child, about 1566; and in England, by Dr. Douglass, about 1519. The "lateral operation," invented by Franco, much performed in Paris by Frère Jacques, in 1697, has been greatly improved. The "great apparatus" was invented by John de Romanis, and described by his pupil Marianus Sanctus, 1524.

**LITHOTRITY** (or bruising the stone). The apparatus produced by M. Leroy d'Etiolles in 1822 has since been improved.

Prizes of 6000 and 10,000 francs were awarded M. Jean Cliviale for his method of operation, 1827 & 1829.

**LITHUANIA**, formerly a grand-duchy, N. E. of Prussia. The natives (belonging to the Slavonic race) long maintained their independence against the Russians and Poles. In 1386, their grand-duke Jagellon became king of Poland and was baptized: Lithuania was not incorporated with Poland till 1501, when another duke Casimir became king of that country. The countries were formally united in 1569. The larger part of Lithuania now belongs to Russia, the remainder to Prussia. Great fire at Grodno, buildings destroyed, reported, 3 Aug. 1899.

**LITTLE ENGLANDISM**, a term defined by sir Edward Grey as an *aimless antipathy to the British Empire*, *Times*, 18 July, 1901.

**LITURGIES** (from the Greek *leitōs*, public, and *ergon*, work). The Greek and Roman liturgies are very ancient, having been committed to writing about the 4th and 5th centuries. The Romish church recognises four: the Roman or Gregorian, the Ambrosian, the Gallican, and the Spanish or Mosarabic. The Greek church has two principal liturgies: St. Chrysostom's and St. Basil's, and several smaller ones. Parts of these liturgies are attributed to the Apostles, to St. Ignatius, 250, to St. Ambrose (died 397), and to St. Jerome (died 420).

The present English Liturgy was first composed, and was approved and confirmed by parliament, in 1547-8. The offices for morning and evening prayer were then put into nearly the same form in which we now have them, and published 1549 and 1552.

At the solicitation of Calvin and others, the liturgy was reviewed and altered 1551

It was first read in Ireland, in the English language, in 1550, and in Scotland, where it occasioned a tumult, in 1637, and was withdrawn 1638

The Liturgy was revised by Whitehead, formerly chaplain to Anne Boleyn, and by bishops Parker, Grindall, Cox, and Pilkington, dean May, and secretary Smith.

John Knox is said to have used a liturgy for several years. The rev. Robert Lee, of Edinburgh, introduced a form of prayer in public worship, but gave it up when ordered to discontinue it in May, 1859; he soon after resumed it, and the discussion on the subject ceased only at his death, 14 March, 1868

See *Common Prayer*.

**LIVERIES OF THE CITY OF LONDON**. The term is derived from the custom of the retainers of the lord mayor and sheriffs wearing clothes of the form and colour displayed by those functionaries. Liveries were regulated by statute in 1392, and frequently since. The nobility gave liveries to their retainers. See *Companies*.

**LIVERPOOL** (W. Lancashire), is supposed to be noticed in Domesday-book under the name *Emmedune*, or *Smedune*.\* Soon after the conquest, William granted that part of the country situated between the rivers Mersey and Ribble to Roger of Poitiers, who, according to Camden, built a castle here, about the year 1089. It afterwards was held by the earls of Chester and dukes of Lancaster. Liverpool is the second city of the Empire. The income of the estates of the Corporation 131. in 1672, now over 12,500,000*l.*, from renewal fines, &c. Changes in the leases, &c., proposed by the Corporation postponed, Jan. 1888. \* In other ancient records its appellations are *Lithberpud* and *Lyrpud*, signifying probably in the ancient dialect, the lower pool; though some have deduced its etymology from a pool frequented by an aquatic fowl, called the "Liver," or from a sea-weed of that name; and others, from its having belonged to a family of the name of Lever, whose antiquity is not sufficiently established to justify their conclusion.

Lollards' tower, part of the bishop's prison, was near St. Paul's. *Dr. Maitland.*

**LOMBARDISTS**, disciples of Peter Lombard, the schoolman, bishop of Paris, author of the "Book of Sentences," who died in 1164.

**LOMBARD MERCHANTS**, in England, were understood to be composed of natives of some one of the four republics of Genoa, Lucca, Florence, or Venice. *Anderson.* Lombard usurers were sent to England by pope Gregory IX. to lend money to convents, communities, and private persons who were not able to pay down the tenths which were collected throughout the kingdom with great rigour that year, 13 Hen. III. 1299. They had offices in the street named after them to this day. Their usurious transactions caused their expulsion from the kingdom in the reign of Elizabeth.

**LOMBARDY** (N. Italy) derived its name from the Longobardi, a German tribe from Brandenburg, said (doubtfully) to have been invited into Italy by Justinian to serve against the Goths. Their chief, Alboin, established a kingdom which lasted from 568 to 774. The last king, Desiderius, was dethroned by Charlemagne. (For a list of the Lombard kings, see *Italy*.) About the end of the 9th century the chief towns of Lombardy fortified themselves, and became republics. The first *Lombard league*, consisting of Milan, Venice, Pavia, Modena, &c., was formed to restrain the power of the German emperors, in 1167. On 29 May, 1176, they defeated the emperor Frederick Barbarossa at Legnano, and eventually compelled him to sign the peace of Constance in 1183. In 1226 another *league* was formed against Frederick II., which was also successful. After this, petty tyrants rose in most of the cities, and foreign influence quickly followed. The Guelph and Ghibelline factions greatly distracted Lombardy; and from the 15th century to the present time, it has been contended for by the German and French sovereigns. The house of Austria obtained it in 1748, and held it till 1797, when it was conquered by the French, who incorporated it with the Cisalpine republic, and in 1805 with the kingdom of Italy. On the breaking up of the French empire in 1815, the **LOMBARDO-VENETIAN KINGDOM** was established by the allied sovereigns and given to Austria, who had lost her Flemish possessions. Lombardy and Venice revolted, and joined the king of Sardinia in March, 1848; but they did not support him well, and were again subjected to Austria after his defeat at Novara, 23 March, 1849. An amnesty for political offences was granted in 1856. Great jealousy of Sardinia was felt by Austria after 1849. In 1857 diplomatic relations were suspended; and in April, 1859, war broke out; the Austrians

crossing the Ticino and entering Piedmont. The French emperor declared war against Austria, and immediately sent troops into Italy. The Austrians were defeated at Montebello, 20 May; Palestro, 31 May; Magenta, 4 June; and Solferino, 24 June. By the peace of Villafranca (11 July), the largest part of Lombardy was ceded to Louis Napoleon, who transferred it to the king of Sardinia. It now forms part of the kingdom of Italy, to which Venice was also surrendered by the treaty of Vienna, 3 Oct. 1867. Population, 1890, 3,906,958; 1901, 4,278,188.

**LOMBOK**, an island in the Indian Archipelago, subject to the Dutch since 1863. See *Holland*, 1894 *et seq.*

**LONATO** (Brescia, N. Italy). Here Napoleon Bonaparte defeated Wurmser and the Austrians; Aug. 1796.

**LONDON**, the capital of the British empire. The earliest history is traditional. The Celtic name is said to have been *Lyn-din*, lake-fort; Tacitus in the first century, calls it *Londinium*, and describes it as a flourishing trading city; it was afterwards called *Augusta*, an appellation frequently given to great cities; several other forms of the name appear in documents, such as *Lundenbyrig*, *Lundonia*, and *London-wic*. In 1860, London and the suburbs were estimated to cover 121 square miles (11 miles each way, being three times as large as in 1800); in 1880, 122 square miles. London was constituted an "administrative" county by the local government act, 1888, including as rateable value seven-eighths of Middlesex, about two-thirds of Surrey, and nearly one-third of Kent. The population of the "city" in 1801, 156,859; in 1811, 120,909; in 1821, 125,434; in 1831, 125,574; in 1841, 125,008; in 1851, 122,440; in 1861, 112,063; in 1871, 74,807; in 1881, 50,652. Day census, 25-30 April, 201,001; 1891, 5 April, 37,694 (day census, 27 April, 301,384). For London and suburbs, 1801 *et seq.* see table in article *Population* (5 April, 1891, 4,231,431). *Inner London*, 4,392,346; *Outer Ring*, 1,656,204; total, 6,048,555, June, 1895. The town appears to have prospered under British, Roman, and Saxon rules, and to have been much indebted to Alfred and his successors, but suffered greatly by the Danes; it was not attacked by William I., by whom the citizens were conciliated, and its corporate government was recognized by his son Henry I. The city received many favours from the Plantagenet kings, but frequently resisted their exactions. London is governed by the lord mayor, the court of aldermen, the common council, and other offices. London was not included in the Municipal Corporations act, 1835. The London county council was constituted by the Local Government act passed in 1888.

\* This terrible pestilence broke out in India, and spreading itself westward through every country on the globe, reached England. Its ravages in London were so great that the common cemeteries were not sufficient for the interment of the dead, and various pieces of ground without the walls were assigned for burial-places. Amongst these was the waste land now forming the precincts of the Charter-house, where upwards of 50,000 bodies were then deposited. This disorder did not subside till 1357. *Leigh*.

† This proclamation or decree was dated from Nonesuch, 7 July, 1580, and it was forbidden to erect new buildings where none had before existed in the memory of man. The extension of the metropolis was deemed calculated to encourage the increase of the plague; create a trouble in governing such multitudes; a dearth of victuals; multiplying of beggars, and inability to relieve them; an increase of artisans more than could live together; impoverishing other cities for lack of inhabitants. The decree stated that lack of air, lack of room to walk and shoot, &c., arose out of too crowded a city. A proclamation to the same effect was also issued by James I.

Another bridge, erected by command of William II., was burnt in 1136. The late old bridge was commenced about 1176, by Peter of Colechurch, and completed in 1209, with houses on each side, connected together by large arches of timber which crossed the street.

A fire at the Southwark end brought crowds on the bridge; the houses at the north end caught fire likewise, and prevented their escape: and upwards of 3000 persons lost their lives, being either killed, burned, or drowned. July, 1212

There were no records of baptism till the 16th century. See *Abstinence*.

**LONGITUDE**, determined by Hipparchus, at Nice, who fixed the first degree in the Canaries, 162 B.C. Harrison made a time-keeper, in A.D. 1759, which in two voyages was found to correct the longitude within the limits required by the act of parliament 12 Anne, 1714; and obtained the reward; see *Harrison's Timepiece*. The chronometers of Arnold, Earnshaw, and Bréguet, are highly esteemed. Chronometers are now received on trial at Greenwich Observatory. The act relating to the discovery of the longitude at sea was repealed in 1828. The Bureau des Longitudes at Paris was established in 1795.

There were, in 1825, about 250,000 hand-loom in Great Britain, and 75,000 power-loom, each being equal to three hand-loom, making twenty-two yards each per day. The steam-loom was introduced in 1807; see *Colton, Electric-loom, Jacquard, Pneumatic-loom*.

The needle-loom, invented by a German family in the United States, substituting needles for shuttles, successful in weaving ribbons, &c., exhibited in London Nov. 1901

**LOOSHAIS**, a predatory nomadic Indian tribe, about 300 miles east of Calcutta. They frequently robbed the British tea plantations, killing the planters and carrying off their children. An expedition to chastise them was successful, Dec. 1871.

**LORD**, see *Lady*. When printed in the English Bible in small capitals LORD stands for Jehovah, the self-existing God, the name first revealed to Moses, 1491 B.C. *Exod.* vi. 3. When Lord is in

ordinary type, it represents *Adonai*, lord or master.

**LORD ADVOCATE, CHAMBERLAIN, CHANCELLOR**, &c., see *Advocate, Chamberlain, Chancellor*, &c.

**LORD OF THE ISLES**. A title borne by a race of chiefs who ruled the western islands of Scotland, descended from Somerled, the lord of Argyll, on whom these islands were conferred by David I. of Scotland after he had expelled the Norwegians from Arran and Bute, 1135. John the 4th and last lord of the isles was deprived of his title and estates by the Scottish parliament of May, 1493.

**LORD MAYOR**, see *Mayors*.

**LORD'S DAY ACT**, 29 Chas. II. c. 7, see *Sabbath*.

**LORD'S SUPPER**, instituted by Jesus Christ (*Matt.* xxvi. 17), 33, see *Sacrament* and *Transubstantiation*.

**LORDS**.\* The nobility of England date their creation from 1066, when William Fitz-Osborn is said to have been made earl of Hereford by William I.; and afterwards Walter d'Evreux, earl of Salisbury; Copsi, earl of Northumberland; Henry de Ferrers, earl of Derby; and Gherbod (a Fleming) earl of Chester. Twenty-two other peers were made in this sovereign's reign. The first peer created by patent was lord Beauchamp of Holt Castle, by Richard II. in 1387. In Scotland, Gilchrist was created earl of Angus by Malcolm III. 1037. In Ireland, sir John de Courcy was created baron of Kingsale, &c., in 1181; the first peer after the obtaining of that kingdom by Henry II.

**LORDS, HOUSE OF**. The peers of England were summoned *ad consulendum*, to consult, in early reigns, and by writ, 6 & 7 John, 1205; but the earliest writ extant is 49 Hen. III. 1265. The commons did not form a part of the great council of the nation until some ages after the conquest; see *Parliament*. The house of lords includes the spiritual as well as temporal peers of Great Britain. The bishops are supposed to hold certain ancient baronies under the king, in right whereof they have seats in this house. Some of the temporal lords sit by descent, and some by creation: others by election, since the union with Scotland in 1707, and with Ireland, 1801. In 1719, with the king's consent, a bill for limiting the power of the sovereign of creating peers, was introduced into the lords and twice passed, but twice rejected by the commons.—Scotland elects 16 representative peers, and Ireland, 28 temporal peers for life. The house of lords in Oct. 1905, consisted of 3 princes of the blood, 2 archbishops, 22 dukes, 23 marquises, 122 earls, 36 viscounts, 317 barons, and 24 bishops; in all, 549. The valuable "Constitutional History of House of Lords," by L. O. Pike, was published in 1894. Sir Wm. Charles' "Crusade against the Constitution: a vindication of the House of Lords," published 1896.

\* Peers of England are free from all arrests of debts, as being the king's hereditary counsellors; therefore a peer cannot be outlawed in any civil action, and no attachment lies against his person; but execution may be taken upon his lands and goods. For the same reason, they are free from all attendance at courts leet or sheriffs' turns; or, in case of a riot, from attending the *peace comitalus*. He can act as a justice of the peace in any part of the kingdom. See *Baron, Earl*, &c.

He died in 1868. A bill for creating life peerages was read a second time in the lords, 27 April, 1869, but afterwards rejected.

**LORETTO**, near Ancona, Italy. Here is the *Casa Santa*, or Holy House, in which it is pretended the Virgin Mary lived at Nazareth, and said to have been carried by angels into Dalmatia from Galilee in 1291, and brought here a few years after. The lady of Loretto, gaudily dressed, stands upon an altar holding the infant Jesus in her arms, surrounded with gold lamps. Loretto was taken by the French in 1797; the holy image, which had been carried to France, was brought back with pomp, 5 Jan. 1803.

**L'ORIENT** (W. France). Lord Bridport off this port defeated the French fleet, 23 June, 1795. The loss of the French was severe: that of the British inconsiderable. — The French flag-ship, *L'ORIENT*, blew up during the battle of the Nile, 1 Aug. 1798. Admiral Bruys and about 900 men perished. Strike and riot, 4, 5 Aug. 1903.

**LORRAINE** (Lotharingia), formerly a French now a German province, became a kingdom under Lothaire (son of the emperor Lothaire I.) about 855; and was divided at his death, in 869, part of it being made a duchy. From the first hereditary duke, Gerard, nominated by the emperor Henry III. in 1048, descended the house of Lorraine, represented now by the emperor of Austria, whose ancestor, the empress Maria Theresa, married in 1736 Francis formerly duke of Lorraine, then of Tuscany. Lorraine, given to the dethroned king of Poland, Stanislaus I., for life, was, at his death in 1766, united to France; see *Nancy*. Lorraine was the seat of war in Aug. 1870, and about the fifth part, including Metz and Thionville, was annexed to Germany at the peace, 26 Feb. 1871.

**LOS ISLANDS**, see *Sierra Leone*, 8 April, 1905.

**LOTS**. Casting lots, as an appeal to God, was sacred among the Jews, *Proverbs* xvi. 33. It was employed in the division of the land of Canaan, about 1444 B.C., by Joshua (xiv.), and in the election of Matthias the apostle, A.D. 33, *Acts* i. — Lots for life or death have been frequently cast. For an instance, see *Wales*, 1649, note.

**LOTTERIES** are said to have originated in Florence about 1530, and to have been legalised in France in 1539, and soon became common. They were prohibited by pope Benedict XIII. (1724-30), and sanctioned by Clement XII. (1730-40). See *Art Union* under *Arts and Paris* (exhibition 1889).

The first mentioned in English history took place, day and night, at the western door of St. Paul's cathedral. It contained 40,000 "lots" at 10s. each lot, the profits were for repairing the harbours, and the prizes were pieces of plate,

This sentence was confirmed by Mr. Justice Stirling in the Chancery division, in the case of Barclay and others v. Pearson (in relation to *Pearson's Weekly*), and he decided that the 23,628*l.* which had been paid into court, should be returned to Mr. Pearson, to be distributed by him to the claimants, to whom the court could give no help, as the affair was illegal, 9 Feb. 1893. Among its vicars were Whiston, the famous mathematician and translator of "Josephus," and Dr. Potter, primate of all England. In 1349, 1547, 1579 and 1603, Lowestoft was visited by plague. During the civil war Cromwell, in 1643, occupied the town. It was partially destroyed by a great fire, 1644. The Dutch were defeated in a naval engagement off the coast, losing 18 ships, 3 June, 1665. On 14th June, 1736, George II. landed at Lowestoft on his return from Hanover. Lübeck was declared a free imperial city about 1226; but was frequently attacked by the Danes. The French took it by assault, 6 Nov. 1806, and Napoleon incorporated it with his empire in 1810. On his fall in 1814 it became once more a free imperial city. It joined the North German confederation 18 Aug. 1866. It dates from the 8th century, and was subject to the abbots of Murbach, who surrendered it to the house of Hapsburg. It was taken by the French in March, 1798, and was for a short time capital of the Helvetic republic; which, as the focus of insurrection against the French, was suppressed Oct. 1802. **LUCIFER MATCHES** came into use about 1834. Friction matches were invented by Walker of Stockton-on-Tees, 1829. In March, 1842, Mr. Reuben Partridge patented machinery for manufacturing the splints. In 1845, Schrötter of Vienna produced his amorphous phosphorus (by heating ordinary phosphorus in a gas which it cannot absorb), by the use of which lucifers are rendered less dangerous, and the manufacture less unhealthy. *Phosphoros* (Greek) and *lucifer* (Latin), both signify *light-bearer*.

Mr. Lowe's proposed tax on lucifers (with "*ex luce lucellum*" on the box) was much opposed, and withdrawn, April, 1871. For their exertions, a drinking fountain at Bow was inaugurated as a memorial to Bryant & May, 5 Oct. 1872. The match manufacture was made a monopoly in France in Oct. 1872, for 750,000.

Skirmish with the military there, 29 Jan. 1812. Serious riots occurred again in 1814; and numerous bodies of unemployed artisans committed great excesses in 1816 *et seq.* Several of these Luddites were tried and executed, 1813 and 1818; see *Derby*.

TREATMENT OF THE INSANE.

Till the end of the last century lunatics were treated with cruel severity; see Conolly "On the Treatment of the Insane," 1856.

The insane were exhibited at Bethlem as a show for 1d. or 2d. till

Enlightened principles of treatment were introduced by Wm. Tuke, at the Society of Friends "Retreat," at York, and by Pinel, at the Bicêtre Paris, with very great success

Esquirol succeeds Pinel, and strongly recommends instruction in the management of mental disorders

Exposure of enormous cruelties in the Bethlem hospital

This led to gradual improvements, and at last to the total abolition of mechanical restraints at a Lincoln, 1837; and at Hanwell Asylum (under the superintendence of Dr. John Conolly) and at other places

The marbles brought from Lycia by Sir Charles Fellows were deposited in the British Museum, 1840-46.

### LYCURGUS, see *Laws*.

**LYDIA**, or *Mæonia*, an ancient kingdom in Asia Minor; the early history wholly mythical. Of a long dynasty of kings, the last was Croesus, "the richest of mankind." The coinage of gold and silver money, and other useful inventions, are ascribed to the Lydians. *Æsop*, the fabulist, *Alcman*, the early lyric poet, *Thales of Miletus*, *Anaximenes*, *Xenophanes*, *Anacreon of Teos*, *Heraclitus of Ephesus*, &c., flourished in Lydia and Greece, from the 7th century B.C.

In 1654, *Glisson* ascribed to these vessels the function of absorption; and their properties were studied by *Wm.* and *John Hunter*, *Monro*, *Hewson*, and other great anatomists.

**LYNCH LAW**, punishment inflicted by private individuals, independently of the legal authorities. The origin of the term is doubtful; the practice has been attributed to *James Lynch Fitz-Stephen*, warden of *Galway*, about 1526, to *Lynch*, a farmer in *Virginia*, and to *Lynch*, a person sent to *America* to suppress piracy, 1687-8. "Judge *Lynch*" is thought by some to be a mythical person.

**LYRE.** Its invention is ascribed to the Grecian  
 Hermes (in Latin Mercury), who, according to  
 Homer, gave it to Apollo, the first that played upon  
 it with method, and accompanied it with poetry.  
 The invention of the primitive lyre, with three  
 strings, is ascribed to the first Egyptian Hermes.  
 It is said that Terpander added several strings to  
 the lyre, making the number seven, 673 B.C., and  
 that Phrynis, a musician of Mitylene, added two  
 more, making nine, 438 B.C.

## M.

**MACADAMISING**, a system of road-making invented by Mr. John Macadam, and published by him in an essay, in 1819, having practised it in Ayrshire. He prescribed stones to be broken to six ounces weight, and the use of clean flints and granite clippings. He received 10,000*l.* from parliament; was appointed surveyor-general of the metropolitan roads in 1827, and died in 1836; see *Roads*.

**MACAO** (in Quang-tong, S. China) was given to the Portuguese as a commercial station in 1586 (in return for their assistance against pirates), subject to an annual tribute, which was remitted in 1886. Here Camoens composed part of the "Lusiad." The abuses of the Coolie trade by the Portuguese led to its abolition here by the British and Chinese governments in 1873. Outbreak of plague reported, 23 April, 1895.

**MACARONI**. This name, given to a poem by Theophilus Folengo, 1509, continues to designate trifling performances, as buffoonery, puns, anagrams, "wit without wisdom, and humour without sense." His poem was so called from a nutritious preparation of wheat-flour in tubes and threads. These poems, in Italy and France, gave rise to *Macaroni academies*, and in England to *Macaroni clubs* (about 1772), when everything ridiculous in dress and manners was called "Macaroni."

**MACCABEES**, a name of the Asmonæans, who commenced their career during the persecution of Antiochus Epiphanes, 167 B.C. Mattathias, a priest, resisted the tyranny; and his son, Judas Maccabæus, defeated the Syrians in three battles, 166, 165 B.C.; but fell in an ambush, 161 B.C. His brother Jonathan made a league with the Romans and Lacedæmonians, and after an able administration was treacherously killed at Ptolemais by Tryphon, 143 B.C. His brother and successor, Simon, was also murdered, 135 B.C. John Hyrcanus, son of Simon, succeeded. His son Judas, called also Aristobulus, took the title of king, 107 B.C. The history of the Maccabees is contained in five books of that name, two of which are included in our Apocrypha. Four are accounted canonical by the Roman Catholic church; none by Protestant communions.

The magnificent Maccabees chapel at Geneva, founded in 1415, by the cardinal Jean de Brogner, president of the council of Constance and the place of his sepulchre. The building, much injured and desecrated at the time of the Reformation, was finely renovated in 1881 and fitted up as a museum.

**MCCARTHYITES**, a name given to the Anti-Parnellites, see *Parnellites*, Dec. 1890.

**MACCLESFIELD**, Cheshire, was incorporated in 1260, disenfranchised in 1885. The church of St. Michael was founded by queen Eleanor in 1278; the grammar-school in 1502. Population, 1881, 37,514; 1891, 36,009; 1901, 34,634.

**MACDONALD AFFAIR**, see *Prussia*, 1861.

**MACE** a weapon anciently used by the cavalry of most nations, was originally a spiked club, hung at the saddle-bow, and usually of metal. Maces were also early ensigns of authority borne before officers of state, the top being made in the form of an open crown, and commonly of silver gilt. The

lord chancellor and speaker of the house of commons have maces borne before them. Edward III. granted to London the privilege of having gold or silver maces carried before the lord mayor, sheriffs, aldermen, and corporation, 1354. It was with the mace usually carried before the lord mayor on state occasions, that Walworth, lord mayor of London, is said to have knocked the rebel Wat Tyler off his horse, for rudely approaching Richard II., a courtier afterwards despatching him with his dagger, 15 June, 1381. Cromwell, entering the house of commons to disperse its members and dissolve the parliament, ordered one of his soldiers to "take away that bauble," the mace, which was done, and the doors of the house locked, 20 April, 1653.

**MACEDON** (N. Greece). The first kingdom is said to have been founded by Caranus, about 761 B.C. It was successively under the protection of Athens, of Thebes, and Sparta, until the reign of Philip, the father of Alexander the Great, who by his political wisdom and warlike exploits made it a powerful kingdom, and paved the way for his son's greatness.

**MADEIRA**, an island, N. W. coast of Africa, discovered, it is said, in 1344, by Mr. Macham, an English gentleman, or mariner, who fled from France for an illicit amour. He was driven here by a storm, and his mistress, a French lady, dying, he made a canoe, and carried the news of his discovery to Pedro, king of Aragon, which occasioned the report that the island was discovered by a Portuguese, 1345. It is asserted that the Portuguese did not visit this island until 1419 or 1420, or colonise it until 1431. It was taken by the British in July, 1801; and again by admiral Hood and general Beresford, 24 Dec. 1807, and retained in trust for the royal family of Portugal, who had emigrated to the Brazils. It was restored to the Portuguese in 1814. Since 1852 the renowned vintages here have been almost totally ruined by the vine disease (*oidium*). Population, 1882, 133,955; 1900, 150,528.

**MADRIGAL**, an unaccompanied song for three or more voices, of which fine examples are by English composers. Madrigals, invented in the Netherlands, were adopted in Italy, where fine specimens were produced. Many were published by Morley, 1594; Weelkes, 1597; Wilbye, 1598; and Bennet, 1599. The Madrigal Society in London began in 1741. English Glee and Madrigal Union founded in 1851. Rimbault's "Bibliotheca Madrigalium" published 1847. The madrigal, "Summer is i cumen in" is attributed to the 13th or 14th century.

**MAESTRICHT** (Holland), the ancient *Tractum ad Mosam*, the capital of Limburg. It revolted from Spain, and was taken by the prince of Parma in 1579, when a dreadful massacre took place. In 1632, the prince of Orange reduced it after a memorable siege, and it was confirmed to the Dutch in 1648; Louis XIV. took it in 1673; William, prince of Orange, invested it in vain in 1676; but in 1678 it was restored to the Dutch. In 1748 it was besieged by the French, who were permitted to take possession of the city on condition of its being restored at the peace then negotiating. In Feb. 1793, Maestricht was unsuccessful.

fully attacked by the French, but they became masters of it, Nov. 1794. In 1814 it was made part of the kingdom of the Netherlands, and now belongs to Holland. Population, 1891, 32,225; 1900, 34,182.

**MAFIA**, a secret terrorist murderous society in Sicily, comprising all classes; became prominent in 1860. It is opposed to the Camorra. Efforts for the suppression of both were made by the government in 1874-5. Murder trials (see *Italy*), Oct. 1901-July, 1902. See *New Orleans*, 1890-95.

**MAGAZINE RIFLES**, see under *Fire-arms*.

**MAGDALA**, a very strong place in Abyssinia (which see). On Good Friday, 10 April, 1868, the troops of the emperor Theodore attacked the first brigade of the British army under sir Robert Napier, and were repulsed with great slaughter. On the next day all the European prisoners were given up, but Theodore himself refused to surrender; and on Easter Monday, 13 April, Magdala was stormed, and Theodore himself killed—it is said by his own hand.—British loss, 2 killed; 20

wounded; Abyssinian loss, about 500 killed and wounded out of about 5000. Magdala was burnt to the ground by the British, 17 April, 1868.

**MAGDALENS AND MAGDALENETTES**, communities of nuns. The order of penitents of St. Magdalen was founded 1272, at Marseilles. The convent of Naples was endowed by queen Sancha, 1324. That at Metz was instituted in 1452. At Paris, 1492. The Magdalen at Rome was endowed by pope Leo X., in 1515, and favoured by Clement VIII. in 1594. The Magdalen hospital, London, was founded in 1758, under the direction of Dr. Dodd. The asylum in Dublin was opened in June, 1766.

**MAGDEBURG** (Prussia). The archbishopric was founded about 967. The city suffered much during the religious wars in Germany. It was besieged and taken by the elector Maurice, Nov. 1550, and Nov. 1551; blockaded for seven months by the imperialists, under Wallenstein, in 1629; and barbarously sacked by Tilly on 10 May, 1631. It was given to Brandenburg in 1648; was taken by the French, 8 Nov. 1806; annexed to the kingdom of Westphalia, 9 July, 1807; restored to Prussia, May, 1813. Valuable fine art collection burnt 6 April, 1891. Population, 1890, 202,325; 1900, 229,663.

The *Magdeburg Experiment* is shown by means of a hollow sphere, composed of two hemispheres, fitting air-tight. When the air is exhausted by the air-pump, the hemispheres are held together by the pressure of the atmosphere, and require great force to separate them. The apparatus was suggested by Otto von Guericke, the inventor of the air-pump. He died in 1686. Braude.

**MAGELLAN, STRAITS OF** (connecting the Atlantic and Pacific oceans), was passed by Fernando de Magalhaens (Magellan), a Portuguese, on 27 Nov. 1520. He gave the latter ocean its name on account of its calmness. Magellan completed the first voyage round the world, with a fleet of discovery fitted out by the emperor Charles V., but was killed in 1521. The Spaniards had a fort here, called Cape Famine, because the garrison perished from want.

**MAGENTA**, a small town in Lombardy, near which the French and Sardinians defeated the Austrians, 4 June, 1859. The emperor Louis Napoleon commanded, and he and the king of Sardinia were in the thickest of the fight. It is said that 55,000 French and Sardinians, and 75,000 Austrians were engaged. The former are asserted to have lost 4000 killed and wounded, and the Austrians 10,000, besides 7000 prisoners. The French generals Espinasse and Clere were killed. The arrival of general MacMahon during a deadly struggle between the Austrians and the French, greatly contributed to the victory. The contest near the bridge of Buffalora was very severe. The Austrians fought well, but were badly commanded. The emperor and king entered Milan on 8 June following; MacMahon and Regnault d'Angely were created marshals of France. A monument erected here in memory of the slain was solemnly inaugurated 4 June, 1872.—The red dye, rosaniline, obtained by chemists from gas-tar, is termed *magenta*; see *Aniline*.

**MAGI**, an order of priests and teachers among the ancient Medes and Persians, with much political power. One of them who on the death of Cambyses asserted that he was Smerdis, a son of Cyrus, and claimed the throne of Persia, was deposed by Darius Hystaspes, 521 B.C., and a massacre of the Magi followed. They retained their religious position

till the later Roman empire. The constitution of the order is traditionally assigned to Zoroaster, the Zarathustra of the Zendavesta, whose time and very existence are uncertain, the 6th century B.C. being mentioned. He is said to have taught the knowledge of Ormuzt, the supreme good principle, to the Magi, whom he classified as learners, masters, and perfect scholars, the possessors of all spiritual power, and the science of the age, see *Parsees*. The name Magi has been applied to the "wise men" of *Matt. ii.*, and the Parsees at Bombay are descendants of the Guebres or fire-worshippers.

**MAGIC**, see *Alchemy, Witchcraft, &c.* The invention of the MAGIC LANTERN is ascribed to Roger Bacon, about 1260, but more correctly to Athanasius Kircher, who died 1680. Sir David Salomons, in a discourse at the Royal Institution on "Optical Projection," exhibited an arrangement of the magic lantern, in which by the use of lenses magnifying up to 4,500 diameters, he stated that he was enabled to magnify a postage stamp to the size of 2½ acres, 26 Feb. 1892. See Godwin's "Lives of the Necromancers," 1834, and Eunnemoser's "History of Magic," translated by W. Howitt, 1854.

**MAGISTRATES**, see *Justices*. Stipendiary borough magistrates may be appointed by 5 & 6 Will. IV. c. 76, 1853; and by 26 & 27 Vict. c. 97, 1863. The present arrangement of metropolitan magistrates (the chief sitting at Bow-street) was made by acts of parliament in 1792 and 1839. Eleven courts were appointed in 1840. Their salaries raised from 25 March, 1875. Henry Fielding, the novelist, was acting magistrate for Westminster and at Bow-street.

**MAGNA CHARTA**. Its fundamental parts were derived from Saxon charters, continued by Henry I. and his successors. On 20 Nov. 1214, the archbishop of Canterbury and the barons met at St. Edmundsbury. On 6 Jan. 1215, they presented their demands to king John, who deferred his answer. On 19 May they were censured by the pope. On 24 May they marched to London, and the king was compelled to yield. The charter was sealed by John at Runnymede, near Windsor, 15 June, 1215. It was many times confirmed, by Henry III. and his successors. This last king's grand charter was granted in 1224, and was assured by Edward I.; see *Forests*. The original MS. charter is lost. The finest MS. copy, which is at Lincoln, was reproduced by photographs in the "National MSS." published by government, 1865.

**MAGNA GRÆCIA**, the independent states founded by Greek colonists in South Italy, Sicily, &c. Cumæ, in Campania, is said to have been founded in 1034 B.C., Pandosia and Metapontum in 774 B.C. These states were ruined through siding with Hannibal when he invaded Italy, 216 B.C.

**MAGNANO** (N. Italy). Here Scherer and a French army were defeated by the Austrians under Kray, 5 April, 1799.

**MAGNESIA** (Asia Minor). Here Antiochus the great, king of Syria, was defeated by the

Scipios, 190 B.C.—*Magnesia alba*, the white alkaline earth used in medicine, was in use in the beginning of the 18th century. Its properties were developed by Dr. Black in 1755.

**MAGNESIUM**, a metal first obtained from magnesia by sir Humphry Davy in 1808, and since produced in larger quantities by Bussy, Deville, and especially by Mr. E. Sonstadt, in 1862-4. Its light when burnt is very brilliant, and is so rich in chemical rays that it may be used in photography. Lamps made for burning magnesium wire, were employed by the excavators of the tunnel through Mount Cenis. By its light photographs of the interior of the Pyramids were taken in 1865. Larkin's magnesium lamp (in which the metal is burnt in the form of a powder) was exhibited at the Royal Institution on 1 June, 1866, and before the British Association at Nottingham in Aug. 1866.

**MAGNETISM**. The attractive power of the loadstone or magnet was early known, and is referred to by Homer, Aristotle, and Pliny; it was also known to the Chinese and Arabians. The Greeks are said to have obtained the loadstone from Magnesia in Asia, 1000 B.C. Roger Bacon is said to have been acquainted with its property of pointing to the north (1294). The invention of the mariner's compass is ascribed to Flavio Gioia, a Neapolitan, about 1310; but it was known in Norway previous to 1266; and is mentioned in a French poem, 1150. In the Royal Institution, London, is a magnet by Logeman, of Haarlem, constructed on the principles of Dr. Elias, which weighs 100 lb. and can sustain 430 lb. Hecker, of Nuremberg, constructed a magnet weighing 36 grains, capable of sustaining 146 times its own weight. This was exhibited in 1851, also at the Royal Institution. Sir Wm. Thomson's mariner's compass produced, 1872

**MAGNETO-ELECTRICITY**, the discovery of professor Faraday; see under *Electricity*. Magneto-electricity has been applied to telegraphic and to lighthouse purposes. The South Foreland lighthouse, near Dover, was illuminated by the magneto-electric light in the winter of 1858-9 and 1859-60 (the light removed to Dungeness in 1861), the Lizards, by Dr. C. **MALTA** (formerly Melita), an island in the Mediterranean, held successively by the Phœnicians, Carthaginians, and Romans, which last conquered it, 259 B.C. The apostle Paul was wrecked here, A.D. 62. (*Acts* xxvii., xxviii.) Malta was taken by the Vandals, 534; by the Arabs, 870; and by the Normans from Sicily, 1090. With Sicily it became successively part of the possessions of the houses of Hohenstaufen, of Anjou (1266), and of Aragon (1260). In 1530 Charles V. gave it to the Knights Hospitallers, who defended it most courageously and successfully, in 1551 and 1565, against the Turks, who were obliged to abandon the enterprise after the loss of 30,000 men. The island was taken by Bonaparte in the outset of his expedition to Egypt, 12 June, 1798. He found in it 1200 pieces of cannon, 200,000 lbs. of powder, two ships of the line, a frigate, four galleys, and 40,000 muskets, besides an immense treasure collected by superstition; and 4500 Turkish prisoners, whom he set at liberty. Malta surrendered to the British under Pigot, 5 Sept. 1800. At the peace of Amiens it was stipulated that it should be restored to the knights. The British, however, retained possession, and the war recommenced between the two nations; but by the treaty of Paris, in 1814, the island was guaranteed to Great Britain. A legislative constitution was established in 1849; and after various changes was replaced by a more popular one proclaimed 22 Dec. 1887. *La Valetta*, the capital, was founded in 1557 by the grand master La Valetta, and completed and occupied by the knights, 18 Aug. 1571. **MALTA, KNIGHTS OF.** A military religious order, called also Hospitallers of St. John of Jerusalem, Knights of St. John, and Knights of Rhodes. Some merchants of Malfi, trading to the Levant, obtained leave of the caliph of Egypt to build a house for those who came on pilgrimage to Jerusalem, and whom they received with zeal and charity, 1048. They afterwards founded a hospital for the reception of pilgrims, from whence they were called Hospitallers (Latin, *hospes*, a guest). The military order was founded about 1099; confirmed by the pope, 1113. In 1119 the knights defeated the Turks at Antioch. After the Christians had lost their interest in the East, and Jerusalem was taken, the knights retired to Acre, which they defended valiantly in 1290. John, king of Cyprus, gave them Limisso in his dominions, where they stayed till 1310, in which year they took Rhodes, under their grand master De Vallaret, and the next year defended it under the duke of Savoy against an army of Saracens. The story that his successors have used F. E. R. T. (*Fortitudo ejus Rhodum tenuit*, or his valour kept Rhodes) for their device is much doubted. From this they were also called *knights of Rhodes*; but Rhodes being taken by Solymann in 1522, they retired into Candia, thence into Sicily. Pope Adrian VI. granted them the city of Viterbo for their retreat; and in 1530 the emperor Charles V. gave them the isle of Malta. The order was suppressed in England in 1540; restored in 1557; and again suppressed in 1559. St. John's Gate, Clerkenwell, a relic of their possessions, still exists. The emperor Paul of Russia declared himself grand master of the order in June, 1799. After the death of the grand master, Tommasi di Contara, in 1805, the order was governed by a lieutenant and a college at Rome, till Pope Leo XIII. made count Ceschi di Santa Cisca (lieutenant since 14 Feb. 1871) grand master, 28 March, 1879. The knights sent a hospital establishment into Bohemia during the war in 1866, which afforded great relief to the wounded and sick.

They advanced one of their own corps to the throne of Egypt, May, 1260, and continued to do so until it became a Turkish province, in 1517, when the boys took them into pay, and filled up their ranks with renegades from

various countries. On the conquest of Egypt by Bonaparte, in 1798, they retreated into Nubia; but, assisted by the Arnauts, reconquered Egypt from the Turkish government. In 1804, Napoleon embodied some of them in his guard. On 1 March, 1811, they were decoyed into the power of the Turkish pacha, Mehemet Ali, and slain at Cairo.

**MAMERTINI**, sons of Mamers or Mars, were Campanian soldiers of Agathocles. They seized Messina in Sicily, in 281, B.C., and when closely besieged by the Carthaginians, and Hiero of Syracuse, in 264, they implored the help of the Romans, which led to the first Punic war.

**MAMMOTH**, an extinct species of elephant (*Elephas primigenius*), the remains of which in the recent deposits of Northern Europe and Asia are sufficiently common to afford a valuable supply of fossil ivory. The first entire mammoth recorded is that recovered from the ice near the mouth of the Lena in 1806. Remains of this animal found at Harwich, in 1803, many disinterred or washed out in great thaws in more recent years at places in Europe, Asia, and America. Mammoth, Mastodon, and Dinotherium are the three most prominent types of the fossil Proboscidea in the Tertiary deposits.

**MAMMOTH CAVE**, Kentucky, 10 miles in length, consists of numerous grottos, rivers, cataacts, and avenues, some of the last being covered with the most beautiful crystals. The temperature of the cave is about 54° Fahr. "The Mammoth Cave of Kentucky," by H. C. Hovey and R. E. Call, published 1897.

**MAN, ANTIQUITY OF.** In 1836, M. Boucher de Perthes found some rude flint implements, which he believed to be of human manufacture, mingled with bones of extinct contemporary animals, in the old alluvium near Abbeville in Picardy, France, and also in 1847, near Amiens. Similar flints have since been found in Sicily by Dr. Falconer, at Brixham by Mr. Pengelly, and in various parts of the world, demonstrating the remote antiquity of the human race.

Some burnt bricks found in the Nile are considered to be 20,000 years old, and some bones found in lacustrine deposits in Florida, 30,000 years old.

**MAN, ISLE OF**, was subdued by Edwin, king of Northumberland, about 620; by Magnus of Norway, 1098; by the Scots, 1266; occupied by Edward

at the wish of the inhabitants 1290; recovered by the Scots in 1313; but taken from them by Montacute, afterwards earl of Salisbury, to whom Edward III. gave the title of king of Man, in 1343. It was afterwards subjected to the earl of Northumberland, on whose attainer Henry IV. granted it in fee to Sir John Stanley, 1406. It was taken from this family by Elizabeth, but was restored in 1610 to the earl of Derby, through whom it fell by inheritance to the duke of Athol, 1735. He received 70,000*l.* from parliament for all his rights in 1765; and the nation was charged with the further sum of 132,944*l.* for the purchase of his remaining interest in the revenues of the island in Jan. 1829. The countess of Derby held the isle against the parliament forces for a time in 1651. The queen's landing pier (cost 46,400*l.*) inaugurated by the lieutenant-governor, H. B. Loch, 1 July, 1872. The bishop has no seat in the house of lords; but Lord Auckland (bishop, 1847-54) sat by right of his barony. Present income 2,000*l.*

The Tynwald, an independent legislative body, consists of two branches—1. The governor and council; 2. The house of Keys; their acts receiving the royal assent. The house of Keys was formerly self-elective; election by the people every seventh year was established by act of parliament, 1866; the property qualification for members abolished; household suffrage was granted in towns and suffrage conferred on women by royal assent in 1881. New Customs Act passed in . . . 1887

**MANASSAS JUNCTION** (Virginia, United States), an important military position, where the Alexandria and Manassas Gap railways meet, near a creek named **BULL RUN**. 1. It was held by the confederates in 1861, when they were attacked by the federal general Irwin McDowell. He began his march from Washington on 16 July, and gained some advantage on the 18th at Centreville. On the 21st was fought the *first* battle of Bull Run. The federals, who began the fight, had the advantage till about three o'clock p.m., when the confederate general Johnston brought up reinforcements, which at first the federals took for their own troops. After a brief resistance, the latter were seized with sudden panic, and, in spite of the utmost efforts of their officers, fled, abandoning a large quantity of arms, ammunition, and baggage. The confederate generals Johnston and Beauregard did not think it prudent to pursue the fugitives, who did not halt till they arrived at Washington. The federal army is said to have had 481 killed, 1011 wounded, 1216 missing. The loss of the confederates was stated to be about 1500.—In March, 1862, when the army of the Potomac, under general McClellan, marched into Virginia, they found that the confederates had quietly retreated from the camp at Manassas. 2. On 30 Aug. 1862, this place was the site of another great battle between the northern and southern armies. In August, general "Stonewall" Jackson, after compelling the federal general Pope to retreat, defeated him at Cedar mountain on the 9th, turned his flank on the 22nd, and arriving at Manassas repulsed his attacks on the 29th. On the 30th general R. E. Lee (who had defeated general McClellan and the invading northern army before Richmond, 26 June to 1 July) joined Jackson with his army, and Pope received reinforcements from Washington. A desperate conflict ensued, which ended in the confederates gaining a decisive victory, compelling the federals to a hasty retreat to Centreville, where they were once more routed, 1 Sept. The remains of their army took refuge behind the lines of Washington on 2 Sept. Pope was at once superseded, and McClellan resumed the command to march against the confederates, who had crossed the Potomac and entered Maryland; see *United States*.

**MANCHESTER** (Lancashire), in the time of the Druids, was one of their principal stations, and had the privilege of sanctuary attached to its altar, in the British language *Meyne*, a stone. It was one of the seats of the Brigantes, who had a castle, or stronghold, called *Mancinion*, or the place of tents, near the confluence of the rivers Medlock and Irwell. The site of this, still called the "Castle Field," was, about 79, selected by the Romans as the station of the *Cohors Prima Frisiorum*, and called by them *Mancinium*; hence its Saxon name *Manceastre*, from which its modern appellation is derived. *Lewis*. Manchester constituted a harbour and port, 22 Dec. 1893. Population 1903, 553,486.

The French (1838) and British (1861) have missionary stations there. Population about 21,000,000. The Japanese invaded Manchuria during the war of 1894-5. Capt. Frank E. **MANERU**, near Puente de la Reyna Navarre. Here took place a conflict between the republicans, under Moriones, and the Carlists, under Otto; both claimed a victory; 6 Oct. 1873.

**MANGANESE.** Black oxide of manganese, long used to decolorize glass, and called *Magnesia nigra*, was formerly included among the ores of iron. Its distinctive character was proved by the researches of Pott (1740), Kaim and Winterl (1770), and Scheele and Bergmann (1774); it was first eliminated by Gahn. Manganese combined with potassium is called mineral chameleon, from its rapid change of colour under certain circumstances. Forchhammer employed it as a test for the presence of organic matter in water; and Dr. Angus Smith, successfully applied this test to air in 1858. The oxide is the important ingredient in Condy's "disinfecting fluid." Manganese bronze is a metal produced by Mr. P. M. Parsons, inventor of white brass, 1876. Manganese steel produced by Messrs. P'feil & Co. 1887.

**MANICHEANS**, a sect founded by Manes, in Persia, about 261. It spread into Egypt, Arabia, and Africa. A rich widow, whose servant Manes had been, left him much wealth, after which he assumed the title of Apostle, or envoy of Jesus Christ, and announced that he was the paraclete or comforter that Christ had promised to send. He maintained two principles, the one good he called light, the other bad he called darkness. He rejected the Old Testament, and composed a system of doctrine from Christianity and the dogmas of the ancient fire-worshippers. Sapor, king of Persia, believed in him at one time; but afterwards banished him. He was burnt alive by Bahram or Varanes, king of Persia, in 277. His followers dispersed, and several sects sprang from them.

**MANILLA** (or **MANILA**) (built about 1573), capital of the Philippine isles, a great mart of Spanish commerce. Manilla was taken by the English, 6 Oct. 1762, when the archbishop engaged to ransom it for about a million sterling; never wholly paid. Manilla has suffered greatly by earthquakes. It is stated that nearly 3000 persons perished by one in 1645. In Sept. 1852, the city was nearly destroyed, and on 3 July, 1863, about a thousand lives were lost. See *Earthquakes* 1852, 1863, 1880. **MANIPUR** (Manipore), a small native state, N.E. India, adjoining Assam and Burmah; population, 1881, 221,070; army about 5,000.

The state was for long protected by the British from the attacks of the Burmese. In 1834, Gumbheer Singh, the restored rajah, died, and was succeeded by his son, Chandra Kirzi Singh, two years old. The regent, Nar Singh, a relative, usurped the government, and ruled till his death in 1850, when the young rajah was restored; a British resident being afterwards placed in the capital, with good effect. Much trouble was given by rival members of his family till 1866; he died in 1885 or 1886. He left eight sons, who formed opposing parties. The eldest, Sura Chandra Singh, became maharajah, and appointed his eldest brother, Kula Chandra Dhuya Singh, Jubraj, or heir-apparent, afterwards turned regent, a weak, incapable man. In Sept. 1890, his brother, Takendraj Singh, the senaputti, or commander-in-chief, dethroned the maharajah and set up the jubraj in his place. The maharajah retired to Calcutta.

On 21 Feb. 1891, Mr. James W. Quinton, chief commissioner of Assam, was directed to proceed with a sufficient force to Manipur, to recognise the regent, and to remove the senaputti. He entered Manipur 22 March, with 470 men and officers, civil and military, and was well received by the regent and the senaputti, but could not succeed in getting the latter to attend a durbar or court. Mr. Quinton as an ultimatum required the surrender of the senaputti, the letter being taken by Mr. F. St. C. Grimwood, political agent, without any result, 23 March. On the 24th, colonel Skene proceeded with 250 men to arrest the senaputti at his house within the fort inclosure, of which they obtained possession after a sharp struggle, during which lieut. Brackenbury was mortally wounded. The senaputti had escaped. About 10 A.M., the Manipuris opened fire on the residency in front, and about noon on the rear, and shelled it. About 4 P.M. the troops were withdrawn from the senaputti's house, and all the force was posted in the residency, which was seriously damaged by artillery about 5 P.M., and the ammunition began to fall short. About 7 P.M. negotiations were re-opened by letter from Mr. Quinton, and the firing ceased, but the conditions offered by the regent could not be accepted. Having been invited by the senaputti halfway between the residency and the palace, Mr. Quinton took with him colonel Skene, Mr. F. St. C. Grimwood, Mr. H. Cossins, and lieut. Simpson, unarmed, and without escort. After a long parley, the party entered the fort and were seen no more, and it was afterwards discovered that they were all killed (beheaded or otherwise). The firing re-commenced about midnight. The ammunition having been greatly reduced, it was decided to retire from the residency, and to march across the country to meet captain Cowley's advancing party. This was done about 2 A.M. on the 25th, the party taking with them 17 wounded, and Mrs. Grimwood, who displayed much judgment, courage, and humanity. There was no serious resistance during the march, but a few skirmishes occurred. About 10 A.M. they met captain Cowley's party, who supplied them with food and other assistance. They continued their march, arriving, on 30 March, at Lakhipur on the Cachar frontier.

Lieut. C. J. W. Grant hearing, on 27 March, of the disaster at Manipur, volunteered to attempt the relief of the British captives, and marched with 80 native soldiers from Tamu in Burmah, 28 March; entrenched himself near Thobal, 31 March; held out against the attacks of the Manipuri army (about 3,000) till 7 April; and resisted negotiations judiciously; only 1 killed. (Lieut. Grant was made major and otherwise honoured.)

About 2,000 Manipuris, entrenched near Tamu, attacked and dispersed by general Graham's party, captain Drury being especially successful, 25 April; three columns under gen. Graham and others from different directions converge at Manipur, which they find totally deserted, the regent, senaputti, and other princes having fled, 26 April; the palace had been blown up; the

heads of Mr. Quinton and his companions were found in the enclosure.

Funeral ceremony was held over the exhumed bodies of Mr. Quinton and his companions, 30 April; general Collett was left in command at Manipur, some of the troops left. The Manipuris returned to their homes, May; the regent and his minister were captured, 8 May, and the senaputti,

23 May, 1891  
The regent, the senaputti, and prince Angao Sena, a younger brother, were tried for rebellion and abetting to murder, and sentenced to death (all appealed). 9-20 June, "  
The sentences of death on the senaputti and the Tongal general, as implicated in the murders, were confirmed. The sentences on the regent and his younger brother commuted to transportation for life to the Andaman Islands; forfeiture of property, announced 10 Aug. The senaputti and the Tongal general hanged at Manipur,

13 Aug. "  
It was decided that Manipur should still be ruled by a native prince, 23 Aug.; and Chura Chand, aged 5, great grandson of Nar Singh, was appointed rajah, 13 Sept.; dignity to be hereditary, subject to the government of India; an annual tribute to be paid; declaration communicated. Oct. "  
Heavy rain, causing destructive floods and loss of life May, 1893

Lieut.-gov., John C. Schultz; succeeded by J. C. Patterson, June, 1895; D. H. McMillan, 1900. A Fenian attack on the colony was suppressed by American troops about 12 Oct. 1871. Several battles were fought with various success in the neighbourhood during the wars of Napoleon I. Kotzebue, the popular dramatist, was assassinated at Mannheim, by Sand, a student of Wurtzburg, 2 April, 1819. Population, 1890, 79,044; 1900, 140,384.

**MANOMETER** (Greek, *manos*, thin), an instrument for measuring the rarity of the atmosphere, gases, and vapours. One is said to have been made by Otto von Guericke about 1660, and the "statical barometer" of Robert Boyle was a simple manometer. Various forms of the apparatus were devised by Ramsden (about 1773), by Roy (1777), by Cazalet (1789), and by Bourdon and others. A manometer was constructed for the investigation respecting the elasticity of steam conducted by Prony, Arago, Dulong, and Girard, 1830.

**MANSOURAH (Lower Egypt)**. Here Louis IX. was defeated by the Saracens and taken prisoner, 5 April, 1250. He gave Damietta and 400,000 livres for his ransom. Mansourah suffered much by cholera, summer, 1883.

**MANTES**, a town in the department of Seine-et-Oise, France, is situated on the river Seine, about 36 miles from Paris. It possesses a handsome Gothic church, and contains other objects of antiquarian interest. Here, while besieging the town, William the Conqueror received the wound that caused his death, 1089.

**MANTINEA** (Arcadia, Greece). Here—(1) Athenians and Argives were defeated by Agis II. of Sparta, 418 B.C. (2) And here Epaminondas and the Thebans defeated the combined forces of Lacedæmon, Achaia, Elis, Athens, and Arcadia, 362 B.C. Epaminondas was killed in the engagement, and Thebes lost its power among the Grecian states. The emperor Adrian built a temple at Mantinea in honour of his favourite Alcinoüs. The town was also called Antigonia. Other battles were fought near it.

**MANTIS**, a genus of remarkable insects, whose forms and colours of their bodies and wings imitate the leaves and twigs that environ them. The praying mantis (*mantis religiosa*) derives its name from the peculiar position of its anterior pair of legs.

**MANTUA** (N. Italy), an Etruscan city, near which Virgil was born, 70 B.C. Mantua was ruled by the Gonzagas, lords of Mantua, from 1328 to 1708, when it was seized by the emperor Joseph I. It surrendered to the French, 2 Feb. 1797, after a siege of eight months; retaken by the Austrians and Russians, 30 July, 1799, after a short siege. After the battle of Marengo (14 June, 1800), the French again obtained possession of it. It was included in the kingdom of Italy till 1814, when it was restored to the Austrians, who surrendered it to the Italians, 11 Oct. 1866, after the peace.

**MANU**, see *Menu*.

**MAORIS**, see *New Zealand*.

**MAPLE-TREE**. The *Acer rubrum*, or scarlet maple, was brought here from N. America, before 1656. The *Acer Negundo*, or ash-leaved maple, before 1688. From the *Acer saccharinum* (introduced here in 1735) the Americans make good sugar.

**MAPS**, see *Charts*, and *Mercator*.

**MARANON**, see *Amazon*.

**MARATHON** (in Attica). Here, on 28 or 29 Sept. 490 B.C., the Greeks, only 11,000 strong, defeated the Persian army amounting to about 110,000. The former were commanded by Miltiades, Aristides, and Themistocles. Among the slain (about 6,000) is said to have been Hippas, who had been expelled from Athens, and was the instigator of the war. The Persian army was forced to retreat to Asia; see *Greece*.

Investigations in 1890 on the presumed site of this battle led to the discovery of vases, and the probable graves of the 102 Athenians who fell.

**MARBLE.** Dipœnus and Scyllis, statues of Crete, were the first artists who sculptured marble, and polished their works; all statues previously being of wood, about 568 B.C. *Pliny*. The edifices or monuments of Rome were constructed of, or ornamented with, fine marble. The ruins of Palmyra are chiefly of white marble. The marble arch, London, erected at Buckingham palace, 1830, was removed to Hyde-park, March, 1851.

**MARBURG** (W. Germany). The cathedral was founded, 1231; and the first Protestant university in 1527. It suffered much during the Seven years' war, 1753-60.

**MARCH**, the first month of the Roman year, until Numa added January and February, 713 B.C. It is said that Romulus gave to this month the name of his supposed father, Mars; though Ovid observes, that the people of Italy had the month of March before the time of Romulus, but placed it differently in the calendar. The year commenced on the 25th of this month till 1753; see *Year*. The March of 1845 and 1886 had much frost and skating.

**MARCHES.** The old boundaries between England and Wales, and England and Scotland. The Lords Marchers of the Welsh borders had viceregal authority; the wardens of the Scotch marches were subordinate officers. These powers were abolished, 1536 and 1689.

**MARCOMANNI**, a people of Southern Germany, expelled the Boii from Bohemia, and, united with other tribes, invaded Italy about 167, but were repelled by the emperors Antoninus and Verus. They were defeated by the legion called, from a fabled miracle, the Thundering Legion, 179; and finally driven beyond the Danube by Aurelian, 271.

**MARENGO** (N. Italy). Here the French army, commanded by Bonaparte, after crossing the Alps into Piedmont, attacked the Austrians, 14 June, 1800; his army was retreating, when the arrival of general Dessaix turned the fortunes of the day. The slaughter on both sides was dreadful. By a treaty between the Austrian general Melas and Bonaparte, signed 15 June, the latter obtained twelve strong fortresses, and became master of Italy.

**MARESCHALS** or **MARSHALS**, in France, were the esquires of the king, and originally had the command of the vanguard to observe the enemy and to choose proper places for its encampment. Till the time of Francis I., in 1515, there were but two marshals, who had 500 livres per annum in war, but no stipend in time of peace. The number was afterwards greatly increased. Napoleon's marshals were renowned for skill and courage; see *Marshal*.

Francis I. of France defeated the duke of Milan and the Swiss, 13, 14 Sept. 1515; above 20,000 men were slain. This conflict has been called the Battle of the Giants.—2. Near here was fought the battle of Pavia (*which see*), 24 February, 1525.—3. After the battle of Magenta, 4 June, 1859, the Austrians entrenched themselves at Malegnano. The emperor sent marshal Baraguay d'Hilliers with 16,000 men to dislodge them, which he did with a loss of about 850 killed and wounded, on 8 June. The Austrians are said to have lost 1400 killed and wounded, and 900 prisoners, out of 18,000 engaged.

**MARINE BIOLOGICAL ASSOCIATION.** See *Biology*.

**MARINER'S COMPASS**, see *Compass*, and *Magnetism*.

**MARINES**, soldiers serving on ship-board, were first established with the object of forming a nursery to man the fleet. An order in council, dated 16 Oct. 1664, authorised 1200 soldiers to be raised and formed into one regiment. In 1684, the third regiment of the line was called the Marine Regiment; but the system of having soldiers exclusively for sea service was not carried into effect until 1698, when two marine regiments were formed. More regiments were embodied in subsequent years; and in 1741 the corps consisted of ten regiments, each 1000 strong. In 1759 they numbered 18,000 men. In the latter years of the French war, ending in 1815, they amounted to 31,400, but there were frequently more than 3000 supernumeraries. The *jollies*, as they are called, frequently distinguished themselves. The "Royal Marine Forces" (so named 1 May, 1802), now comprehend artillery and light infantry. The vote for 1857 was for 16,000 marines, inclusive of 1500 artillery. *P. H. Nicolas*. Strength 1903, 19,579. Marine Engineers' Institution, founded in 1872. **MARINO, SAN**, a republic in central Italy. Its origin is ascribed to St. Marinus, a hermit, who resided here in the 5th century. **MARONITES**, Christians in the East, followers of one Maron in the 5th century; they are said to have embraced the errors of the Jacobites, Nestorians, and Monothelites. About 1180 they numbered 40,000, living in the neighbourhood of mount Libanus, and were of service to the Christian kings of Jerusalem. They were reconciled to the church of Rome soon after. For an account of the massacres of the Maronites in 1860, see *Druses*.

**MAROONS**, a name given in Jamaica to runaway negroes. When the island was conquered from the Spaniards, a number of their negroes fled to the hills and became very troublesome to the colonists. A war of eight years' duration ensued, when the Maroons capitulated on being permitted to retain their free settlements, about 1730. In 1795 they again took arms, but were speedily put down and many were transported. *Brande*.

The tracts appeared about 1586. Some had very singular titles: such as "*An Almand for a Parrat*," "*Bar any Worke for Cooper?*" &c. They were collected and reprinted in 1843.

**MARQUE, LETTERS OF**, see *Privates*.

**MARQUIS**, a dignity, called by the Saxons *markin-reve*, by the Germans *markgrave*, took its original from mark or March, a limit or bound (see *Marches*); the office being to guard or govern the frontiers of a province. Marquis is next in honour to a duke. The first Englishman on whom the title was conferred was the favourite of king Richard II., Robert de Vere, earl of Oxford, created marquis of Dublin, and placed in parliament between the dukes and earls, 1385. James Stewart, second son of James III. of Scotland, was made marquis of Ormond, in 1476, without territories, afterwards earl of Ross.

**MARRIAGE** was instituted by God (*Gen. ii.*), and confirmed by Christ (*Mark x.*), who performed a miracle at the celebration of one (*John ii.*). Matrimonial ceremonies among the Greeks are ascribed to Cecrops, king of Athens, 1554 B.C. See *Ape. Affinity*.

ROYAL MARRIAGE ACT, 12 GEO. III. c. 17, was passed in 1772, in consequence of the marriage of the duke of Gloucester, the king's brother, with the widow of the earl Waldegrave, and of the duke of Cumberland with the widow of colonel Horton and daughter of lord Irham. [By this act, none of the descendants of George II., unless of foreign birth, can marry under the age of 25, without the consent of the king; at and after that age, after twelve months' notice given to the privy council, they may contract such marriage, which shall be good unless both houses of parliament disapprove. The marriage of the duke of Sussex with the lady Augusta Murray, solemnized in 1793, was pronounced illegal, 1794, and the claims of their son, sir Augustus d'Este, declared invalid, by the house of lords, 9 July, 1844. He married lady Cecilia Underwood (afterwards duchess of Inverness), 1831.

H. R. H. the princess Louise was married to the marquis of Lorne by the queen's consent, 21 March, 1871.

HALF MARRIAGE. *Semi-Matrimonium*. Among the Romans concubinage was a legitimate union, not merely tolerated but authorised. The concubine had the name of *semi-conjux*. Men might have either a wife or a concubine, provided they had not both together. Constantine the Great checked concubinage, but did not abolish it. This ancient custom of the Romans was preserved, not only among the Lombards, but by the French when they held dominion in that country. Cujas assures us that the Gascons and other people bordering on the Pyrenean mountains had not relinquished this custom in his time, 1500. The women bore the name of "wives of the second order." *Hennault*. See *Morganatic Marriages*.

DOUBLE MARRIAGES. There are some instances of a husband and two wives (but they are very rare) in countries where polygamy was interdicted by the state. The first Lacedæmonian who had two wives was Anaxandrides, the son of Leon, about 510 B.C. Dionysius of Syracuse married two wives, viz.: Doris, the daughter of Xenetius, and Aristomache, sister of Dion, 398 B.C. It is said that the count Gleichen, a German nobleman, was permitted, under peculiar circumstances, by Gregory IX., in A.D. 1237, to marry and live with two wives. The Mormons practise and encourage polygamy.

FORCED MARRIAGES. The stat. 3 Henry VII. (1487) made the principal and abettors in marriages with heiresses, &c., contrary to their will, equally guilty as felons. By 39 Eliz. (1596) such felons were denied the benefit of clergy. This offence was made punishable by transportation, 1 Geo. IV. (1820). The remarkable case of Miss Wharton, heiress of the house of Wharton, whom captain Campbell married by force, occurred in William III.'s reign. Sir John Johnston was hanged for seizing the young lady, and the marriage was annulled by parliament, 1690.—Edward Gibbon Wakefield was tried at Lancaster, and found guilty of the felonious abdu-

MARONITES, Christians in the East, followers of one Maron in the 5th century; they are said to have embraced the errors of the Jacobites, Nestorians, and Monothelites. About 1180 they numbered 40,000, living in the neighbourhood of mount Libanus, and were of service to the Christian kings of Jerusalem. They were reconciled to the church of Rome soon after. For an account of the massacres of the Maronites in 1860, see *Druses*.

MAROONS, a name given in Jamaica to runaway negroes. When the island was conquered from the Spaniards, a number of their negroes fled to the hills and became very troublesome to the colonists. A war of eight years' duration ensued, when the Maroons capitulated on being permitted to retain their free settlements, about 1730. In 1795 they again took arms, but were speedily put down and many were transported. *Brande*.

The tracts appeared about 1586. Some had very singular titles: such as "An Almand for a Parrat," "Hay any Worke for Cooper?" &c. They were collected and reprinted in 1843.

MARQUESAS ISLANDS (Polynesia) were discovered in 1595 by Mendana, who named them after the viceroy of Peru, Marquessa de Mendoza. They were visited by Cook in 1774, and were taken possession of by the French admiral Dupetit Thouars, 1 May, 1842.

MARQUIS, a dignity, called by the Saxons *markin-reve*, by the Germans *markgrave*, took its origin from *mark* or *March*, a limit or bound (see *Marches*); the office being to guard or govern the frontiers of a province. Marquis is next in honour to a duke. The first Englishman on whom the title was conferred was the favourite of king Richard II., Robert de Vere, earl of Oxford, created marquis of Dublin, and placed in parliament between the dukes and earls, 1385. James Stewart, second son of James III. of Scotland, was made marquis of Ormond, in 1476, without territories, afterwards earl of Ross.

MARRIAGE was instituted by God (*Gen. ii.*), and confirmed by Christ (*Mark x.*), who performed a miracle at the celebration of one (*John ii.*). Matrimonial ceremonies among the Greeks are ascribed to Ccerops, king of Athens, 1554 B.C. See *Agr. Affinity*.
